I.—FIRST VISIT TO ENGLAND.

I HAVE been twice in England. In 1833, on my return from a short tour in Sicily, Italy, and France, I crossed from Boulogne, and landed in London at the Tower stairs. It was a dark Sunday morning; there were few people in the streets; and I remember the pleasure of that first walk on English ground, with my companion, an American artist, from the Tower up through Cheapside and the Strand, to a house in Russell Square, whither we had been recommended to good chambers. For the first time for many months we were forced to check the saucy habit of travellers' criticism, as we could no longer speak aloud in the streets without being understood. The shop-signs spoke our language; our country names were on the door-plates; and the public and private buildings wore a more native and wonted front.

Like most young men at that time, I was much indebted to the men of Edinburgh, and of the Edinburgh Review—to Jeffrey, Mackintosh, Hallam, and to Scott, Playfair, and De Quincey, and my narrow and desultory reading had inspired the wish to see the faces of three or four writers—Coleridge, Wordsworth, Landor, De Quincey, and the latest and strongest contributor to the critical journals, Carlyle; and I suppose if I had sifted the reasons that led me to Europe, when I was ill and was advised to travel, it was mainly the attraction of these persons. If Goethe had still been living, I might have wandered into Germany also. Besides those I have named (for Scott was dead), there was not in Britain the man living whom I cared to behold, unless it were the Duke of Wellington, whom I afterwards saw at Westminster Abbey, at the funeral of Wilberforce. The young scholar fancies it happiness enough to live with people who can give an inside to the world; without reflecting that they are prisoners, too, of their own thought, and cannot apply themselves to yours. The conditions of literary success are almost destructive of the best social power, as they do not leave that frolic liberty which only can encounter a companion on the best terms. It is probable you

right mother-wit, and equality to life, when you crossed sea and land to play bo-peep with celebrated scribes. I have, however, found writers superior to their books, and I cling to my first belief, that a strong head will dispose fast enough of these impediments, and give one the satisfaction of reality, the sense of having been met, and a larger horizon.

On looking over the diary of my journey in 1881, I find nothing to publish in my memoranda of visits to places. But I have copied the few notes I made of visits to persons, as they respect parties quite too good and too transparent to the whole world, to make it needful to affect any prudery of suppression about a few hints of those bright personalities.

At Florence, chief among artists I found Horatio Greenough, the American sculptor. His face was so handsome, and his person so well formed, that he might be pardoned, if, as was alleged, the face of his Medora, and the figure of a colossal Achilles in clay, were idealizations of his own. Greenough was a superior man, ardent and eloquent, and all his opinions had elevation and magnanimity. He believed that the Greeks had wrought in schools or fraternities—the genius of the master imparting his design to his friends, and inflaming them with it, and when his strength was spent, a new hand, with equal heat, continued the work; and so by relays, until it was finished in every part with equal fire. This was necessary in so refractory a material as stone; and he thought art would never prosper until we left our shy jealous ways, and worked in society as they. All his thoughts breathed the same generosity. He was an accurate and a deep man. He was a votary of the Greeks, and impatient of Gothic art. His paper on Architecture, published in 1843, announced in advance the leading thoughts of Mr. Ruskin on the morality in architecture, notwithstanding the antagonism in their views of the history of art. I have a private letter from him—later, but respecting the same period—in which he roughly sketches his own theory. "Here is my theory of structure: A scientific arrangement of spaces and forms to functions and to site; an emphasis of features proportioned to their *graded* importance in function; colour and ornament to be decided and arranged and varied by strictly organic laws, having a distinct reason for each decision; the entire and immediate banishment of all make-shift and make-believe."

Greenough brought me, through a common friend, an invitation from Mr. Landor, who lived at San Domenico di Fiesole. On the 15th May I dined with Mr. Landor. I found him noble and courteous, living in a cloud of pictures at his Villa Gherardesca, a fine house commanding a beautiful landscape.

lance. I do not know whether the imputation were just or not but certainly on this May day his courtesy veiled that haughty mind, and he was the most patient and gentle of hosts. He praised the beautiful cyclamen which grows all about Florence; he admired Washington; talked of Wordsworth, Byron, Massinger, Beaumont and Fletcher. To be sure, he is decided in his opinions, likes to surprise, and is well content to impress, if possible, his English whim upon the immutable past. No great man ever had a great son, if Philip and Alexander be not an exception; and Philip he calls the greater man. In art, he loves the Greeks, and in sculpture, them only. He prefers the Venus to everything else, and, after that, the head of Alexander, in the gallery here. He prefers John of Bologna to Michael Angelo; in painting, Raffaele; and shares the growing taste for Perugino and the early masters. The Greek histories he thought the only good; and after them, Voltaire's. I could not make him praise Mackintosh, nor my more recent friends: Montaigne very cordially—and Charron also, which seemed indiscriminating. He thought Degerando indebted to "Lucas on Happiness" and "Lucas on Holiness!" He pestered me with Southey; but who is Southey?

He invited me to breakfast on Friday. On Friday I did not fail to go, and this time with Greenough. He entertained us at once with reciting half a dozen hexameter lines of Julius Caesar's!—from Donatus, he said. He glorified Lord Chesterfield more than was necessary, and undervalued Burke, and undervalued Soerates; designated as three of the greatest of men, Washington, Phocion, and Timoleon; much as our pomologists, in their lists, select the three or the six best pears "for a small orchard;" and did not even omit to remark the similar termination of their names. "A great man," he said, "should make great sacrifices, and kill his hundred oxen, without knowing whether they would be consumed by gods and heroes, or whether the flies would eat them." I had visited Professor Amici, who had shown me his microscopes, magnifying (it was said) two thousand diameters; and I spoke of the uses to which they were applied. Landor despised entomology, yet, in the same breath, said, "the sublime was in a grain of dust." I suppose I teased him about recent writers, but he professed never to have heard of Herschel, *not even by name*. One room was full of pictures, which he likes to show, especially one piece, standing before which, he said "he would give fifty guineas to the man that would swear it was a Domenichino." I was more curious to see his library, but Mr. H—, one of the guests, told me that Mr. Landor gives away

English delight to indulge, as if to signalize their commanding freedom. He has a wonderful brain, despotic, violent, and inexhaustible, meant for a soldier, by what chance converted to letters, in which there is not a style nor a tint not known to him, yet with an English appetite for action and heroism. The thing done avails, and not what is said about it. An original sentence, a step forward, is worth more than all the censures, Lander is strangely undervalued in England; usually ignored; and sometimes savagely attacked in the Reviews. The criticism may be right, or wrong, and is quickly forgotten; but year after year the scholar must still go back to Lander for a multitude of elegant sentences—for wisdom, wit, and indignation that are unforgettable.

From London, on the 5th August, I went to Highgate, and wrote a note to Mr. Coleridge, requesting leave to pay my respects to him. It was near noon. Mr. Coleridge sent a verbal message that he was in bed, but if I would call after one o'clock, he would see me. I returned at one, and he appeared, a short, thick old man, with bright blue eyes and fine clear complexion, leaning on his cane. He took snuff freely, which presently soiled his cravat and neat black suit. He asked whether I knew Allston, and spoke warmly of his merits and doings when he knew him in Rome; what a master of the Titianesque he was, &c., &c. He spoke of Dr. Channing. It was an unspeakable misfortune that he should have turned out a Unitarian after all. On this, he burst into a declamation on the folly and ignorance of Unitarianism—its high unreasonableness; and taking up Bishop Waterland's book, which lay by the table, he read with vehemence two or three pages written on himself on the fly-leaves—passages, too, which, I believe, are printed in the "Aids to Reflection." When he stopped to take breath, I interposed, that, "whilst I highly valued all his explanations, I was bound to tell him that I was born and bred a Unitarian." "Yes," he said, "I supposed so;" and continued as before. 'It was a wonder, that after so many ages of unquestioning acquiescence in the doctrine of St. Paul—the doctrine of the Trinity, which was also, according to Philo Judeus, the doctrine of the Jews before Christ—this handful of Priestleians should take on themselves to deny it, &c., &c. He was very sorry that Dr. Channing—a man to whom he looked up—no, to say that he looked up to him would be to speak falsely; but a man whom he looked at with so much interest—should embrace such views. When he saw Dr.

known ten persons who loved the good, for one person who loved the true; but it is a far greater virtue to love the true for itself alone, than to love the good for itself alone. He (Coleridge) knew all about Unitarianism perfectly well, because he had once been a Unitarian, and knew what quackery it was. He had been called "the rising star of Unitarianism." He went on defining, or rather refining: 'The Trinitarian doctrine was realism; the idea of God was not essential, but super-essential;' talked of *trinitism* and *tetrakism*, and much more, of which I only caught this, 'that the will was that by which a person is a person; because, if one should push me in the street, and so I should force the man next me into the kennel, I should at once exclaim, "I did not do it, sir," meaning it was not my will.' And this also, 'that if you should insist on your faith here in England, and I on mine, mine would be the hotter side of the fagot.'

I took advantage of a pause to say, that he had many readers of all religious opinions in America, and I proceeded to inquire if the "extract" from the Independent's pamphlet, in the third volume of the Friend, were a veritable quotation. He replied, that it was really taken from a pamphlet in his possession, entitled "A Protest of one of the Independents," or something to that effect. I told him how excellent I thought it, and how much I wished to see the entire work. "Yes," he said, "the man was a chaos of truths, but lacked the knowledge that God was a God of order. Yet the passage would no doubt strike you more in the quotation than in the original, for I have filtered it."

When I rose to go, he said, "I do not know whether you care about poetry, but I will repeat some verses I lately made on my baptismal anniversary," and he recited with strong emphasis, standing, ten or twelve lines, beginning,

"Born unto God in Christ—"

He inquired where I had been travelling; and on learning that I had been in Malta and Sicily, he compared one island with the other, 'repenting what he said to the Bishop of London when he returned from that country, that Sicily was an excellent school of political economy; for, in any town there, it only needed to ask what the government enacted, and reverse that to know what ought to be done; it was the most felicitously opposite legislation to any thing good and wise. There were only three things which the government had brought into that garden of delights, namely, 'teh, pox, and

the seat of population in the next apartment a picture of Allston's, and told me that Montague, a picture-dealer, once came to see him, and, glancing towards this, said, "Well, you have got a picture!" thinking it the work of an old master; afterwards, Montague, still talking with his back to the canvas, put up his hand and touched it, and exclaimed, "By Heaven! this picture is not ten years old!"—so delicate and skilful was that man's touch.

I was in his company for about an hour, but find it impossible to recall the largest part of his discourse, which was often like so many printed paragraphs in his book—perhaps the same—so readily did he fall into certain commonplaces. As I might have foreseen, the visit was rather a spectacle than a conversation, of no use beyond the satisfaction of my curiosity. He was old and pre-occupied, and could not bend to a new companion and think with him.

From Edinburgh I went to the Highlands. On my return, I came from Glasgow to Dumfries, and being intent on delivering a letter which I had brought from Rome, inquired for Craigenputtock. It was a farm in Nithdale, in the parish of Dunscore, sixteen miles distant. No public coach passed near it, so I took a private carriage from the inn. I found the house amid desolate heathery hills, where the lonely scholar nourished his mighty heart. Carlyle was a man from his youth, an author who did not need to hide from his readers, and as absolute a man of the world, unknown and exiled on that hill-farm, as if holding on his own terms what is best in London. He was tall and gaunt, with a cliff-like brow, self-possessed, and holding his extraordinary powers of conversation in easy command; clinging to his northern accent with evident relish; full of lively anecdote, and with a streaming humour, which floated everything he looked upon. His talk playfully exalting the familiar objects, put the companion at once into an acquaintance with his *Lars* and *Lemurs*, and it was very pleasant to learn what was predestined to be a pretty mythology. Few were the objects and lonely the man, "not a person to speak to within sixteen miles except the minister of Dunscore;" so that books inevitably made his topics.

He had names of his own for all the matters familiar to his discourse. "Blackwood's" was the "sand magazine;" "Fraser's" nearer approach to possibility of life was the "mud magazine;" a piece of road near by that marked some failed enterprise was the "grave of the last sixpence." When too much praise of any genius annoyed him, he professed hugely

enclosure in his pen, but pig, by great strokes of judgment, had found out how to let a board down, and had foiled him. For all that, he still thought man the most plastic little fellow in the planet, and he liked Nero's death, "*Qualis artifex pereo*!" better than most history. He worships a man that will manifest any truth to him. At one time he had inquired and read a good deal about America. Landon's principle was mere rebellion, and *that* he feared was the American principle. The best thing he knew of that country was, that in it a man can have meat for his labour. He had read in Stewart's book, that when he inquired in a New York hotel for the Boots, he had been shown across the street and had found Mungo in his own house dining on roast turkey.

We talked of books. Plato he does not read, and he disparaged Socrates; and, when pressed, persisted in making Mirabeau a hero. Gibbon he called the splendid bridge from the old world to the new. His own reading had been multifarious. Tristram Shandy was one of his first books after Robinson Crusoe, and Robertson's America an early favourite. Rousseau's Confessions had discovered to him that he was not a dunce; and it was now ten years since he had learned German, by the advice of a man who told him he would find in that language what he wanted.

He took despairing or satirical views of literature at this moment; recounted the incredible sums paid in one year by the great booksellers for puffing. Hence it comes that no newspaper is trusted now, no books are bought, and the booksellers are on the eve of bankruptcy.

He still returned to English pauperism, the crowded country, the selfish abdication by public men of all that public persons should perform. 'Government should direct poor men what to do. Poor Irish folk come wandering over these moors. My dame makes it a rule to give to every son of Adam bread to eat, and supplies his wants to the next house. But here are thousands of acres which might give them all meat, and nobody to bid these poor Irish go to the moor and till it. They burned the stacks, and so found a way to force the rich people to attend to them.'

We went out to walk over long hills, and looked at Criffel then without his cap, and down into Wordsworth's country. There we sat down, and talked of the immortality of the soul. It was not Carlyle's fault that we talked on that topic, for he had the natural disinclination of every nimble spirit to bruise itself against walls, and did not like to place himself where no step can be taken. But he was honest and true, and cognizant

Time has only a relative existence.

He was already turning his eyes towards London with a scholar's appreciation. London is the heart of the world, he said, wonderful only from the mass of human beings. He liked the huge machine. Each keeps its own round. The baker's boy brings muffins to the window at a fixed hour every day, and that is all the Londoner knows or wishes to know on the subject. But it turned out good men. He named certain individuals, especially one man of letters, his friend, the best mind he knew, whom London had well served.

On the 28th August, I went to Rydal Mount, to pay my respects to Mr. Wordsworth. His daughters called in their father, a plain, elderly, white-haired man, not prepossessing, and disfigured by green goggles. He sat down, and talked with great simplicity. He had just returned from a journey. His health was good, but he had broken a tooth by a fall, when walking with two lawyers, and had said, that he was glad it did not happen forty years ago; whereupon they had praised his philosophy.

He had much to say of America, the more that it gave occasion for his favourite topic,—that society is being enlightened by a superficial tuition, out of all proportion to its being restrained by moral culture. Schools do no good. Tuition is not education. He thinks more of the education of circumstances than of tuition. 'Tis not question whether there are offences of which the law takes cognizance, but whether there are offences of which the law does not take cognizance. Sin is what he fears, and how society is to escape without gravest mischiefs from this source?—He has even said, what seemed a paradox, that they needed a civil war in America, to teach the necessity of knitting the social ties stronger. 'There may be,' he said, 'in America some vulgarity in manner, but that's not important. That comes of the pioneer state of things. But I fear they are too much given to the making of money; and secondly, to politics; that they make political distinction the end, and not the means. And I fear they lack a class of men of leisure,—in short, of gentlemen,—to give a tone of honour to the community. I am told that things are boasted of in the second class of society there, which, in England,—God knows, are done in England every day,—but would never be spoken of. In America I wish to know not how many churches or schools, but what newspapers? My friend, Colonel Hamilton, at the

steering spoon? He was against taking on the tax on news-papers in England, which the reformers represent as a tax upon knowledge, for this reason, that they would be inundated with base prints. He said, he talked on political aspects, for he wished to impress on me and all good Americans to cultivate the moral, the conservative, &c., &c., and never to call into action the physical strength of the people, as had just now been done in England in the Reform Bill, — a thing prophesied by Delolme. He alluded once or twice to his conversation with Dr. Channing, who had recently visited him, laying his hand on a particular chair in which the Doctor had sat.

The conversation turned on books. Lucetius he esteems a far higher poet than Virgil: Not in his system, which is nothing, but in his power of illustration. Faith is necessary to explain anything, and to reconcile the foreknowledge of God with human evil. Of Cousin (whose lectures we had all been reading in Boston), he knew only the name.

I inquired if he had read Carlyle's critical articles and translations. He said, he thought him sometimes insane. He proceeded to abuse Goethe's Wilhelm Meister heartily. It was full of all manner of fornication. It was like the crossing of flies in the air. He had never gone farther than the first part; so disgusted was he that he threw the book across the room. I deprecated this wrath, and said what I could for the better parts of the book; and he courteously promised to look at it again. Carlyle, he said, wrote most obscurely. He was clever and deep, but he defied the sympathies of everybody. Even Mr. Coleridge wrote more clearly, though he had always wished Coleridge would write more to be understood. He led me out into his garden, and showed me the gravel walk in which thousands of his lines were composed. His eyes are much inflamed. This is no loss, except for reading, because he never writes prose, and of poetry he carries even hundreds of lines in his head before writing them. He had just returned from a visit to Staffa, and within three days had made three sonnets on Fingal's Cave, and was composing a fourth, when he was called in to see me. He said, "If you are interested in my verses, perhaps you will like to hear those lines." I gladly assented; and he recollected himself for a few moments, and then stood forth and repeated, one after the other, the three entire sonnets with great animation. I fancied the second and third more beautiful than his poems are wont to be. The third is addressed to the flowers, which, he said, especially the oxeye daisy, are very abundant on the top of the rock. The second alludes to the name of the cave, which is "Cave of

This recitation was so unlooked for and surprising,—the old Wordsworth, standing apart, and reciting to me in a garden-walk, like a schoolboy declaiming,—that I at first was near to laugh; but recollecting myself, that I had come thus far to see a poet, and he was chanting poems to me, I saw that he was right and I was wrong, and gladly gave myself up to hear. I told him how much the few printed extracts had quickened the desire to possess his unpublished poems. He replied, he never was in haste to publish, partly, because he corrected a good deal, and every alteration is unfortunately received after printing; but what he had written would be printed, whether he lived or died. I said, "Tintern Abbey" appeared to be the favourite poem with the public, but more contemplative readers preferred the first books of the "Excursion," and the Sonnets. He said, "Yes, they are better." He preferred such of his poems as touched the affections, to any others; for whatever is didactic,—what theories of society, and so on,—might perish quickly, but whatever combined a truth with an affection was ~~ever~~ *ever* good to-day and good for ever. He cited the sonnet "On the feelings of a high-minded Spaniard," which he preferred to any other (I so understood him), and the "Two Voices," and quoted, with evident pleasure, the verses addressed "To the Skylark." In this connection, he said of the Newtonian theory, that it might yet be superseded and forgotten, and Dalton's atomic theory.

When I prepared to depart, he said he wished to show me what a common person in England could do, and he led me into the enclosure of his clerk, a young man, to whom he had given this slip of ground, which was laid out, or its natural capabilities shown, with much taste. He then said he would show me a better way towards the inn; and he walked a good part of a mile, talking, and ever and anon stopping short to impress the word or the verse, and finally parted from me with great kindness, and returned across the fields.

Wordsworth honoured himself by his simple adherence to truth, and was very willing not to shine; but he surprised by the hard limits of his thought. To judge from a single conversation, he made the impression of a narrow and very English mind; of one who paid for his rare elevation by general tameness and conformity. Of his own beat, his opinions were of no value. It is not very rare to find persons loving sympathy and ease, who expiate their departure from the common, in one direction, by their conformity in every other.

II.—VOYAGE TO ENGLAND

THE occasion of my second visit to England was an invitation from some Mechanics' Institutes in Lancashire and Yorkshire, which separately are organized much in the same way as our New England Lyceums, but, in 1847, had been linked into a "Union," which embraced twenty or thirty towns and cities, and presently extended into the middle counties, and northward into Scotland. I was invited, on liberal terms, to read a series of lectures in them all. The request was urged with every kind suggestion, and every assurance of aid and comfort, by friendliest parties in Manchester, who, in the sequel, amply redeemed their word. The remuneration was equivalent to the fees at that time paid in this country for the like services. At all events, it was sufficient to cover any travelling expenses, and the proposal offered an excellent opportunity of seeing the interior of England and Scotland, by means of a horse, and a committee of intelligent friends, awaiting me in every town.

I did not go very willingly. I am not a good traveller, nor have I found that long journeys yield a fair share of reasonable hours. But the invitation was repeated and pressed at a moment of more leisure, and when I was a little spent by some unusual studies. I wanted a change and a tonic, and England was proposed to me. Besides, there were, at least, the dread attraction and salutary influences of the sea. So I took my berth in the packet-ship *Washington Irving*, and sailed from Boston on Tuesday, 5th October, 1847.

On Friday at noon, we had only made one hundred and thirty-four miles. A nimble Indian would have swum as far; but the captain affirmed that the ship would show us in time all her paces, and we crept along through the floating drift of boards, logs, and chips, which the rivers of Maine and New Brunswick pour into the sea after a freshet.

At last, on Sunday night, after doing one day's work in foul, the storm came, the winds blew, and we flew before a north-wester, which strained every rope and sail. The good ship darts through the water all day, all night, like a fish, quivering with speed, gliding through liquid leagues, sliding from horizon to horizon. She has passed Cape Sable; she has reached the Banks; the land-birds are left; gulls, hawks, ducks, petrels, swim, dive, and hover around; no fishermen; she has passed the Banks, left five sail behind her, far on the edge of the west at sundown, which were far east of us at morn,—though they

say at sea a stern chase is a long race,—and still we fly for our lives. The shortest sea-line from Boston to Liverpool is 2,350 miles. This a steamer keeps, and saves 150 miles. A sailing ship can never go in a shorter line than 3,000, and usually it is much longer. Our good master keeps his kites up to the last moment, studding-sails aloft and aloft, and, by incessant straight steering, never loses a rod of way. Watchfulness is the law of the ship,—watch on watch, for advantage and for life. Since the ship was built, it seems, the master never slept but in his day-clothes whilst on board. "There are many advantages," says Saadi, "in sea-voyaging, but security is not one of them." Yet in hurrying over these abysses, whatever dangers we are running into, we are certainly running out of the risks of hundreds of miles every day, which have their own chances of squall, collision, sea-stroke, piracy, cold, and thunder. Hour for hour, the risk on a steamboat is greater; but the speed is safety, or, twelve days of danger, instead of twenty-four.

Our ship was registered 750 tons, and weighed perhaps, with all her freight, 1,500 tons. The mainmast, from the dock to the top-button, measured 115 feet; the length of the deck, from stem to stern, 155. It is impossible not to personify a ship; everybody does, in everything they say,—she behaves well; she minds her rudder; she swims like a duck; she runs her nose into the water; she looks into a port. Then that wonderful *esprit du corps*, by which we adopt into our self-love everything we touch, makes us all champions of her sailing qualities.

The conscious ship hears all the praise. In one week she has made 1,467 miles, and now, at night, seems to hear the steamer behind her, which left Boston to-day at two, has mended her speed, and is flying before the gray south wind eleven and a half knots the hour. The sea-fire shines in her wake, and far around wherever a wave breaks. I read the hour, 9h. 45', on my watch by this light. Near the equator, you can read small print by it; and the mate describes the phosphoric insects, when taken up in a pail, as shaped like a Carolina potato.

I find the sea-life an acquired taste, like that for tomatoes and olives. The confinement, cold, motion, noise, and odour are not to be dispensed with. The floor of your room is sloped at an angle of twenty or thirty degrees, and I waked every morning with the belief that some one was tipping up my berth. Nobody likes to be treated ignominiously, upset, shoved against the side of the house, rolled over, suffocated with bilge, mephitus, and stewing oil. We get used to these annoyances at last, but the dread of the sea remains longer.

The sea is masculine, the type of active strength. Look, what egg-shells are drifting all over it, each one, like ours, filled with men in ecstasies of terror, alternating with cockney conceit, as the sea is rough or smooth. Is this sad-coloured circle an eternal cemetery? In our graveyards we scoop a pit, but this aggressive water opens mile-wide pits and chasms, and makes a mouthful of a fleet. To the geologist, the sea is the only firmament; the land is in perpetual flux and change, now blown up like a tumour, now sunk in a chasm, and the registered observations of a few hundred years find it in a perpetual tilt, rising and falling. The sea keeps its old level; and 'tis no wonder that the history of our race is so recent, if the roar of the ocean is silencing our traditions. A rising of the sea, such as has been observed, say an inch in a century, from east to west on the land, will bury all the towns, monuments, bones, and knowledge of mankind, steadily and insensibly. If it is capable of these great and secular mischiefs, it is quite as ready at private and local damage; and of this no landman seems so fearful as the seaman. Such discomfort and such danger as the narratives of the captain and mate disclose are had enough as the costly fee we pay for entrance to Europe; but the wonder is always new that any sane man can be a sailor. And here, on the second day of our voyage, stepped out a little boy in his shirt-sleeves, who had hid himself, whilst the ship was in port, in the bread-closet, having no money, and wishing to go to England. The sailors have dressed him in Guernsey frock, with a knife in his belt, and he is climbing nimbly about after them, "likes the work first-rate, and, if the captain will take him, means now to come back again in the ship." The mate avers that this is the history of all sailors; nine out of ten are runaway boys; and adds, that all of them are sick of the sea, but stay in it out of pride. Jack has a life of risks, incessant abuse, and the worst pay. It is a little better with the mate, and not very much better with the captain. A hundred dollars a month is reckoned high pay. If sailors were contented, if they had not resolved again and again not to go to sea any more, I should respect them.

Of course, the inconveniences and terrors of the sea are not of any account to those whose minds are pre-occupied. The water-laws, arctic frost, the mountain, the mine, only shatter cockneyism; every noble activity makes room for itself. A great mind is a good sailor, as a great heart is. And the sea is not slow in disclosing inestimable secrets to a good naturalist.

'Tis a good rule in every journey to provide some piece of liberal study to rescue the hours which bad weather had

company, and taverns, steal from the best economist. Classics which at home are drowsily read have a strange charm in a country inn, or in the transom of a merchant brig. I remember that some of the happiest and most valuable hours I have owed to books, passed, many years ago, on shipboard. The worst impediment I have found at sea is the want of light in the cabin.

We found on board the usual cabin library; Haas Hall, Dumas, Dickens, Bulwer, Balzac, and Sand, were our sea-gods. Among the passengers, there was some variety of talent and profession; we exchanged our experiences, and all learned something. The busiest talk with leisure and convenience at sea, and sometimes a memorable fact turns up, which you have long had a vacant niche for, and seize with the joy of a collector. But, under the best conditions, a voyage is one of the severest tests to try a man. A college examination is nothing to it. Sea-days are long,—these lack-lustre, joyless days which whistled over us; but they were few, only fifteen, as the captain counted, sixteen according to me. Reckoned from the time when we left soundings, our speed was such that the captain drew the line of his course in red ink on his chart, for the encouragement or envy of future navigators.

It has been said that the King of England would consult his dignity by giving audience to foreign ambassadors in the cabin of a man-of-war. And I think the white path of an Atlantic ship the right avenue to the palace front of this seafaring people, who for hundreds of years claimed the strict sovereignty of the sea, and exacted toll and the striking sail from the ships of all other peoples. When their privilege was disputed by the Dutch and other junior mariners, on the plea that you could never anchor on the same wave, or hold property in what was always flowing, the English did not stick to claim the channel, or bottom of all the main. "As if," said they, "we contended for the drops of the sea, and not for its situation, or the bed of those waters. The sea is bounded by His Majesty's empire."

As we neared the land, its genius was felt. This was inevitably the British side. In every man's thought arises now a new system, English sentiments, English loves and fears, English history and social modes. Yesterday, every passenger had measured the speed of the ship by watching the bubbles over the ship's bulwarks. To-day, instead of bubbles, we measure by Kinsale, Cork, Waterford, and Ardmora. There lay the green shore of Ireland, like some coast of plenty. We could see towns, towers, churches, harvests; but the curse of eight hundred years we could not discern.

III.—LAND.

ALFIERI thought Italy and England the only countries worth living in; the former, because there nature vindicates her rights, and triumphs over the evils inflicted by the governments; the latter, because art conquers nature, and transforms a rude, ungenial land into a paradise of comfort and plenty. England is a garden. Under an ash-coloured sky, the fields have been combed and rolled till they appear to have been finished with a pencil instead of a plough. The solidity of the structures that compose the towns speaks the industry of ages. Nothing is left as it was made. Rivers, hills, valleys, the sea itself, feel the hand of a master. The long habitation of a powerful and ingenious race has turned every rood of land to its best use, has found all the capabilities, the arable soil, the quarriable rock, the highways, the byways, the fords, the navigable waters; and the new arts of intercourse meet you everywhere; so that England is a huge phalanstery, where all that man wants is provided within the precinct. Cushioned and comforted in every manner, the traveller rides as on a cannon-ball, high and low, over rivers and towns, through mountains, in tunnels of three or four miles, at near twice the speed of our trains; and reads quietly the Times newspaper, which, by its immense correspondence and reporting, seems to have mechanized the rest of the world for his occasion.

The problem of the traveller landing at Liverpool is, Why England is England? What are the elements of that power which the English hold over other nations? If there be one test of national genius universally accepted, it is success; and if there be one successful country in the universe for the last millennium, that country is England.

A wise traveller will naturally choose to visit the best of actual nations; and an American has more reasons than another to draw him to Britain. In all that is done or begun by the Americans towards right thinking or practice, we are met by a civilization already settled and overpowering. The culture of the day, the thoughts and aims of men, are English thoughts and aims. A nation considerable for a thousand years since Egbert, it has, in the last centuries, obtained the ascendant, and stamped the knowledge, activity, and power of mankind with its impress. Those who resist it do not feel it or obey it less. The Russian in his snows is aiming to be English. The Turk and Chinese also are making awkward efforts to be English. The practical common-sense of modern

society, the utilitarian direction which labour, laws, opinion, religion take, is the natural genius of the British mind. The influence of France is a constituent of modern civility, but not enough opposed to the English for the most wholesome effect. The American is only the continuation of the English genius into new conditions, more or less propitious.

See what books fill our libraries. Every book we read, every biography, play, romance, in whatever form, is still English history and manners. So that a sensible Englishman once said to me, "As long as you do not grant us copyright, we shall have the teaching of you."

But we have the same difficulty in making a social or moral estimate of England, as the sheriff finds in drawing a jury to try some cause which has agitated the whole community, and on which everybody finds himself an interested party. Officers, jurors, judges, have all taken sides. England has inoculated all nations with her civilization, intelligence, and tastes; and, to resist the tyranny and prepossession of the British element, a serious man must aid himself, by comparing with it the civilizations of the farthest east and west, the old Greek, the Oriental, and, much more, the ideal standard, if only by means of the very impatience which English forms are sure to awaken in independent minds.

Besides, if we will visit London, the present time is the best time, as some signs portend that it has reached its highest point. It is observed that the English interest is a little less within a few years; and hence the impression that the British power has culminated, is in solstice, or already declining.

As soon as you enter England, which, with Wales, is no larger than the State of Georgia,* this little land stretches by an illusion to the dimensions of an empire. The innumerable details, the crowded succession of towns, cities, cathedrals, castles, and great and decorated estates, the number and power of the trades and guilds, the military strength and splendour, the multitudes of rich and of remarkable people, the servants and equipages,—all these catching the eye, and never allowing it to pause, hide all boundaries, by the impression of magnificence and endless wealth.

I reply to all the urgencies that refer me to this and that object indispensably to be seen,—Yes, to see England well needs a hundred years; for, what they told me was the merit of Sir John Soane's Museum, in London,—that it was well packed and well saved,—is the merit of England;—it is stuffed full, in all corners and crevices, with towns, towers, churches, villas, palaces, hospitals, and charity-houses. In the history

*Add South Carolina, and you have more than an equivalent for the area of Scotland.

of art, it is a long way from a cromlech to York minster; yet all the intermediate steps may still be traced in this all-preserving island.

The territory has a singular perfection. The climate is warmer by many degrees than it is entitled to by latitude. Neither hot nor cold, there is no hour in the whole year when one cannot work. Here is no winter, but such days as we have in Massachusetts in November, a temperature which makes no exhausting demand on human strength, but allows the attainment of the largest stature. Charles the Second said, "it invited men abroad more days in the year and more hours in the day than any other country." Then England has all the materials of a working country except wood. The constant rain,—a rain with every tide, in some parts of the island,—keeps its multitude of rivers full, and brings agricultural production up to the highest point. It has plenty of water, of stone, of potter's clay, of coal, of salt, and of iron. The land naturally abounds with game, immense heaths and downs are paved with quails, grouse, and woodcock, and the shores are animated by water birds. The rivers and the surrounding sea spawn with fish; there are salmon for the rich, and sprats and herrings for the poor. In the northern lochs, the herring are in innumerable shoals; at one season, the country people say, the lakes contain one part water and two parts fish.

The only drawback on this industrial convenience is the darkness of its sky. The night and day are too nearly of a colour. It strains the eyes to read and to write. Add the coal smoke. In the manufacturing towns, the fine soot or *blacks* darken the day, give white sheep the colour of black sheep, discolour the human saliva, contaminate the air, poison many plants, and corrode the monuments and buildings.

The London fog aggravates the distempers of the sky, and sometimes justifies the epigram on the climate by an English wit, "in a fine day, looking up a chimney; in a foul day, looking down one." A gentleman in Liverpool told me that he found he could do without a fire in his parlour about one day in the year. It is however pretended that the enormous consumption of coal in the island is also felt in modifying the general climate.

Factitious climate, factitious position. England resembles a ship in its shape, and, if it were one, its best admiral could not have worked it, or anchored it in a more judicious or effective position. Sir John Herschel said, "London was the centre of the terrene globe." The shopkeeping nation, to use a shop word, has a *good stand*. The old Venetians pleased themselves with the flattery, that Venice was in 45°, midway between the poles and the line; as if that were an imperial

centrality. Long of old, the Greeks fancied Delphi the navel of the earth, in their favourite mode of fabling the earth to be an animal. The Jews believed Jerusalem to be the centre. I have seen a kratometric chart designed to show that the city of Philadelphia was in the same thermic belt, and, by inference, in the same belt of empire, as the cities of Athens, Rome, and London. It was drawn by a patriotic Philadelphian, and was examined with pleasure, under his showing, by the inhabitants of Chestnut Street. But, when carried to Charleston, to New Orleans, and to Boston, it somehow failed to convince the ingenious scholars of all those capitals.

But England is anchored at the side of Europe, and right in the heart of the modern world. The sea, which, according to Virgil's famous line, divided the poor Britons utterly from the world, proved to be the ring of marriage with all nations. It is not down in the books,—it is written only in the geologic strata,—that fortunate day when a wave of the German Ocean burst the old isthmus which joined Kent and Cornwall to France, and gave to this fragment of Europe its impregnable sea wall, cutting off an island of eight hundred miles in length with an irregular breadth reaching to three hundred miles; a territory large enough for independence enriched with every seed of national power, so near, that it can see the harvests of the continent; and so far, that who would cross the strait must be an expert mariner, ready for tempests. As America, Europe, and Asia lie, these Britons have precisely the best commercial position in the whole planet, and are sure of a market for all the goods they can manufacture. And to make these advantages avail, the river Thames must dig its spacious outlet to the sea from the heart of the kingdom, giving road and landing to innumerable ships, and all the conveniency to trade, that a people so skilful and sufficient in economizing water-front by docks, warehouses, and lighters required. When James the First declared his purpose of punishing London by removing his Court, the Lord Mayor replied, "that, in removing his royal presence from his lieges, they hoped he would leave them the Thames."

In the variety of surface, Britain is a miniature of Europe, having plain, forest, marsh, river, sea-shore; mines in Cornwall; caves in Matlock and Derbyshire; delicious landscape in Dovedale, delicious sea-view at Tor-Bay, Highlands in Scotland, Snowdon in Wales; and, in Westmorland and Cumberland, a pocket Switzerland, in which the lakes and mountains are on a sufficient scale to fill the eye and touch the imagination. It is a nation conveniently small. Fontenelle thought that nature had sometimes a little affectation; and there is such an artificial completeness in this nation of artificers, as if

there were a design from the beginning to elaborate a bigger Birmingham. Nature held counsel with herself, and said, 'My Romans are gone. To build my new empire, I will choose a rude race, all masculine, with brutish strength. I will not grudge a competition of the roughest males. Let buffalo gore buffalo, and the pasture to the strongest! For I have work that requires the best will and sinew. Sharp and temperate northern breezes shall blow, to keep that will alive and alert. The sea shall disjoin the people from others, and knit them to a fierce nationality. It shall give them markets on every side. Long time I will keep them on their feet, by poverty, border-wars, seafaring, sea-risks, and the stimulus of gain. An island,—but not so large, the people not so many as to glut the great markets and depress one another, but proportioned to the size of Europe and the continents.'

With its fruits, and wares, and money, must its civil influence radiate. It is a singular coincidence to this geographic centrality, the spiritual centrality, which Emanuel Swedenborg ascribes to the people. "For the English nation, the best of them are in the centre of all Christians, because they have interior intellectual light. This appears conspicuously in the spiritual world. This light they derive from the liberty of speaking and writing, and thereby of thinking."

* IV.—RACE.

AN ingenious anatomist has written a book* to prove that races are imperishable, but nations are pliant political constructions, easily changed or destroyed. But this writer did not found his assumed races on any necessary law, disclosing their ideal or metaphysical necessity; nor did he, on the other hand, count with precision the existing races, and settle the true bounds; a point of nicety, and the popular test of the theory. The individuals at the extremes of divergence in one race of men are as unlike as the wolf to the lapdog. Yet each variety shades down imperceptibly into the next, and you cannot draw the line where a race begins or ends. Hence every writer makes a different count. Blumenbach reckons five races; Humboldt three; and Mr. Pickering, who lately, in our Exploring Expedition, thinks he saw all the kinds of men that can be on the planet, makes eleven.

The British Empire is reckoned to contain 222,000,000 souls, —perhaps a fifth of the population of the globe; and to com-

* *The Races*, a Fragment. By Robert Knox. London: 1850.

prise a territory of 5,060,000 square miles. So far have British people predominated. Perhaps forty of these millions are of British stock. Add the United States of America, which reckon, exclusive of slaves, 20,000,000 of people, on a territory of 3,000,000 square miles, and in which the foreign element, however considerable, is rapidly assimilated, and you have a population of English descent and language, of 60,000,000, and governing a population of 245,000,000 souls.

The British census proper reckons twenty-seven and a half millions in the home countries. What makes this census important is the quality of the units that compose it. They are free forcible men, in a country where life is safe, and has reached the greatest value. They give the bias to the current age; and that, not by chance or by mass, but by their character, and by the number of individuals among them of personal ability. It has been denied that the English have genius. Be it as it may, men of vast intellect have been born on their soil, and they have made or applied the principal inventions. They have sound bodies, and supreme endurance in war and in labour. The spawning force of the race has sufficed to the colonization of great parts of the world; yet it remains to be seen whether they can make good the exodus of millions from Great Britain, amounting, in 1852, to more than a thousand a day. They have assimilating force, since they are imitated by their foreign subjects; and they are still aggressive and propagandist, enlarging the dominion of their arts and liberty. Their laws are hospitable, and slavery does not exist under them. What oppression exists is incidental and temporary; their success is not sudden or fortunate, but they have maintained constancy and self-equality for many ages.

Is this power due to their race, or to some other cause? Men hear gladly of the power of blood or race. Everybody likes to know that his advantages cannot be attributed to air, soil, sea, or to local wealth, as mines and quarries, nor to laws and traditions, nor to fortune, but to superior brain, as it makes the praise more personal to him.

We anticipate in the doctrine of race something like that law of physiology, that, whatever bone, muscle, or essential organ is found in one healthy individual, the same part or organ may be found in or near the same place in its congener; and we look to find in the son every mental and moral property that existed in the ancestor. In race, it is not the broad shoulders, or litherness, or stature, that give advantage, but a symmetry that reaches as far as to the wit. Then the miracle and renown begin. Then first we care to examine the pedigree, and copy heedfully the training--what food they ate, what nursing, school, and exercises they had, which resulted in this

mother-wit, delicacy of thought, and robust wisdom. How came such men as King Alfred, and Roger Bacon, William of Wykeham, Walter Raleigh, Philip Sidney, Isaac Newton, William Shakespeare, George Chapman, Francis Bacon, George Herbert, Henry Vane, to exist here? What made these delicate natures? was it the air? was it the sea? was it the parentage? For it is certain that these men are samples of their contemporaries. The hearing ear is always found close to the speaking tongue; and no genius can long or often utter anything which is not invited and gladly entertained by men around him.

It is race, is it not, that puts the hundred millions of India under the dominion of a remote island in the north of Europe? Race avails much, if that be true, which is alleged, that all Celts are Catholics, and all Saxons are Protestants; that Celts love unity of power, and Saxons the representative principle. Race is a controlling influence in the Jew, who, for two millenniums, under every climate, has preserved the same character and employments. Race in the negro is of appalling importance. The French in Canada, cut off from all intercourse with the parent people, have held their national traits. I chanced to read Tacitus "on the Manners of the Germans," not long since, in Missouri, and the heart of Illinois, and I found abundant points of resemblance between the Germans of the Hercynian forest, and our *Hoosiers*, *Suckers*, and *Badgers* of the American woods.

But whilst race works immortally to keep its own, it is resisted by other forces. Civilization is a re-agent, and eats away the old traits. The Arabs of to-day are the Arabs of Pharaoh; but the Briton of to-day is a very different person from Cassibelaunus or Ossian. Each religious sect has its physiognomy. The Methodists have acquired a face; the Quakers, a face; the nuns, a face. An Englishman will pick out a dissenter by his manners. Trades and professions carve their own lines on face and form. Certain circumstances of English life are not less effective; as, personal liberty; plenty of food; good ale and mutton; open market, or good wages for every kind of labour; high bribes to talent and skill; the island life, or the million opportunities and outlets for expanding and misplaced talent; readiness of combination among themselves for politics or for business strikes; and sense of superiority founded on habit of victory in labour and in war; and the appetite for superiority grows by feeding.

It is easy to add to the counteracting forces to race. Credence is a main element. 'Tis said, that the views of nature held by any people determine all their institutions. Whatever influences add to mental or moral faculty, take men out of

nationality, as out of other conditions, and make the national life a culpable compromise.

These limitations of the formidable doctrine of race suggest others which threaten to undermine it, as not sufficiently based. The fixity or inconvertibleness of races as we see them, is a weak argument for the eternity of those frail boundaries since all our historical period is a point to the duration in which nature has wrought. Any the least and solitariest fact in our natural history, such as the melioration of fruits and of animal stocks, has the worth of a power in the opportunity of geologic periods. Moreover, though we flatter the self-love of men and nations by the legend of pure races, all our experience is of the gradation and resolution of races, and strange resemblances meet us everywhere. It need not puzzle us that Malay and Papuan, Celt and Roman, Saxon and Tartar should mix, when we see the rudiments of tiger and baboon in our human form, and know that the barriers of races are not so firm, but that some spray sprinkles us from the antediluvian seas.

The low organizations are simplest; a mere mouth, a jelly, or a straight worm. As the scale mounts, the organizations become complex. We are piqued with pure descent, but nature loves inoculation. A child blends in his face the faces of both parents, and some feature from every ancestor whose face hangs on the wall. The best nations are those most widely related; and navigation, as effecting a world-wide mixture, is the most potent advance of nations.

The English composite character betrays a mixed origin. Everything English is a fusion of distant and antagonistic elements. The language is mixed; the names of men are of different nations—three languages, three or four nations;—the currents of thought are counter; contemplation and practical skill; active intellect and dead conservatism; world-wide enterprise, and devoted use and wont; aggressive freedom and hospitable law, with bitter class-legislation; a people scattered by their wars and affairs over the face of the whole earth, and homesick to a man; a country of extremes—dukes and chartists, Bishops of Durham and naked heathen colliers;—nothing can be praised in it without damning exceptions, and nothing denounced without salves of cordial praise.

Neither do this people appear to be of one stem; but collectively a better race than any from which they are derived. Nor is it easy to trace it home to its original seats. Who can call by right names what races are in Britain? Who can trace them historically? Who can discriminate them anatomically, or metaphysically?

In the impossibility of arriving at satisfaction on the

historical question of race, and—come of whatever disputable ancestry—the indisputable Englishman before me, himself very well marked, and nowhere else to be found—I fancied I could leave quite aside the choice of a tribe as his lineal progenitors. Defoe said in his wrath, "the Englishman was the mud of all races." I incline to the belief, that, as water, lime, and sand, make mortar, so certain temperaments marry well and, by well-managed contrarieties, develop as drastic a character as the English. On the whole, it is not so much a history of one or of certain tribes of Saxons, Jutes, or Frisians, coming from one place, and genetically identical, as it is an anthology of temperaments out of them all. Certain temperaments suit the sky and soil of England, say eight or ten or twenty varieties, as, out of a hundred pear-trees, eight or ten suit the soil of an orchard, and thrive, whilst all the unadapted temperaments die out.

The English derive their pedigree from such a range of nationalities, that there needs sea-room and land-room to unfold the varieties of talent and character. Perhaps the ocean, serves as a galvanic battery to distribute acids at one pole, and alkalis at the other. So England tends to accumulate her liberals in America, and her conservatives at London. The Scandinavians in her race still hear in every age the murmurs of their mother, the ocean; the Briton in the blood hugs the homestead still.

Again, as if to intensate the influences that are not of race, what we think of when we talk of English traits really narrows itself to a small district. It excludes Ireland, and Scotland, and Wales, and reduces itself at last to London, that is, to those who come and go thither. The portraits that hang on the walls in the Academy Exhibition at London, the figures in Punch's drawings of the public men, or of the club-houses, the prints in the shop-windows, are distinctive English, and not American, no, nor Scotch, nor Irish: but 'tis a very restricted nationality. As you go north into the manufacturing and agricultural districts, and to the population that never travels, as you go into Yorkshire, as you enter Scotland, the world's Englishman is no longer found. In Scotland, there is a rapid loss of all grandeur of mien and manners; a provincial eagerness and acuteness appear; the poverty of the country makes itself remarked, and a coarseness of manners; and, among the intellectual, is the insanity of dialects. In Ireland, are the same climate and soil as in England, but less food, no right relation to the land, political dependence, small tenantry, and an inferior or misplaced race.

These queries concerning ancestry and blood may be well allowed, for there is no prosperity that seems in re to depend

on the kind of man than British prosperity. Only a hardy and wise people could have made this small territory great. We say, in a regatta or yacht race, that if the boats are anywhere nearly matched, it is the man that wins. Put the best sailing master into either boat, and he will win.

Yet it is fine for us to speculate in face of unbroken traditions, though vague, and losing themselves in fable. The traditions have got footing, and refuse to be disturbed. The kitchen-clock is more convenient than sidereal time. We must use the popular category, as we do by the Linnean classification, for convenience, and not as exact and final. Otherwise, we are presently confounded, when the best settled traits of one race are claimed by some new ethnologist as precisely characteristic of the rival tribe.

I found plenty of well-marked English types, the ruddy complexion fair and plump, robust men, with faces cut like a die, and a strong island speech and accent; a Norman type, with the complacency that belongs to that constitution. Others, who might be Americans, for anything that appeared in their complexion or form; and their speech was much less marked, and their thought much less bound. We will call them Saxons. Then the Roman has implanted his dark complexion in the trinity or quaternity of bloods.

1. The sources from which tradition derives their stock are mainly three. And, first, they are of the oldest blood of the world—the Celtic. Some peoples are deciduous or transitory. Where are the Greeks? where the Etrurians? where the Romans? But the Celts or Sidonides are an old family, of whose beginning there is no memory, and their end is likely to be still more remote in the future: for they have endurance and productiveness. They planted Britain, and gave to the seas and mountains names which are poems, and imitate the pure voices of nature. They are favourably remembered in the oldest records of Europe. They had no violent feudal tenure, but the husbandman owned the land. They had an alphabet, astronomy, priestly culture, and a sublime creed. They have a hidden and precarious genius. They made the best popular literature of the middle ages in the songs of Merlin, and the tender and delicious mythology of Arthur.

2. The English come mainly from the Germans, whom the Romans found hard to conquer in two hundred and ten years—say, impossible to conquer—when one remembers the long sequel: a people about whom, in the old empire, the rumour ran, there was never any that meddled with them that repented it not.

3. Charlemagne, halting one day in a town of Northness

Gaul, looked out of a window, and saw a fleet of Northmen cruising in the Mediterranean. They even entered the port of the town where he was, causing no small alarm and sudden manning and arming of his galleys. As they put out to sea again, the emperor gazed long after them, his eyes bathed in tears. "I am tormented with sorrow," he said, "when I foresee the evils they will bring on my posterity." There was reason for these Xerxes' tears. The men who have built a ship and invented the rig—cordage, sail, compass, and pump—the working in and out of port, have acquired much more than a ship. Now arm them, and every shore is at their mercy. For, if they have not numerical superiority where they anchor, they have only to sail a mile or two to find it. Bonaparte's art of war, namely of concentrating force on the point of attack, must always be theirs who have the choice of the battleground. Of course they come into the fight from a higher ground of power than the land-nations; and can engage them on shore with a victorious advantage in the retreat. As soon as the shores are sufficiently peopled to make piracy a losing business, the same skill and courage are ready for the service of trade.

The *Heimskringla*,* or Sagas of the Kings of Norway, collected by Smorre Sturleson, is the Iliad and Odyssey of English history. Its portraits, like Homer's, are strongly individualized. The Sagas describe a monarchical republic like Sparta. The government disappears before the importance of citizens. In Norway, no Persian masses fight and perish to aggrandize a king, but the actors are bonders or landholders, every one of whom is named and personally and patronymically described, as the king's friend and companion. A sparse population gives this high worth to every man. Individuals are often noticed as very handsome persons, which trait only brings the story nearer to the English race. Then the solid material interest predominates, so dear to English understanding, wherein the association is logical, between merit and land. The heroes of the Sagas are not the knights of South Europe. No vapouring of France and Spain has corrupted them. They are substantial farmers, whom the rough times have forced to defend their properties. They have weapons which they use in a determined manner, by no means for chivalry, but for their acres. They are people considerably advanced in rural arts, living amphibiously on a rough coast, and drawing half their food from the sea, and half from the land. They have herds of cows, and malt, wheat, bacon, butter, and cheese. They fish in the fford, and hunt the deer

* *Heimskringla*. Translated by Samuel Laing, Esq. London, 1844.

A king among these farmers has a varying power, sometimes not exceeding the authority of a sheriff. A king was maintained much as, in some of our country districts, a winter-schoolmaster is quartered, a week here, a week there, and a fortnight on the next farm—on all the farmers in rotation. This the king calls going into guest-quarters, and it was the only way in which, in a poor country, a poor king with many retainers, could be kept alive, when he leaves his own farm to collect his dues through the kingdom.

These Norsemen are excellent persons in the main, with good sense, steadiness, wise speech, and prompt action. But they have a singular turn for homicide; their chief end of man is to murder, or to be murdered; oars, scythes, harpoons, crowbars, peatknives, and hayforks, are tools valued by them all the more for their charming aptitude for assassinations. A pair of kings, after dinner, will divert themselves by thrusting each his sword through the other's body, as did Yngve and Alf. Another pair ride out on a morning for a frolic, and, finding no weapon near, will take the bits out of their horses' mouths, and crush each other's heads with them, as did Alvis and Eric. The sight of a tent-cord or a clank-string puts them on hanging somebody, a wife, or a husband, or, best of all, a king. If a farmer has so much as a hayfork, he sticks it into a King Dag. King Ingjald finds it vastly amusing to burn up half a dozen kings in a hall, after getting them drunk. Never was poor gentleman so surfeited with life, so fortunate to be rid of it, as the Northman. If he cannot pick any other quarrel, he will get himself comfortably gored by a bull's horns, like Egil, or slain by a land-slide, like the agricultural King Omund. Odin died in his bed, in Sweden; but it was a proverb of ill condition, to die the death of old age. King Hake of Sweden cuts and slashes in battle, as long as he can stand, then orders his war-ship, loaded with his dead men and their weapons, to be taken out to sea, the tiller shipped, and the sails spread; being left alone, he sets fire to some tar-wood, and lies down contented on deck. The wind blew off the hull, the ship flew burning in clear flame, out between the islets into the ocean, and there was the right end of King Hake.

The early Sagas are sanguinary and piratical; the later are of a noble strain. History rarely yields us better passages than the conversation between King Sigurd the Cruentous, and King Eystein, his brother, on their respective merits—one, the soldier, and the other, a lover of the arts of peace.

But the reader of the Norman history must steel himself by holding fast the remote compensations which result from animal vigour. As the old fossil world shows that the first steps of reducing the chaos were confided to saurians and

other huge and horrible animals, so the foundations of the new civility were to be laid by the most savage men.

The Normans came out of France into England worse men than they went into it, one hundred and sixty years before. They had lost their own language, and learned the Romance or barbarous Latin of the Gauls; and had acquired, with the language, all the vices it had names for. The conquest has obtained in the chronicles, the name of the "memory of sorrow." Twenty thousand thieves landed at Hastings. These founders of the House of Lords were greedy and ferocious dragoons, sons of greedy and ferocious pirates. They were all alike, they took every thing they could carry, they burned, harried, violated, tortured, and killed, until every thing English was brought to the verge of ruin. Such, however, is the illusion of antiquity and wealth, that decent and dignified men now existing, boast their descent from these filthy thieves, who showed a far juster conviction of their own merits, by assuming for their types the swine, goat, jackal, leopard, wolf, and snake, which they severally resembled.

England yielded to the Danes and Northmen in the tenth and eleventh centuries, and was the receptacle into which all the mettle of that strenuous population was poured. The continued draught of the best men in Norway, Sweden, and Denmark, to these piratical expeditions, exhausted those countries, like a tree which bears much fruit when young, and these have been second-rate powers ever since. The power of the race migrated, and left Norway void. King Olaf said, "When King Harold, my father, went westward to England, the chosen men in Norway followed him: but Norway was so emptied then, that such men have not since been to find in the country, nor especially such a leader as King Harold was for wisdom and bravery."

It was a tardy recoil of these invasions, when, in 1801, the British government sent Nelson to bombard the Danish forts in the Sound; and, in 1807, Lord Cathcart, at Copenhagen, took the entire Danish fleet, as it lay in the basins, and all the equipments from the Arsenal, and carried them to England. Konghelle, the town where the kings of Norway, Sweden, and Denmark were wont to meet, is now rented to a private English gentleman for a hunting ground.

It took many generations to trim, and comb, and perfume the first boat-load of Norse pirates into royal highnesses and most noble Knights of the Garter: but every sparkle of ornament dates back to the Norse boat. There will be time enough to mellow this strength into civility and religion. It is a medical fact, that the children of the blind see; the children of felons have a healthy conscience. Many a mean, dastardly

boy is, at the age of puberty, transformed into a serious and generous youth.

The mildness of the following ages has not quite effaced these traits of Odin: as the rudiment of a structure matured in the tiger is said to be still found unabsorbed in the Caucasian man. The nation has a tough, acrid, animal nature, which centuries of churching and civilizing have not been able to sweeten. Alfieri said, "the crimes of Italy were the proof of the superiority of the stock;" and one may say of England, that this watch moves on a splinter of adamant. The English uncultured are a brutal nation. The crimes recorded in their calendars leave nothing to be desired in the way of cold malignity. Dear to the English heart is a fair stand-up fight. The brutality of the manners in the lower class appears in the boxing, bear-baiting, cock-fighting, love of executions, and in the readiness for a set-to in the streets, delightful to the English of all classes. The eastern mongers of London streets hold cowardice in loathing:—"we must work our fists well: we are all handy with our fists." The public schools are charged with being bear-gardens of brutal strength, and are liked by the people for that cause. The flogging is a trait of the same quality. Medwin, in the *Life of Shelley*, relates, that, at a military school, they rolled up a young man in a snowball, and left him so in his room, while the other cadets went to church;—and crippled him for life. They have retained impressment, deck-flogging, army-flogging, and school-flogging. Such is the ferocity of the army discipline, that a soldier sentenced to flogging, sometimes prays that his sentence may be commuted to death. Flogging banished from the armies of Western Europe, remains here by the sanction of the Duke of Wellington. The right of the husband to sell the wife has been retained down to our times. The Jews have been the favourite victims of royal and popular persecution. Henry III. mortgaged all the Jews in the kingdom to his brother, the Earl of Cornwall, as security for money which he borrowed. The torture of criminals, and the rack for extorting evidence, were slowly disused. Of the criminal statutes, Sir Samuel Romilly said, "I have examined the codes of all nations, and ours is the worst, and worthy of the Anthropophagi." In the last session, the House of Commons was listening to details of flogging and torture practised in the jails.

As soon as this land, thus geographically posted, got a hardy people into it, they could not help becoming the sailors and factors of the globe. From childhood they dabbled in water, they swam like fishes, their playthings were boats. In the case of the ship-money, the judges deluged it for law

that "England being an island, the very midland shires therein are all to be accounted maritime;" and Fuller adds, "the genius even of landlocked counties driving the natives with a maritime dexterity." As early as the conquest, it is remarked in explanation of the wealth of England, that its merchants trade to all countries.

The English, at the present day, have great vigour of body and endurance. Other countrymen look slight and undersized beside them, and invalids. They are bigger men than the Americans. I suppose a hundred English taken at random out of the street, would weigh a fourth more than as many Americans. Yet, I am told, the skeleton is not larger. They are round, ruddy, and handsome; at least, the whole bust is well formed; and there is a tendency to stout and powerful frames. I remarked the stoutness, on my first landing at Liverpool; porter, drayman, coachman, guard, what substantial, respectable, grandfatherly figures, with costume and manners to suit. The American has arrived at the old mansion-house, and finds himself among uncles, aunts, and grand-sires. The pictures on the chimney-sides of his nursery were pictures of these people. Here they are in the identical costumes and air, which so took him.

It is the fault of their forms that they grow stocky, and the women have that disadvantage—few tall, slender figures of flowing shape, but stunted and thick-set persons. The French say that the English women have two left hands. But, in all ages, they are a handsome race. The bronze monuments of crusaders lying cross-legged, in the Temple Church at London, and those in Worcester and in Salisbury Cathedrals, which are seven hundred years old, are of the same type as the best youthful heads of men now in England;—please by beauty of the same character, an expression blending good-nature, valour, and refinement, and, mainly, by that uncorrupt youth in the face of manhood, which is daily seen in the streets of London.

Both branches of the Scandinavian race are distinguished for beauty. The anecdote of the handsome captives which Saint Gregory found at Rome, A.D. 600, is matched by the testimony of the Norman chroniclers, five centuries later, who wondered at the beauty and long flowing hair of the young English captives. Meantime, the Heimskringla has frequent occasion to speak of the personal beauty of its heroes. When it is considered what humanity, what resources of mental and moral power, the traits of the blonde race betoken—its accession to empire marks a new and finer epoch, wherein the old mineral force shall be subjugated at last by humanity, and shall plough in its furrow henceforward. It is not a final race, once a crab always crab, but a race with a future.

On the English face are combined decision and nerve, with the fair complexion, blue eyes, and open and florid aspect. Hence the love of truth, hence the sensibility, the fine perception, and poetic construction. The fair Saxon man, with open front, and honest meaning, domestic, affectionate, is not the wood out of which cannibal, or inquisitor, or assassin is made, but he is moulded for law, lawful trade, civility, marriage, the nurture of children, for colleges, churches, charities, and colonies.

They are rather manly than warlike. When the war is over, the mask falls from the affectionate and domestic tastes, which make them women in kindness. This union of qualities is fabled in their national legend of *Beauty and the Beast*, or, long before, in the Greek legend of *Hermaphrodite*. The two sexes are co-present in the English mind. I apply to Britannia, queen of seas and colonies, the words in which her latest novelist portrays his heroine: "she is as mild as she is game, and as game as she is mild." The English delight in the antagonism which combines in one person the extremes of courage and tenderness. Nelson, dying at Trafalgar, sends his love to Lord Collingwood, and, like an innocent schoolboy that goes to bed, says, "Kiss me, Hardy," and turns to sleep. Lord Collingwood, his comrade, was of a nature the most affectionate and domestic. Admiral Rodney's figure approached to delicacy and effeminacy, and he declared himself very sensible to fear, which he surmounted only by considerations of honour and public duty. Clarendon says, the Duke of Buckingham was so modest and gentle, that some courtiers attempted to put affronts on him, until they found that this modesty and effeminacy was only a mask for the most terrible determination. And Sir Edward Parry said, the other day, of Sir John Franklin, that, "if he found Wellington Sound open, he explored it; for he was a man who never turned his back on a danger, yet of that tenderness, that he would not brush away a mosquito." Even for their highwaymen the same virtue is claimed, and Robin Hood comes described to us as *mitissimus predonum*, the gentlest thief. But they know where their war-dogs lie. Cromwell, Blake, Marlborough, Chatham, Nelson, and Wellington, are not to be trifled with, and the brutal strength which lies at the bottom of society, the animal ferocity of the quays and cockpits, the bullies of the costermongers of Shoreditch, Seven Dials, and Spitalfields, they know how to wake up.

They have a vigorous health, and last well into middle and old age. The old men are as red as roses, and still handsome. A clear skin, a peach-bloom complexion, and good teeth, are found all over the island. They use a plentiful and nutritious diet. The operative cannot subsist on water-cresses. Beef,

mutton, wheat-bread, and malt liquors, are universal among the first-class labourers. Good feeding is a chief point of national pride among the vulgar, and, in their caricatures, they represent the Frenchman as a poor, starved body. It is curious that Tacitus found the English beer already in use among the Germans: "they make from barley or wheat a drink corrupted into some resemblance to wine." Lord Chief Justice Fortescue, in Henry VI.'s time, says, "The inhabitants of England drink no water, unless at certain times, on a religious score, and by way of penance." The extremes of poverty and ascetic penance, it would seem, never reach cold water in England. Wood, the antiquary, in describing the poverty and maceration of Father Lacey, an English Jesuit, does not deny him beer. He says "his bed was under a thatching, and the way to it up a ladder; his fare was coarse; his drink, of a penny a gawn, or gallon."

They have more constitutional energy than any other people. They think, with Henri Quatre, that manly exercises are the foundation of that elevation of mind which gives one nature ascendancy over another; or, with the Arabs, that the days spent in the chase are not counted in the length of life. They box, run, shoot, ride, row, and sail from pole to pole. They eat, and drink, and live jolly in the open air, putting a bar of solid sleep between day and day. They walk and ride as fast as they can, their head bent forward, as if urged on some pressing affair. The French say, that Englishmen in the street always walk straight before them like mad dogs. Men and women walk with infatuation. As soon as he can handle a gun, hunting is the fine art of every Englishman of condition. They are the most voracious people of prey that ever existed. Every season turns out the aristocracy into the country, to shoot and fish. The more vigorous run out of the island to Europe, to America, to Asia, to Africa, and Australia, to hunt with fury by gun, by trap, by harpoon, by lasso, with dog, with horse, with elephant, or with dromedary, all the game that is in nature. These men have written the game-books of all countries, as Hawker, Scrope, Murray, Herbert, Maxwell, Cumming, and a host of travellers. The people at home are addicted to boxing, running, leaping, and rowing matches.

I suppose the dogs and horses must be thanked for the fact that the men have muscles almost as tough and supple as their own. If in every efficient man, there is first a fine animal, in the English face it is of the best breed, a wealthy, juicy, broad-chested creature, steeped in ale and good cheer, and a little overloaded by his flesh. Men of animal nature rely, like animals, on their instincts. The Englishman associates well with dogs and horses. His attachment to the horse arises from

the courage and address required to manage it. The horse finds out who is afraid of it, and does not disguise its opinion. Their young boiling clerks and lusty collegians like the company of horses better than the company of professors. I suppose, the horses are better company for them. The horse has more uses than Buffon noted. If you go into the streets, every driver in bus or dray is a bully, and, if I wanted a good troop of soldiers, I should recruit among the stables. Add a certain degree of refinement to the vivacity of these riders, and you obtain the precise quality which makes the men and women of polite society formidable.

They come honestly by their horsemanship, with *Hengst* and *Horsa* for their Saxon founders. The other branch of their race had been Tartar nomads. The horse was all their wealth. The children were fed on mares' milk. The pastures of Tartary were still remembered by the tenacious practice of the Norsemen to eat horseflesh at religious feasts. In the Danish invasions, the marauders seized upon horses where they landed, and were at once converted into a body of expert cavalry.

At one time, this skill seems to have declined. Two centuries ago, the English horse never performed any eminent service beyond the seas; and the reason assigned was, that the genius of the English hath always more inclined them to foot-service, as pure and proper manhood, without any mixture; whilst, in a victory on horseback, the credit ought to be divided betwixt the man and his horse. But in two hundred years, a change has taken place. Now, they boast that they understand horses better than any other people in the world, and that their horses are become their second selves.

"William the Conqueror being," says Camden, "better affected to beasts than to men, imposed heavy fines and punishments on those that should meddle with his game." The Saxon Chronicle says, "he loved the tall deer as if he were their father." And rich Englishmen have followed his example, according to their ability, ever since, in encroaching on the tillage and commons with their game-preserves. It is a proverb in England, that it is safer to shoot a man than a hare. The severity of the game-laws certainly indicates an extravagant sympathy of the nation with horses and hunters. The gentlemen are always on horseback, and have brought horses to an ideal perfection—the English racer is a factitious breed. A score or two of mounted gentlemen may frequently be seen running like centaurs down a hill nearly as steep as the roof of a house. Every inn-room is lined with pictures of races, telegraphs communicate, every hour, tidings of the heats from Newmarket and Ascot: and the House of Commons adjourns over the Derby Day.

V.—ABILITY.

THE Saxon and the Northman are both Scandinavians. History does not allow us to fix the limits of the application of these names with any accuracy; but from the residence of a portion of these people in France, and from some effect of that powerful soil on their blood and manners, the Norman has come popularly to represent in England the aristocratic—and the Saxon the democratic principle. And though, I doubt not, the nobles are of both tribes, and the workers of both, yet we are forced to use the names a little mythically, one to represent the worker, and the other the enjoyer.

The island was a prize for the best race. Each of the dominant races tried its fortune in turn. The Phœnician, the Celt, and the Goth, had already got in. The Roman came, but in the very day when his fortune culminated. He looked in the eyes of a new people that was to supplant his own. He disembarked his legions, erected his camps and towers—presently he heard bad news from Italy, and worse and worse, every year; at last, he made a handsome complement of roads and walls, and departed. But the Saxon seriously settled in the land, builded, tilled, fished, and traded, with German truth and adhesiveness. The Dane came, and divided with him. Last of all, the Norman, or French-Dane, arrived, and formally conquered, harried, and ruled the kingdom. A century later, it came out that the Saxon had the most bottom and longevity, had managed to make the victor speak the language and accept the law and usage of the victim; forced the barons to dictate Saxon terms to Norman Kings; and, step by step, got all the essential securities of civil liberty invented and confirmed. The genius of the race and the genius of the place conspired to this effect. The island is lucrative to free labour, but not worth possession on other terms. The race was so intellectual, that a feudal or military tenure could not last longer than the war. The power of the Saxon-Danes, so thoroughly beaten in the war, that the name of English and villein were synonymous, yet so vivacious as to extort charters from the Kings, stood on the strong personality of these people. Sense and economy must rule in a world which is made of sense and economy, and the banker, with his seven *per cent*, drives the Earl out of his castle. A nobility of soldiers cannot keep down a commonalty of shrewd scientific persons. What signifies a pedigree of a hundred links, against a cotton-

spinner with steam in his mill; or, against a company of broad-shouldered Liverpool merchants, for whom Stephenson and Brunel are contriving locomotives and a tubular bridge?

These Saxons are the hands of mankind. They have the taste for toil, a distaste for pleasure or repose, and the telescopic appreciation of distant gain. They are the wealth-makers—and by dint of mental faculty, which has its own conditions. The Saxon works after liking, or, only for himself, and to set him at work, and to begin to draw his monstrous values out of barren Britain, all dishonour, fret, and barrier must be removed, and then his energies begin to play.

The Scandinavian fancied himself surrounded by Trolls—a kind of goblin men, with vast power of work and skilful production—divine stevedores, carpenters, reapers, smiths, and masons, swift to reward every kindness done them, with gifts of gold and silver. In all English history, this dream comes to pass. Certain Trolls or working brains, under the names of Alfred, Bede, Caxton, Bracton, Camden, Drake, Selden, Dugdale, Newton, Gibbon, Brindley, Watt, Wedgwood, dwell in the troll-mounts of Britain, and turn the sweat of their face to power and renown.

If the race is good, so is the place. Nobody landed on this spell-bound island with impunity. The enchantments of barren shingle and rough weather, transformed every adventurer into a labourer. Each vagabond that arrived bent his neck to the yoke of gain, or found the air too tense for him. The strong survived, the weaker went to the ground. Even the pleasure-hunters and sots of England are of a tougher texture. A hard temperament had been formed by Saxon and Saxon-Dane; and such of these French or Normans as could reach it, were naturalized in every sense.

All the admirable expedients or means hit upon in England, must be looked at as growths or irresistible offshoots of the expanding mind of the race. A man of that brain thinks and acts thus; and his neighbour, being afflicted with the same kind of brain, though he is rich, and called a Baron, or a Duke, thinks the same thing, and is ready to allow the justice of the thought and act in his retainer or tenant, though sorely against his baronial or ducal will.

The island was renowned in antiquity for its breed of mastiffs, so fierce, that when their teeth were set, you must cut their heads off to part them. The man was like his dog. The people have that nervous bilious temperament, which is known by medical men to resist every means employed to make its possessor subservient to the will of others. The English game is main force to main force, the planting of foot to foot, fair play and open field—a rough tug without trick or

dodging, till one or both come to pieces. King Ethelwulf spoke the language of his race, when he planted himself at Wimborne, and said, 'he would do one of two things, or there live, or there lie.' They hate craft and subtlety. They neither poison, nor waylay, nor assassinate; and, when they have pounded each other to a poultrice, they will shake hands and be friends for the remainder of their lives.

You shall trace these Gothic touches at school, at country fairs, at the hustings, and in Parliament. No artifice, no breach of truth and plain dealing—not so much as secret ballot, is suffered in the island. In Parliament, the tactics of the Opposition is to resist every step of the Government, by a pitiless attack: and in a bargain, no prospect of advantage is so dear to the merchant, as the thought of being tricked is mortifying.

Sir Kenelm Digby, a courtier of Charles and James, who won the sea-fight of Scanderoun, was a model Englishman in his day. "His person was handsome and gigantic, he had so graceful elocution and noble address, that, had he been dropt out of the clouds in any part of the world, he would have made himself respected: he was skilled in six tongues, and master of arts and arms."* Sir Kenelm wrote a book, "Of Bodies and of Souls," in which he propounds, that "syllogisms do breed or rather are all the variety of man's life. They are the steps by which we walk in all our businesses. Man, as he is man, doth nothing else but weave such chains. Whatsoever he doth, swerving from this work, he doth as deficient from the nature of man: and, if he do aught beyond this, by breaking out into divers sorts of exterior actions, he findeth, nevertheless, in this linked sequel of simple discourses, the art, the cause, the rule, the bounds, and the model of it."†

There spoke the genius of the English people. There is a necessity on them to be logical. They would hardly greet the good that did not logically fall—as if it excluded their own merit, or shook their understandings. They are jealous of minds that have much facility of association, from an instinctive fear that the seeing many relations to their thought might impair this serial continuity and lucrative concentration. They are impatient of genius, or of minds addicted to contemplation, and cannot conceal their contempt for sallies of thought, however lawful, whose steps they cannot count by their wonted rule. Neither do they reckon better a syllogism that ends in syllogism. For they have a supreme eye to facts, and theirs is a logic that brings salt to soup, hammer to nail, oar to boat, the logic of cooks, carpenters, and chemists,

* Antony Wood.

† Man's Soule, p. 29.

following the sequence of nature, and one on which words make no impression. Their mind is not dazzled by its own means, but locked and bolted to results. They love men, who, like Samuel Johnson, a doctor in the schools, would jump out of his syllogism the instant his major proposition was in danger, to save that, at all hazards. Their practical vision is spacious, and they can hold many threads without entangling them. All the steps they orderly take; but with the high logic of never confounding the minor and major proposition; keeping their eye on their aim, in all the complicity and delay incident to the several series of means they employ. There is room in their minds for this and that—a science of degrees. In the courts, the independence of the judges and the loyalty of the suitors are equally excellent. In Parliament, they have hit on that capital invention of freedom, a constitutional opposition. And when courts and parliament are both deaf, the plaintiff is not silenced. Calm, patient, his weapon of defence from year to year is the obstinate reproduction of the grievance, with calculations and estimates. But, meantime, he is drawing numbers and money to his opinion, resolved that if all remedy fails, right of revolution is at the bottom of his charter-box. They are bound to see their measure carried, and stick to it through ages of defeat.

Into this English logic, however, an infusion of justice enters, not so apparent in other races—a belief in the existence of two sides, and the resolution to see fair play. There is on every question, an appeal from the assertion of the parties, to the proof of what is asserted. They are impious in their scepticism of a theory, but kiss the dust before a fact. Is it a machine, is it a charter, is it a boxer in the ring, is it a candidate on the hustings—the universe of Englishmen will suspend their judgment, until the trial can be had. They are not to be led by a phrase, they want a working plan, a working machine, a working constitution, and will sit out the trial, and abide by the issue, and reject all preconceived theories. In politics they put blunt questions, which must be answered; who is to pay the taxes? what will you do for trade? what for corn? what for the spinner?

This singular fairness and its results strike the French with surprise. Philip de Commines says, "Now, in my opinion, among all the sovereignties I know in the world, that in which the public good is best attended to, and the least violence exercised on the people, is that of England." Life is safe, and personal rights; and what is freedom, without security? whilst, in France, 'fraternity,' 'equality,' and 'indivisible unity,' are names for assassination. Montesquien said, "England is the freest country in the world. If a man in England

and as many enemies as hairs on his head, no harm would happen to him."

Their self-respect, their faith in causation, and their realistic logic or coupling of means to ends, have given them the leadership of the modern world. Montesquien said, "No people have true common sense but those who are born in England." This common sense is a perception of all the conditions of our earthly existence, of laws that can be stated, and of laws that cannot be stated, or that are learned only by practice, in which allowance for friction is made. They are impious in their scepticism of theory, and in high departments they are cramped and sterile. But the unconditional surrender to facts, and the choice of means to reach their ends, are as admirable as with ants and bees.

The bias of the nation is a passion for utility. They love the lever, the screw, and pulley, the Flanders draught-horse, the waterfall, wind-mills, tide-mills; the sea and the wind to bear their freight ships. More than the diamond Koh-i-noor, which glitters among their crown jewels, they prize that dull pebble which is wiser than a man, whose poles turn themselves to the poles of the world, and whose axis is parallel to the axis of the world. Now, their toys are steam and galvanism. They are heavy at the fine arts, but adroit at the coarse; not good in jewelry or mosaics, but the best iron-masters, colliers, wool-combers, and tanners, in Europe. They apply themselves to agriculture, to draining, to resisting encroachments of sea, wind, travelling sands, cold and wet subsoil; to fishery, to manufacture of indispensable staples—salt, plumbago, leather, wool, glass, pottery, and brick—to bees and silkworms;—and by their steady combinations they succeed. A manufacturer sits down to dinner in a suit of clothes which was wool on a sheep's back at sunrise. You dine with a gentleman on venison, pheasant, quail, pigeons, poultry, mushrooms, and pine-apples, all the growth of his estate. They are neat husbands for ordering all their tools pertaining to house and field. All are well kept. There is no want and no waste. They study use and fitness in their building, in the order of their dwellings, and in their dress. The Frenchman invented the ruffle, the Englishman added the shirt. The Englishman wears a sensible coat buttoned to the chin, of rough but solid and lasting texture. If he is a lord, he dresses a little worse than a commoner. They have diffused the taste for plain substantial hats, shoes, and coats, through Europe. They think him the best-dressed man, whose dress is so fit for his use that you cannot notice or remember to describe it.

They secure the essentials in their diet, in their arts, and manufactures. Every article of cutlery shows, in its shape,

thought and long experience of workmen. They put the expense in the right place, as, in their sea-steamers, in the solidity of the machinery and the strength of the boat. The admirable equipment of their Arctic ships carries London to the pole. They build roads, aqueducts, warm and ventilate houses. And they have impressed their directness and practical habit on modern civilization.

In trade, the Englishman believes that nobody breaks who ought not to break; and that if he do not make trade everything, it will make him nothing; and acts on this belief. The spirit of system, attention to details, and the subordination of details, or, the not driving things too finely (which is charged on the Germans), constitute that despatch of business, which makes the mercantile power of England.

In war, the Englishman looks to his means. He is of the opinion of Civilis, his German ancestor, whom Tacitus reports as holding "that the gods are on the side of the strongest;"—a sentence which Bonaparte unconsciously translated, when he said, "that he had noticed that Providence always favoured the heaviest battalion." Their military science propounds that if the weight of the advancing column is greater than that of the resisting, the latter is destroyed. Therefore Wellington, when he came to the army in Spain, had every man weighed, first with accoutrements, and then without; believing that the force of an army depended on the weight and power of the individual soldiers, in spite of cannon. Lord Palmerston told the House of Commons, that more care is taken of the health and comfort of English troops than of any other troops in the world; and that, hence the English can put more men into the rank, on the day of action, on the field of battle, than any other army. Before the bombardment of the Danish forts in the Baltic, Nelson spent day after day, himself in the boats, on the exhausting service of sounding the channel. Clerk of Eldin's celebrated manœuvre of breaking the line of sea-battle, and Nelson's feat of *doubling*, or stationing his ships one on the outer bow, and another on the outer quarter of each of the enemy's, were only translations into naval tactics of Bonaparte's rule of concentration. Lord Collingwood was accustomed to tell his men, that, if they could fire three well-directed broadsides in five minutes, no vessel could resist them; and, from constant practice, they came to do it in three minutes and a half.

But conscious that no race of better men exists, they rely most on the simplest means; and do not like ponderous and difficult tactics, but delight to bring the affair hand to hand, where the victory lies with the strength, courage, and endurance of the individual combatants. They adopt every improvement

in rig, in motor, in weapons, but they fundamentally believe that the best stratagem in naval war, is to lay your ship close alongside of the enemy's ship, and bring all your guns to bear on him, until you or he go to the bottom. This is the old fashion, which never goes out of fashion, neither in nor out of England.

It is not usually a point of honour, nor a religious sentiment, and never any whim that they will shed their blood for; but usually property, and right measured by property, that breeds revolution. They have no Indian taste for a tomahawk-dance, no French taste for a badge or a proclamation. The Englishman is peaceably minding his business, and earning his day's wages. But if you offer to lay hand on his day's wages, on his cow, or his right in common, or his shop, he will fight to the Judgment. Magna-charta, jury-trial, *habeas-corpus*, star-chamber, ship-money, Popery, Plymouth-colony, American Revolution, are all questions involving a yeoman's right to his dinner, and, except as touching that, would not have lashed the British nation to rage and revolt.

Whilst they are thus instinct with a spirit of order, and of calculation, it must be owned they are capable of larger views; but the indulgence is expensive to them, costs great crises, or accumulations of mental power. In common, the horse works best with blinders. Nothing is more in the line of English thought, than our unvarnished Connecticut question, "Pray, sir, how do you get your living when you are at home?" The questions of freedom, of taxation, of privilege, are money questions. Heavy fellows, steeped in beer and fleshpots, they are hard of hearing and dim of sight. Their drowsy minds need to be flagellated by war and trade and politics and persecution. They cannot well read a principle, except by the light of fagots and of burning towns.

Tacitus says of the Germans, "powerful only in sudden efforts, they are impatient of toil and labour." This highly-destined race, if it had not somewhere added the chamber of patience to its brain, would not have built London. I know not from which of the tribes and temperaments that went to the composition of the people this tenacity was supplied, but they clinch every nail they drive. They have no running for luck, and no immoderate speed. They spend largely on their fabric, and await the slow return. Their leather lies tanning seven years in the vat. At Rogers's mills, in Sheffield, where I was shown the process of making a razor and a penknife, I was told there is no luck in making good steel; that they make no mistakes, every blade in the hundred and in the thousand is good. And that is characteristic of all their work—no more is attempted than is done.

When Thor and his companions arrive at Utgard, he is told that "nobody is permitted to remain here, unless he understand some art, and excel in it all other men." The same question is still put to the posterity of Thor. A nation of labourers, every man is trained to some one art or detail, and aims at perfection in that; not content unless he has something in which he thinks he surpasses all other men. He would rather not do anything at all, than not do it well. I suppose no people have such thoroughness;—from the highest to the lowest, every man meaning to be master of his art.

"To show capacity," a Frenchman described as the end of a speech in debate: "no," said an Englishman, "but to set your shoulder at the wheel—to advance the business." Sir Samuel Romilly refused to speak in popular assemblies, confining himself to the House of Commons, where a measure can be carried by a speech. The business of the House of Commons is conducted by a few persons, but these are hard-worked. Sir Robert Peel "knew the Blue Books by heart." His colleagues and rivals carry Hansard in their heads. The high civil and legal offices are not beds of ease, but posts which exact frightful amounts of mental labour. Many of the great leaders, like Pitt, Canning, Castlereagh, Romilly, are soon worked to death. They are excellent judges in England of a good worker, and when they find one, like Clarendon, Sir Philip Warwick, Sir William Coventry, Ashley, Burke, Thurlow, Mansfield, Pitt, Eldon, Peel, or Russell, there is nothing too good or too high for him.

They have a wonderful heat in the pursuit of a public aim. Private persons exhibit, in scientific and antiquarian researches, the same pertinacity as the nation showed in the coalitions in which it yoked Europe against the empire of Bonaparte, one after the other defeated, and still renewed, until the sixth hurled him from his seat.

Sir John Herschel, in completion of the work of his father, who had made the catalogue of the stars of the northern hemisphere, expatriated himself for years at the Cape of Good Hope, finished his inventory of the southern heaven, came home, and redacted it in eight years more;—a work whose value does not begin until thirty years have elapsed, and thenceforward a record to all ages of the highest import. The Admiralty sent out the Arctic expeditions year after year, in search of Sir John Franklin, until, at last, they have threaded their way through polar pack and Behring's Straits, and solved the geographical problem. Lord Elgin, at Athens, saw the imminent ruin of the Greek remains, set up his scaffoldings, in spite of epigrams, and, after five years' labour to collect them, got his marbles on shipboard. The ship struck a rock,

100916

and went to the bottom. He had them all fished up, by divers, at a vast expense, and brought to London; not knowing that Haydon, Fuseli, and Canova, and all good heads in all the world, were to be his applauders. In the same spirit, were the excavation and research by Sir Charles Fellowes, for the Xanthian monument; and of Layard, for his Nineveh sculptures.

The nation sits in the immense city they have builded, a London extended into every man's mind, though he live in Van Diemen's Land or Capetown. Faithful performance of what is undertaken to be performed, they honour in themselves, and exact in others, as certificate of equality with themselves. The modern world is theirs. They have made and make it day by day. The commercial relations of the world are so intimately drawn to London, that every dollar on earth contributes to the strength of the English government. And if all the wealth in the planet should perish by war or deluge, they know themselves competent to replace it.

They have approved their Saxon blood, by their sea-going qualities; their descent from Odin's smiths, by their hereditary skill in working in iron; their British birth, by husbandry and immense wheat harvests; and justified their occupancy of the centre of habitable land, by their supreme ability and cosmopolitan spirit. They have tilled, builded, forged, spun, and woven. They have made the island a thoroughfare; and London a shop, a law-court, a record-office, and scientific bureau, inviting to strangers; a sanctuary to refugees of every political and religious opinion; and such a city, that almost every active man, in any nation, finds himself, at one time or other, forced to visit it.

In every path of practical activity, they have gone even with the best. There is no secret of war, in which they have not shown mastery. The steam-chamber of Watt, the locomotive of Stephenson, the cotton-mule of Roberts, perform the labour of the world. There is no department of literature, of science, or of useful art, in which they have not produced a first-rate book. It is England, whose opinion is waited for on the merit of a new invention, an improved science. And in the complications of the trade and politics of their vast empire, they have been equal to every exigency, with counsel and with conduct. Is it their luck, or is it in the chambers of their brain,—it is their commercial advantage, that whatever light appears in better method or happy invention, breaks out in *their race*. They are a family to which a destiny attaches, and the Banshee has sworn that a male heir shall never be wanting. They have a wealth of men to fill important posts, and the vigilance of party criticism insures the selection of a competent person.

A proof of the energy of the British people, is the highly artificial construction of the whole fabric. The climate and geography, I said, were factitious, as if the hands of man had arranged the conditions. The same character pervades the whole kingdom. Bacon said, "Rome was a state not subject to paradoxes;" but England subsists by antagonisms and contradictions. The foundations of its greatness are the rolling waves; and from first to last, it is a museum of anomalies. This foggy and rainy country furnishes the world with astronomical observations. Its short rivers do not afford water-power, but the land shakes under the thunder of the mills. There is no gold mine of any importance, but there is more gold in England than in all other countries. It is too far north for the culture of the vine, but the wines of all countries are in its docks. The French Comte de Lauraguais said, "no fruit ripens in England but a baked apple;" but oranges and pine-apples are as cheap in London as in the Mediterranean. The *Mark-Lane Express*, or the *Custom House Returns* bear out to the letter the taunt of Pope,

"Let India boast her palms, nor envy we
The weeping amber, nor the spicy tree.
While, by our oaks, those precious loads are borne,
And realms commanded which those trees adorn."

The native cattle are extinct, but the island is full of artificial breeds. The agriculturist Bakewell created sheep and cows and horses to order, and breeds in which everything was omitted but what is economical. The cow is sacrificed to her bag, the ox to his sirloin. Stall-feeding makes sperm-mills of the cattle, and converts the stable to a chemical factory. The rivers, lakes, and ponds, too much fished, or obstructed by factories, are artificially filled with the eggs of salmon, turbot and herring.

Chat Moss and the fens of Lincolnshire and Cambridgeshire are unhealthy and too barren to pay rent. By cylindrical tiles, and gutta percha tubes, five millions of acres of bad land have been drained and put on equality with the best, for rapiculture and grass. The climate too, which was already believed to have become milder and drier by the enormous consumption of coal, is so far reached by this new action, that fogs and storms are said to disappear. In due course, all England will be drained, and rise a second time out of the waters. The latest step was to call in the aid of steam to agriculture. Steam is almost an Englishman. I do not know but they will send him to Parliament, next, to make laws. He weaves, forges, saws, pounds, fans, and now he must pump, grind, dig, and plough for the farmer. The markets created by the manu-

facturing population have erected agriculture into a great thriving and spending industry. The value of the houses in Britain is equal to the value of the soil. Artificial aids of all kinds are cheaper than the natural resources. No man can afford to walk, when the parliamentary train carries him for a penny a mile. Gas-burners are cheaper than daylight in numberless floors in the cities. All the houses in London buy their water. The English trade does not exist for the exportation of native products, but on its manufactures, or the making well everything which is ill made elsewhere. They make ponchos for the Mexican, bandannas for the Hindoo, ginseng for the Chinese, beads for the Indian, laces for the Flemings, telescopes for astronomers, cannons for Kings.

The Board of Trade caused the best models of Greece and Italy to be placed within the reach of every manufacturing population. They caused to be translated from foreign languages and illustrated by elaborate drawings, the most approved works of Munich, Berlin, and Paris. They have ransacked Italy to find new forms, to add a grace to the products of their looms, their potteries, and their foundries.*

The nearer we look, the more artificial is their social system. Their law is a network of fictions. Their property, a scrip or certificate of right to interest on money that no man ever saw. Their social classes are made by statute. Their ratios of power and representation are historical and legal. The last Reform-bill took away political power from a mound, a ruin, and a stone-wall, whilst Birmingham and Manchester, whose mills paid for the wars of Europe, had no representative. Purity in the elective Parliament is secured by the purchase of seats.† Foreign power is kept by armed colonies: power at home, by a standing army of police. The pauper lives better than the free labourer; the thief better than the pauper; and the transported felon better than the one under imprisonment. The crimes are factitious, as smuggling, poaching, non-conformity, heresy and treason. Better, they say in England, kill a man than a hare. The sovereignty of the seas is maintained by the impressment of seamen. "The impressment of seamen," said Lord Eldon, "is the life of our navy." Solvency is maintained by means of a national debt, on the principle, "if you will not lend me the money, how can I pay you?" For the administration of justice, Sir Samuel Romilly's expedient for clearing the arrears of business in Chancery, was the Chancellor's staying away entirely from his court. Their system of

* See Memorial of H. Greenough, p. 66, New York, 1853.

† Sir S. Romilly, purest of English patriots, decided that the only independent mode of entering Parliament was to buy a seat, and he bought Holsham.

education is factitious. The Universities galvanize dead languages into a semblance of life. Their church is artificial. The manners and customs of society are artificial;—made-up men with made-up manners;—and thus the whole is Birminghamized, and we have a nation whose existence is a work of art;—a cold, barren, almost arctic isle, being made the most fruitful, luxurious, and imperial land in the whole earth.

Man in England submits to be a product of political economy. On a bleak moor, a mill is built, a banking-house is opened, and men come in, as water in a sluice-way, and towns and cities rise. Man is made as a Birmingham button. The rapid doubling of the population dates from Watt's steam-engine. A landlord, who owns a province, says, "the tenantry are unprofitable; let me have sheep." He unroofs the houses, and ships the population to America. The nation is accustomed to the instantaneous creation of wealth. It is the maxim of their economists, "that the greater part in value of the wealth now existing in England, has been produced by human hands within the last twelve months." Meantime, three or four days' rain will reduce hundreds to starving in London.

One secret of their power is their mutual good understanding. Not only good minds are born among them, but all the people have good minds. Every nation has yielded some good wit, if, as has chanced to many tribes, only one. But the intellectual organization of the English admits a communicableness of knowledge and ideas among them all. An electric touch by any of their national ideas, melts them into one family, and brings the hoards of power which their individuality is always hiving, into use and play for all. Is it the smallness of the country, or is it the pride and affection of race,—they have solidarity, or responsibility, and trust in each other.

Their minds, like wool, admit of a dye which is more lasting than the cloth. They embrace their cause with more tenacity than their life. Though not military, yet every common subject by the poll is fit to make a soldier of. These private reserved mute family-men can adopt a public end with all their heat, and this strength of affection makes the romance of their heroes. The difference of rank does not divide the national heart. The Danish poet Ohlenschläger complains, that who writes in Danish, writes to two hundred readers. In Germany, there is one speech for the learned, and another for the masses, to that extent, that, it is said, no sentiment or phrase from the works of any great German writer is ever heard among the lower classes. But in England, the language of the noble is the language of the poor. In Parliament, in pulpits, in theatres, when the speakers rise to thought and passion, the language

becomes idiomatic; the people in the street best understand the best words. And their language seems drawn from the Bible, the common law, and the works of Shakespeare, Bacon, Milton, Pope, Young, Cowper, Burns, and Scott. The island has produced two or three of the greatest men that ever existed, but they were not solitary in their own time. Men quickly embodied what Newton found out, in Greenwich observatories, and practical navigation. The boys know all that Hutton knew of strata, or Dalton of atoms, or Harvey of blood-vessels; and these studies, once dangerous, are in fashion. So what is invented or known in agriculture, or in trade, or in war, or in art, or in literature, and antiquities. A great ability, not amassed on a few giants, but poured into the general mind, so that each of them could at a pinch stand in the shoes of the other; and they are more bound in character, than differenced in ability or in rank. The labourer is a possible lord. The lord is a possible basket-maker. Every man carries the English system in his brain, knows what is confided to him, and does therein the best he can. The chancellor carries England on his mace, the midshipman at the point of his dirk, the smith on his hammer, the cook in the bowl of his spoon; the postilion cracks his whip for England, and the sailor times his oars to "God save the King!" The very felons have their pride in each other's English stanchness. In politics and in war, they hold together as by hooks of steel. The charm in Nelson's history, is, the unselfish greatness; the assurance of being supported to the uttermost by those whom he supports to the uttermost. Whilst they are some ages ahead of the rest of the world in the art of living; whilst in some directions they do not represent the modern spirit, but constitute it—this vanguard of civility and power they coldly hold, marching in phalanx, lockstep, foot after foot, file after file of heroes, ten thousand deep.

VI.—MANNERS.

I FIND the Englishman to be him of all men who stands firmest in his shoes. They have in themselves what they value in their horses, mettle and bottom. On the day of my arrival at Liverpool, a gentleman, in describing to me the Lord Lieutenant of Ireland, happened to say, "Lord Clarendon has pluck like a cock, and will fight till he dies;" and, what I heard first I heard last; the one thing the English value as pluck. The cabmen have it; the merchants have it; the bishops have it; the women have it; the journals have it; the

Times newspaper. they say, is the pluckiest thing in England, and Sydney Smith had made it a proverb, that little Lord John Russell, the minister, would take the command of the Channel fleet to-morrow.

They require you to dare to be of your own opinion, and they hate the practical cowards who cannot in affairs answer directly yes or no. They dare to displease, nay, they will let you break all the commandments, if you do it natively, and with spirit. You must be somebody; then you may do this or that, as you will.

Machinery has been applied to all work, and carried to such perfection, that little is left for the men but to mind the engines and feed the furnaces. But the machines require punctual service, and, as they never tire, they prove too much for their tenders. Mines, forges, mills, breweries, railroads, steam-pump, steam-plough, drill of regiments, drill of police, rule of court, and shop-rule, have operated to give a mechanical regularity to all the habit and action of men. A terrible machine has possessed itself of the ground, the air, the men and women, and hardly even thought is free.

The mechanical might and organization requires in the people constitution and answering spirits: and he who goes among them must have some weight of metal. At last, you take your hint from the fury of life you find, and say, one thing is plain, this is no country for fainthearted people; don't creep about diffidently; make up your mind; take your own course, and you shall find respect and furtherance.

It requires, men say, a good constitution to travel in Spain. I say as much of England, for other cause, simply on account of the vigour and brawn of the people. Nothing but the most serious business, could give one any counterweight to these Baresarks, though they were only to order eggs and muffins for their breakfast. The Englishman speaks with all his body. His elocution is stomachic—as the American's is labial. The Englishman is very petulant and precise about his accommodation at inns, and on the roads; a quiddle about his toast and his chop, and every species of convenience, and loud and pungent in his expressions of impatience at any neglect. His vivacity betrays itself, at all points, in his manners, in his respiration, and the inarticulate noises he makes in clearing the throat;—all significant of burly strength. He has stamina; he can take the initiative in emergencies. He has that *aplomb*, which results from a good adjustment of the moral and physical nature, and the obedience of all the powers to the will; as if the axes of his eyes were united to his backbone, and only moved with the trunk.

This vigour appears in the incuriosity, and stony neglect, each

of every other. Each man walks, eats, drinks, shaves, dresses, gesticulates, and, in every manner, acts and suffers without reference to the bystanders, in his own fashion, only careful not to interfere with them, or annoy them; not that he is trained to neglect the eyes of his neighbours—he is really occupied with his own affair, and does not think of them. Every man in this polished country consults only his convenience, as much as a solitary pioneer in Wisconsin. I know not where any personal eccentricity is so freely allowed, and no man gives himself any concern with it. An Englishman walks in a pouring rain, swinging his closed umbrella like a walking-stick; wears a wig, or a shawl, or a saddle, or stands on his head, and no remark is made. And as he has been doing this for several generations, it is now in the blood.

In short, every one of these islanders is an island himself, safe, tranquil, incommunicable. In a company of strangers, you would think him deaf: his eyes never wander from his table and newspaper. He is never betrayed into any curiosity or unbecoming emotion. They have all been trained in one severe school of manners, and never put off the harness. He does not give his hand. He does not let you meet his eye. It is almost an affront to look a man in the face, without being introduced. In mixed or in select companies they do not introduce persons; so that a presentation is a circumstance as valid as a contract. Introductions are sacraments. He withholds his name. At the hotel he is hardly willing to whisper it to the clerk at the book-office. If he give you his private address on a card, it is like an avowal of friendship; and his bearing, on being introduced, is cold, even though he is seeking your acquaintance, and is studying how he shall serve you.

It was an odd proof of this impressive energy, that, in my lectures, I hesitated to read and threw out for its impertinence many a disparaging phrase, which I had been accustomed to spin, about poor, thin, unable mortals;—so much had the fine physique and the personal vigour of this robust race worked on my imagination.

I happened to arrive in England at the moment of a commercial crisis. But it was evident, that, let who will fail, England will not. These people have sat here a thousand years, and here will continue to sit. They will not break up, or arrive at any desperate revolution, like their neighbours; for they have as much energy, as much continence of character as they ever had. The power and possession which surround them are their own creation, and they exert the same commanding industry at this moment.

They are positive, methodical, cleanly, and formal, loving routine, and conventional ways; loving truth and religion, to

be sure, but inexorable on points of form. All the world praises the comfort and private appointments of an English inn, and of English households. You are sure of neatness and of personal decorum. A Frenchman may possibly be clean; an Englishman is conscientiously clean. A certain order and complete propriety is found in his dress and in his belongings.

Born in a harsh and wet climate, which keeps him in-doors whenever he is at rest, and being of an affectionate and loyal temper, he dearly loves his house. If he is rich, he buys a demesne, and builds a hall; if he is in middle condition, he spares no expense on his house. Without, it is all planted: within, it is wainscoted, carved, curtained, hung with pictures, and filled with good furniture. 'Tis a passion which survives all others, to deck and improve it. Hither he brings all that is rare and costly, and with the national tendency to sit fast in the same spot for many generations, it comes to be, in the course of time, a museum of heirlooms, gifts, and trophies of the adventures and exploits of the family. He is very fond of silver plate, and, though he have no gallery of portraits of his ancestors, he has of their punch-bowls and porringers. Incredible amounts of plate are found in good houses, and the poorest have some spoon or saucepan, gift of a godmother, saved out of better times.

An English family consists of a few persons, who, from youth to age, are found revolving within a few feet of each other, as if tied by some invisible ligature, tense as that cartilage which we have seen attaching the two Siamese. England produces under favourable conditions of ease and culture the finest women in the world. And as the men are affectionate and true-hearted, the women inspire and refine them. Nothing can be more delicate without being fantastical, nothing more firm and based in nature and sentiment, than the courtship and mutual carriage of the sexes. The song of 1596 says, "The wife of every Englishman is counted blest." The sentiment of Imogen in *Cymbeline* is copied from English nature; and not less the Portia of Brutus, the Kate Percy, and the Desdemona. The romance does not exceed the height of noble passion in Mrs. Lucy Hutchinson, or in Lady Russell, or even as one discerns through the plain prose of Pepys's Diary, the sacred habit of an English wife. Sir Samuel Romilly could not bear the death of his wife. Every class has its noble and tender examples.

Domesticity is the tap-root which enables the nation to branch wide and high. The motive and end of their trade and empire is to guard the independence and privacy of their homes. Nothing so much marks their manners as the con-

paid his debts, and though given to military intrigues, never not stir abroad for fear of public creditors. This taste for horse and parish merits has of course its dotting and foolish side. Mr. Cobbett attributes the huge popularity of Perceval, prime minister in 1810, to the fact that he was wont to go to church, every Sunday, with a large quarto gilt prayer-book under one arm, his wife hanging on the other, and followed by a long brood of children.

They keep their old customs, costumes, and pomps, their wig and mace, sceptre and crown. The middle ages still lurk in the streets of London. The Knights of the Bath take oath to defend injured ladies; the goldstick-in-waiting survives. They repeated the ceremonies of the eleventh century in the coronation of the present Queen. A hereditary tenure is natural to them. Offices, farms, trades, and traditions descend so. Their leases run for a hundred and a thousand years. Terms of service and partnership are life-long, or are inherited. "Holdsip has been with me," said Lord Eldon, "eight-and-twenty years, knows all my business and books." Antiquity of usage is sanction enough. Wordsworth says of the small freeholders of Westmoreland, "Many of these humble sons of the hills had a consciousness that the land which they tilled had for more than five hundred years been possessed by men of the same name and blood." The ship-carpenter in the public yards, my lord's gardener and porter, have been there for more than a hundred years, grandfather, father, and son.

The English power resides also in their dislike of change. They have difficulty in bringing their reason to act, and on all occasions use their memory first. As soon as they have rid themselves of some grievance, and settled the better practice, they make haste to fix it as a finality, and never wish to hear of alteration more.

Every Englishman is an embryonic chancellor. His instinct is to search for a precedent. The favourite phrase of their law, is, "a custom whereof the memory of man runneth not back to the contrary." The barons say, "*Nobimus mutari*;" and the cockneys stifle the curiosity of the foreigner on the reason of any practice, with "Lord, sir, it was always so!" They hate innovation. Bacon told them, Time was the right reformer; Chatham, that "confidence was a plant of slow growth;" Canning, to "advance with the times;" and Wellington, that "habit was ten times nature." All their statesmen learn the irresistibility of the tide of custom, and have

invented many fine phrases to cover this slowness of perception, and prehensility of tail.

A sea-shell should be the crest of England, not only because it represents a power built on the waves, but also the hard finish of the men. The Englishman is finished like a cowry or a murex. After the spire and the spires are formed, or, with the formation, a juice exudes, and a hard enamel varnishes every part. The keeping of the proprieties is as indispensable as clean linen. No merit quite countervails the want of this, whilst this sometimes stands in lieu of all. "Tis in bad taste," is the most formidable word an Englishman can pronounce. But this japan costs them dear. There is a prose in certain Englishmen, which exceeds in wooden deadness all rivalry with other countrymen. There is a knell in the conceit and externality of their voice, which seems to say, *Leave all hope behind.* In this Gibraltar of propriety, mediocrity gets entrenched, and consolidated, and founded in adamant. An Englishman of fashion is like one of those souvenirs, bound in gold vellum, enriched with delicate engravings on thick hot-pressed paper, fit for the hands of ladies and princes, but with nothing in it worth reading or remembering.

A severe decorum rules the court and the cottage. When Thalberg, the pianist, was one evening performing before the Queen, at Windsor, in a private party, the Queen accompanied him with her voice. The circumstance took air, and all England shuddered from sea to sea. The indecorum was never repeated. Cold, repressive manners prevail. No enthusiasm is permitted except at the opera. They avoid everything marked. They require a tone of voice that excites no attention in the room. Sir Philip Sidney is one of the patron saints of England, of whom Wotton said, "His wit was the measure of congruity."

Pretension and vapouring are once for all distasteful. They keep to the other extreme of low tone in dress and manners. They avoid pretension and go right to the heart of the thing. They hate nonsense, sentimentalism, and high-flown expression; they use a studied plainness. Even Brummel their fop was marked by the severest simplicity in dress. They value themselves on the absence of everything theatrical in the public business, and on conciseness and going to the point, in private affairs.

In an aristocratical country, like England, not the Trial by Jury, but the dinner, is the capital institution. It is the mode of doing honour to a stranger, to invite him to eat—and has been for many hundred years. "And they think," says the Venetian traveller of 1500, "no greater honour can be conferred or received, 'han to invite others to eat with them, or to

be invited themselves, and they would sooner give five or six ducats to provide an entertainment for a person, than a great to assist him in any distress."* It is reserved to the end of the day, the family hour being generally six, in London, and, if any company is expected, one or two hours later. Every one dresses for dinner, in his own house, or in another man's. The guests are expected to arrive within half an hour of the time fixed by card of invitation, and nothing but death or mutilation is permitted to detain them. The English dinner is precisely the model on which our own are constructed in the Atlantic cities. The company sit one or two hours, before the ladies leave the table. The gentlemen remain over their wine an hour longer, and rejoin the ladies in the drawing-room, and take coffee. The dress-dinner generates a talent of table-talk which reaches great perfection: the stories are so good, that one is sure they must have been often told before, to have got such happy turns. Hither come all manner of clever projects, bits of popular science, of practical invention, of miscellaneous humour; political, literary, and personal news; railroads, horses, diamonds, agriculture, horticulture, pisciculture and wine.

English stories, bon-mots, and the recorded table-talk of their wits, are as good as the best of the French. In America, we are apt scholars, but have not yet attained the same perfection: for the range of nations from which London draws, and the steep contrasts of condition, create the picturesque in society, as broken country makes picturesque landscape, whilst our prevailing equality makes a prairie tameness: and secondly, because the usage of a dress-dinner every day at dark, has a tendency to hive and produce to advantage everything good. Much attrition has worn every sentence into a bullet. Also one meets now and then with polished men, who know everything, have tried everything, can do everything, and are quite superior to letters and science. What could they not, if only they would?

VII.—TRUTH.

THE Teutonic tribes have a national singleness of heart, which contrasts with the Latin races. The German name has a proverbial significance of sincerity and honest meaning. The arts bear testimony to it. The faces of clergy and laity in old sculptures and illuminated missals are charged with earnest belief. Add to this hereditary rectitude, the punctuality and precise dealing which commerce creates,

* "Religion of England." Printed by the Camden Society.

and you have the English truth and credit. The government strictly performs its engagements. The subjects do not understand trifling on its part. When any breach of promise occurred, in the old days of prerogative, it was resented by the people as an intolerable grievance. And, in modern times, any slipperiness in the government in political faith, or any epudiation or crookedness in matters of finance, would bring the whole nation to a committee of inquiry and reform. Private men keep their promises, never so trivial. Down goes the flying word on the tablets, and is indelible as Doomsday Book.

Their practical power rests on their national sincerity. Veracity derives from distinct, and marks superiority in organization. Nature has endowed some animals with cunning, as a compensation for strength withheld; but it has provoked the malice of all others, as if avengers of public wrong. In the nobler kinds, where strength could be afforded, her races are loyal to truth, as truth is the foundation of the social state. Beasts that make no truce with man, do not break faith with each other. 'Tis said, that the wolf, who makes a *cache* of his prey, and brings his fellows with him to the spot, if, on digging, it is not found, is instantly and unresistingly torn in pieces. English veracity seems to result on a sounder animal structure, as if they could afford it. They are blunt in saying what they think, sparing of promises, and they require plain-dealing of others. We will not have to do with a man in a mask. Let us know the truth. Draw a straight line, hit whom and where it will. Alfred, whom the affection of the nation makes the type of their race, is called by a writer of the Norman Conquest, the *truth-speaker*; *Alueredus veridicus*. Geoffrey of Monmouth says of King Aurelius, uncle of Arthur, that "above all things he hated a lie." The Northman Guttorm said to King Olaf, "it is royal work to fulfil royal words." The mottoes of their families are monitory proverbs, as, *Fare fac*—Say, do,—of the Fairfaxes; *Say and seal*, of the house of Fiennes; *Vero nil verius*, of the De Veres. To be king of their word, is their pride. When they unmask cant, they say, "The English of this is," &c.; and to give the lie is the extreme insult. The phrase of the lowest of the people is "honour-bright," and their vulgar praise, "his word is as good as his bond." They hate shuffling and equivocation, and the cause is damaged in the public opinion, on which any paltering can be fixed. Even Lord Chesterfield, with his French breeding, when he came to define a gentleman, declared that truth made his distinction: and nothing ever spoken by him would find so hearty a suffrage from his nation. The Duke of Wellington, who had the best right to say so, advises the

who, in the popular belief, are more polite than true. An Englishman understates, avoids the superlative, checks himself in compliments, alleging, that in the French language, one cannot speak without lying.

They love reality in wealth, power, hospitality, and do not easily learn to make a show, and take the world as it goes. They are not fond of ornaments, and if they wear them, they must be gems. They read gladly in old Fuller, that a lady, in the reign of Elizabeth, "would have as patiently digested a lie, as the wearing of false stones or pendants of counterfeit pearl." They have the earth-hunger, or preference for property in land, which is said to mark the Teutonic nations. They build of stone; public and private buildings are massive and durable. In comparing their ships, houses, and public offices with the American, it is commonly said that they spend a pound where we spend a dollar. Plain rich clothes, plain rich equipage, plain rich finish throughout their house and belongings, mark the English truth.

They confide in each other—English believes in English. The French feel the superiority of this probity. The Englishman is not springing a trap for his admiration, but is honestly minding his business. The Frenchman is vain. Madame de Stael says, that the English irritated Napoleon, mainly, because they have found out how to unite success with honesty. She was not aware how wide an application her foreign readers would give to the remark. Wellington discovered the ruin of Bonaparte's affairs, by his own probity. He augured ill of the empire, as soon as he saw that it was mendacious, and lived by war. If war do not bring in its sequel new trade, better agriculture and manufactures, but only games, fireworks, and spectacles, no prosperity could support it; much less a nation decimated for conscripts, and out of pocket, like France. So he drudged for years on his military works at Lisbon, and from this base at last extended his gigantic lines to Waterloo, believing in his countrymen and their syllogisms above all the rhodomontade of Europe.

At a St. George's festival, in Montreal, where I happened to be a guest, since my return home, I observed that the chairman complimented his compatriots, by saying, "they confided that wherever they met an Englishman, they found a man who would speak the truth." And one cannot think this festival fruitless, if, all over the world, on the 23rd of April, wherever two or three English are found, they meet to encourage each other in the nationality of veracity.

In the power of saying rude truth, sometimes in the lion's mouth, no men surpass them. On the King's birthday, when each Bishop was expected to offer the King a purse of gold, Latimer gave Henry VIII. a copy of the Vulgate, with a mark at the passage "Whoremongers and adulterers God will judge;" and they so honour stoutness in each other, that the King passed it over. They are tenacious of their belief, and cannot easily change their opinions to suit the hour. They are like ships with too much head on to come quickly about, nor will prosperity or even adversity be allowed to shake their habitual view of conduct. Whilst I was in London, M. Guizot arrived there on his escape from Paris, in February, 1848. Many private friends called on him. His name was immediately proposed as an honorary member of the Athenæum. M. Guizot was blackballed. Certainly, they knew the distinction of his name. But the Englishman is not fickle. He had really made up his mind, now for years as he read his newspaper, to hate and despise M. Guizot; and the altered position of the man as an illustrious exile, and a guest in the country, makes no difference to him, as it would instantly to an American.

They require the same adherence, thorough conviction and reality in public men. It is the want of character which makes the low reputation of the Irish members. "See them," they said, "one hundred and twenty-seven all voting like sheep, never proposing anything, and all but four voting the income tax"—which was an ill-judged concession of the Government, relieving Irish property from the burdens charged on English.

They have a horror of adventurers in or out of Parliament. The ruling passion of Englishmen, in these days, is, a terror of humbug. In the same proportion, they value honesty, stoutness, and adherence to your own. They like a man committed to his objects. They hate the French, as frivolous; they hate the Irish, as aimless; they hate the Germans, as professors. In February, 1848, they said, Look, the French King and his party fell for the want of a shot; they had not conscience to shoot, so entirely was the pith and heart of monarchy eaten out.

They attack their own politicians every day, on the same grounds, as adventurers. They love stoutness in standing for your right, in declining money or promotion that costs any concession. The barrister refuses the silk gown of Queen's Counsel, if his junior have it one day earlier. Lord Collingwood would not accept his medal for victory on 14th February, 1797, if he did not receive one for victory on 1st June, 1794: and the long witholden medal was accorded. When Castle-

reagh dissuaded Lord Wellington from going to to the King's levee, until the unpopular Cintra business had been explained, he replied, "You furnish me a reason for going. I will go to this, or I will never go to a King's levee." The radical mob at Oxford cried after the tory Lord Eldon, "There's old Eldon; cheer him; he never ratted." They have given the parliamentary nickname of *Trimmers* to the time-servers, whom English character does not love.*

They are very liable in their politics to extraordinary delusions, thus, to believe what stands recorded in the gravest books, that the movement of 10th April, 1848, was urged or assisted by foreigners: which, to be sure, is paralleled by the democratic whimsy in this country, which I have noticed to be shared by men sane on other points, that the English are at the bottom of the agitation of slavery, in American politics: and then again to the French popular legends on the subject of *perfidious Albion*. But suspicion will make fools of nations as of citizens.

A slow temperament makes them less rapid and ready than other countrymen, and has given occasion to the observation, that English wit comes afterwards—which the French denote as *esprit d'escalier*. This dulness makes their attachment to home, and their adherence in all foreign countries to home habits. The Englishman who visits Mount Etna, will carry his tea-kettle to the top. The old Italian author of the "Relation of England" (in 1500), says, "I have it on the best information, that, when the war is actually raging most furiously, they will seek for good eating, and all their other comforts, without thinking what harm might befall them." Then their eyes seem to be set at the bottom of a tunnel, and they affirm the one small fact they know, with the best faith in the world that nothing else exists. And, as their own belief in guineas is perfect, they readily, on all occasions, apply the pecuniary argument as final. Thus when the Rochester rappings began to be heard of in England, a man deposited £100 in a sealed box in the Dublin Bank, and then advertised in the newspapers to all somnambulists, mesmerizers, and others, that whoever could tell him the number of his note, should have the money. He let it lie there six months, the

* It is an unlucky moment to remember these sparkles of solitary virtue in the face of the honours lately paid in England to the Emperor Louis Napoleon. I am sure that no Englishman whom I had the happiness to know, consented, when the aristocracy and the commons of London cringed like a Neapolitan rabble before a successful thief. But—how to resist one step, though odious, in a linked series of state necessities?—Governments must always learn too late, that the use of dishonest agents is as ruinous for nations as for single men.

newspapers now and then, at his instance, stimulating the attention of the adepts; but none could ever tell him; and he said, "Now let me never be bothered more with this proven lie." It is told of a good Sir John, that he heard a case stated by counsel, and made up his mind; then the counsel for the other side taking their turn to speak, he found himself so unsettled and perplexed, that he exclaimed, "So help me God! I will never listen to evidence again." Any number of delightful examples of this English stolidity are the anecdotes of Europe. I knew a very worthy man—a magistrate, I believe he was, in the town of Derby—who went to the opera, to see Malibran. In one scene, the heroine was to rush across a ruined bridge. Mr. B. arose, and mildly, yet firmly, called the attention of the audience and the performers to the fact, that, in his judgment, the bridge was unsafe! This English stolidity contrasts with French wit and tact. The French, it is commonly said, have greatly more influence in Europe than the English. What influence the English have is by brute force of wealth and power; that of the French by affinity and talent. The Italian is subtle, the Spaniard treacherous: tortures, it was said, could never wrest from an Egyptian the confession of a secret. None of these traits belong to the Englishman. His choler and conceit force everything out. Defoe, who knew his countrymen well, says of them,

"In close intrigue, their faculty's but weak,
For generally whate'er they know, they speak,
And often their own counsels undermine
By mere infirmity without design;
From whence, the learned say, it doth proceed,
That English treasons never can succeed;
For they're so open-hearted, you may know
Their own most secret thoughts, and others' too."

VIII.—CHARACTER.

THE English race are reputed morose. I do not know that they have sadder brows than their neighbours of northern climates. They are sad by comparison with the singing and dancing nations: not sadder, but slow and staid, as finding their joys at home. They, too, believe that where there is no enjoyment of life, there can be no vigour and heart in speech or thought: that your merry heart goes all the way, your sad one times in a mile. This trait of gloom has been fixed on them by French travellers; who, from Froissart, Voltaire, Le Sage,

Mirabeau, down to the lively journalists of the *feuilletons*, have spent their wit on the solemnity of their neighbours. The French say, gay conversation is unknown in their island. The Englishman finds no relief from reflection, except in reflection. When he wishes for amusement, he goes to work. His hilarity is like an attack of fever. Religion, the theatre, and the reading the books of his country, all feed and increase his natural melancholy. The police does not interfere with public diversions. It thinks itself bound in duty to respect the pleasures and rare gaiety of this inconsolable nation; and their well-known courage is entirely attributable to their disgust of life.

I suppose their gravity of demeanour and their few words have obtained this reputation. As compared with the Americans, I think them cheerful and contented. Young people, in this country, are much more prone to melancholy. The English have a mild aspect, and a ringing cheerful voice. They are large-natured, and not so easily amused as the southerners, and are among them as grown people among children, requiring war, or trade, or engineering, or science, instead of frivolous games. They are proud and private, and, even if disposed to recreation, will avoid an open garden. They sported sadly; *ils s'amusaient tristement, selon la coutume de leur pays*, said Froissart; and, I suppose, never nation built their party-walls so thick, or their garden-fences so high. Meat and wine produce no effect on them: they are just as cold, quiet, and composed, at the end, as at the beginning of dinner.

The reputation of taciturnity they have enjoyed for six or seven hundred years; and a kind of pride in bad public speaking is noted in the House of Commons, as if they were willing to show that they did not live by their tongues, or thought they spoke well enough if they had the tone of gentlemen. In mixed company they shut their mouths. A Yorkshire mill-owner told me he had ridden more than once all the way from London to Leeds, in the first-class carriage, with the same persons, and no word exchanged. The club-houses were established to cultivate social habits, and it is rare that more than two eat together, and oftenest one eats alone. Was it then a stroke of humour in the serious Swedenborg, or was it only his pitiless logic, that made him shut up the English souls in a heaven by themselves?

They are contradictorily described as sour, splenetic, and stubborn—and as mild, sweet, and sensible. The truth is, they have great range and variety of character. Commerce sends abroad multitudes of different classes. The choleric Welshman, the fervid Scot, the bilious resident in the East or West Indies,

are wide of the perfect behaviour of the educated and dignified man of family. So is the burly farmer; so is the country squire, with his narrow and violent life. In every inn is the Commercial Room, in which 'travellers,' or bagmen who carry patterns, and solicit orders, for the manufacturers, are wont to be entertained. It easily happens that this class should characterize England to the foreigner, who meets them on the road, and at every public-house, whilst the gentry avoid the taverns, or seclude themselves whilst in them.

But these classes are the right English stock, and may fairly show the national qualities, before yet art and education have dealt with them. They are good lovers, good haters, slow but obstinate admirers, and, in all things, very much steeped in their temperament, like men hardly awaked from deep sleep, which they enjoy. Their habits and instincts cleave to nature. They are of the earth, earthy; and of the sea, as the sea-kinds, attached to it for what it yields them, and not from any sentiment. They are full of coarse strength, rude exercise, butcher's meat, and sound sleep; and suspect any poetic insinuation or any hint for the conduct of life which reflects on this animal existence, as if somebody were fumbling at the umbilical cord and might stop their supplies. They doubt a man's sound judgment if he does not eat with appetite, and shake their heads if he is particularly chaste. Take them as they come, you shall find in the common people a surly indifference, sometimes gruffness and ill temper; and, in minds of more power, magazines of inexhaustible war, challenging

"The ruggedest hour that time and spite dare bring
To frown upon the enraged Northumberland."

They are headstrong believers and defenders of their opinion, and not less resolute in maintaining their whim and perversity. Hezekiah Woodward wrote a book against the Lord's Prayer. And one can believe that Burton the Anatomist of Melancholy, having predicted from the stars the hour of his death, slipped the knot himself round his own neck, not to falsify his horoscope.

Their looks bespeak an invincible stoutness: they have extreme difficulty to run away, and will die game. Wellington said of the young coxcombs of the Life Guards delicately brought up, "but the puppies fight well;" and Nelson said of his sailors, "they really mind shot no more than peas." Of absolute stoutness no nation has more or better examples. They are good at storming redoubts, at boarding frigates, at dying in the last ditch, or any desperate service which has daylight and honour in it; but not, I think, at enduring the rack, or any passive obedience, like jumping off a castle-roof

at the word of a czar. Being both vascular and highly organized, so as to be very sensible of pain; and intellectual, so as to see reason and glory in a matter.

Of that constitutional force which yields the supplies of the day they have the more than enough, the excess which creates courage on fortitude, genius in poetry, invention in mechanics, enterprise in trade, magnificence in wealth, splendour in ceremonies, petulance and projects in youth. The young men have a rude health which runs into peccant humours. They drink brandy like water, cannot expend their quantities of waste strength on riding, hunting, swimming, and fencing, and run into absurd frolics with the gravity of the Eumenides. They stoutly carry into every nook and corner of the earth their turbulent sense: leaving no lie uncontradicted; no pretension unexamined. They chew hasheesh; cut themselves with poisoned creases: swing their hammock in the boughs of the Bohon Upas; taste every poison; buy every secret; at Naples they put St. Januarius's blood in an alembic; they saw a hole into the head of the "winking Virgin," to know why she winks; measure with an English footrule every cell of the Inquisition, every Turkish caaba, every Holy of holies; translate and send to Bentley the arcanum bribed and bullied away from shuddering Brahmins; and measure their own strength by the terror they cause. These travellers are of every class, the best and the worst; and it may easily happen that those of rudest behaviour are taken notice of and remembered. The Saxon melancholy in the vulgar rich and poor appears as gushes of ill-humour, which every check exasperates into sarcasm and vituperation. There are multitudes of rude young English who have the self-sufficiency and bluntness of their nation, and who, with their disdain of the rest of mankind, and with this indigestion and choler, have made the English traveller a proverb for uncomfortable and offensive manners. It was no bad description of the Briton generically, what was said two hundred years ago, of one particular Oxford scholar: "He was a very bold man, uttered anything that came into his mind, not only among his companions, but in public coffee-houses, and would often speak his mind of particular persons then accidentally present, without examining the company he was in; for which he was often reprimanded, and several times threatened to be kicked and beaten."

The common Englishman is prone to forget a cardinal article in the bill of social rights, that every man has a right to his own ears. No man can claim to usurp more than a few cubic feet of the audibilities of a public room, or to put upon the company with the loud statement of his crotchets or personalities.

But it is in the deep traits of race that the fortunes of nations are written, and however derived, whether a happier tribe or mixture of tribes, the air, or what circumstance, that mixed for them the golden mean of temperament—here exists the best stock in the world, broad-fronted, broad-bottomed, best for depth, range, and equability, men of aplomb and reserves, great range and many moods, strong instincts, yet apt for culture; war-class as well as clerks; Earls and tradesmen; wise minority, as well as foolish majority; abysmal temperament, hiding wells of wrath, and glooms on which no sunshine settles; alternated with a common sense and humanity which hold them fast to every piece of cheerful duty; making this temperament a sea to which all storms are superficial; a race to which their fortunes flow, as if they alone had the elastic organization at once fine and robust enough for dominion; as if the burly inexpressive, now mute and contumacious, now fierce and sharp-tongued dragon, which once made the island light with his fiery breath, had bequeathed his ferocity to his conqueror. They hide virtues under vices, or the semblance of them. It is the misshapen hairy Scandinavian troll again, who lifts the cart out of the mire, or "threshes the corn that ten day-labourers could not end," but it is done in the dark, and with muttered maledictions. He is a churl with a soft place in his heart, whose speech is a brash of bitter waters, but who loves to help you at a pinch. He says no, and serves you, and your thanks disgust him. Here was lately a cross-grained miser, odd and ugly, resembling in countenance the portrait of Punch, with the laugh left out; rich by his own industry; sulking in a lonely house; who never gave a dinner to any man, and disdained all courtesies; yet as true a worshipper of beauty in form and colour as ever existed, and profusely pouring over the cold mind of his countrymen creations of grace and truth, removing the reproach of sterility from English art, catching from their savage climate every fine hint, and importing into their galleries every tint and trait of sunnier cities and skies; making an era in painting; and, when he saw that the splendour of one of his pictures in the Exhibition dimmed his rival's that hung next it, secretly took a brush and blackened his own.

They do not wear their heart in their sleeve for daws to peck at. They have that phlegm or staidness, which it is a compliment to disturb. "Great men," said Aristotle, "are always of a nature originally melancholy." 'Tis the habit of a mind which attaches to abstractions with a passion which gives vast results. They dare to displease, they do not speak to expectation. They like the sayers of No, better than the sayers of Yes. Each of them has an opinion which he feels it becomes

him to express all the more that it differs from yours. They are meditating opposition. This gravity is inseparable from minds of great resources.

There is an English hero superior to the French, the German, the Italian, or the Greek. When he is brought to the strife with fate, he sacrifices a richer material possession, and on more purely metaphysical grounds. He is there with his own consent, face to face with fortune, which he defies. On deliberate choice, and from grounds of character, he has elected his part to live and die for, and dies with grandeur. This race has added new elements to humanity, and has a deeper root in the world.

They have great range of scale, from ferocity to exquisite refinement. With larger scale, they have great retrieving power. After running each tendency to an extreme, they try another tack with equal heat. More intellectual than other races, when they live with other races, they do not take their language, but bestow their own. They subsidize other nations, and are not subsidized. They proselyte, and are not proselyted. They assimilate other races to themselves, and are not assimilated. The English did not calculate the conquest of the Indies. It fell to their character. So they administer in different parts of the world the codes of every empire and race; in Canada, old French law; in the Mauritius, the Code Napoleon; in the West Indies, the edicts of the Spanish Cortes; in the East Indies, the Laws of Menu; in the Isle of Man, of the Scandinavian Thing; at the Cape of Good Hope, of the old Netherlands; and in the Ionian Islands, the Pandects of Justinian.

They are very conscious of their advantageous position in history. England is the lawgiver, the patron, the instructor, the ally. Compare the tone of the French and of the English press: the first querulous, captious, sensitive about English opinion; the English press is never timorous about French opinion, but arrogant and contemptuous.

They are testy and headstrong through an excess of will and bias; churlish as men sometimes please to be who do not forget a debt, who ask no favours, and who will do what they like with their own. With education and intercourse, these asperities wear off, and leave the good will pure. If anatomy is reformed according to national tendencies, I suppose, the spleen will hereafter be found in the Englishman, not found in the American, and differencing the one from the other. I anticipate another anatomical discovery, that this organ will be found to be cortical and caducous, that they are superficially morose, but at last tender-hearted, herein differing from Rome and the Latin nations. Nothing savage, nothing mean resides in the English heart. They are subject to panics of credulity

and of rage, but the temper of the nation, however disturbed, settles itself soon and easily, as in this temperate zone, the sky after whatever storms clears again, and serenity is its normal condition.

A saving stupidity masks and protects their perception as the curtain of the eagle's eye. Our swifter Americans, when they first deal with English, pronounce them stupid; but, later, do them justice as people who wear well, or hide their strength. To understand the power of performance that is in their finest wits, in the patient Newton, or in the versatile transcendent poets, or in the Dugdales, Gibbons, Hallams, Eldons, and Peels, one should see how English day-labourers hold out. High and low, they are of an unctuous texture. There is an adipocere in their constitution, as if they had oil also for their mental wheels, and could perform vast amounts of work without damaging themselves.

Even the scale of expense on which people live, and to which scholars and professional men conform, proves the tension of their muscle, when vast numbers are found who can each lift this enormous load. I might even add, their daily feasts argue a savage vigour of body.

No nation was ever so rich in able men; "gentlemen," as Charles I. said of Strafford, "whose abilities might make a prince rather afraid than ashamed in the greatest affairs of state;" men of such temper, that, like Baron Vere, "had one seen him returning from a victory, he would by his silence have suspected that he had lost the day; and, had he beheld him in retreat, he would have collected him a conqueror by the cheerfulness of his spirit."*

The following passage from the *Heimskringla* might almost stand as a portrait of the modern Englishman:—"Haldor was very stout and strong, and remarkably handsome in appearances. King Harold gave him this testimony, that he, among all his men, cared least about doubtful circumstances, whether they betokened danger or pleasure; for, whatever turned up, he was never in higher nor in lower spirits, never slept less nor more on account of them, nor ate nor drank but according to his custom. Haldor was not a man of many words, but short in conversation, told his opinion bluntly, and was obstinate and hard: and this could not please the King, who had many clever people about him, zealous in his service. Haldor remained a short time with the King, and then came to Iceland, where he took up his abode, in Hiardaholt, and dwelt in that farm to a very advanced age."*

The national temper, in the civil history, is not flashy or

* Fuller. *Worthies of England*.

† *Heimskringla*, Laing's translation, vol. iii. p. 37.

whiffing. The slow, deep English mass smoulders with fire, which at last sets all its borders in flame. The wrath of London is not French wrath, but has a long memory, and, in its hottest heat, a register and rule.

Half their strength they put not forth. They are capable of a sublime resolution, and if hereafter the war of races, often predicted, and making itself a war of opinions also (a question of despotism and liberty coming from Eastern Europe), should menace the English civilization, these sea-kings may take once again to their floating castles, and find a new home and a second millennium of power in their colonies.

The stability of England is the security of the modern world. If the English race were as mutable as the French, what reliance? But the English stand for liberty. The conservative, money-loving, lord-loving English are yet liberty-loving; and so freedom is safe: for they have more personal force than any other people. The nation always resist the immoral action of their government. They think humanely on the affairs of France, of Turkey, of Poland, of Hungary, of Schleswig Holstein, though overborne by the statecraft of the rulers at last.

Does the early history of each tribe show the permanent bias, which, though not less potent, is masked, as the tribe spreads its activity into colonies, commerce, codes, arts, letters? The early history shows it, as the musician plays the air which he proceeds to conceal in a tempest of variations. In Alfred, in the Northmen, one may read the genius of the English society, namely, that private life is the place of honour. Glory, a career, and ambition, words familiar to the longitude of Paris, are seldom heard in English speech. Nelson wrote from their hearts his homely telegraph, "England expects every man to do his duty."

For actual service, for the dignity of a profession, or to appease diseased or inflamed talent, the army and navy may be entered (the worst boys doing well in the navy); and the civil service, in departments where serious official work is done; and they hold in esteem the barrister engaged in the severer studies of the law. But the calm, sound, and most British Briton shrinks from public life, as charlatanism, and respects an economy founded on agriculture, coal-mines, manufactures, or trade, which secures an independence through the creation of real values.

They wish neither to command or obey, but to be kings in their own houses. They are intellectual, and deeply enjoy literature; they like well to have the world served up to them in books, maps, models, and every mode of exact information, and, though not creators in art, they value its refinement.

They are ready for leisure, can direct and fill their own day, nor need so much as others the constraint of a necessity. But the history of the nation discloses, at every turn, this original predilection for private independence, and, however this inclination may have been disturbed by the bribes with which their vast colonial power has warped men out of orbit, the inclination endures, and forms and re-forms the laws, letters, manners, and occupations. They choose that welfare which is compatible with the commonwealth, knowing that such alone is stable; as wise merchants prefer investments in the three per cents.

IX.—COCKAYNE.

THE English are a nation of humourists. Individual right is pushed to the uttermost bound compatible with public order. Property is so perfect, that it seems the craft of that race, and not to exist elsewhere. The King cannot step on an acre which the peasant refuses to sell. A testator endows a dog or a rookery, and Europe cannot interfere with his absurdity. Every individual has his particular way of living, which he pushes to folly, and the decided sympathy of his compatriots is engaged to back up Mr. Crump's whim by statutes, and chancellors, and horse-guards. There is no freak so ridiculous but some Englishman has attempted to immortalize by money and law. British citizenship is as omnipotent as Roman was. Mr. Cockayne is very sensible of this. The pury man means by freedom the right to do as he pleases, and does wrong in order to feel his freedom, and makes a conscience of persisting in it.

He is intensely patriotic, for his country is so small. His confidence in the power and performance of his nation makes him provokingly incurious about other nations. He dislikes foreigners. Swedenborg, who lived much in England, notes "the similitude of minds among the English, in consequence of which they contract familiarity with friends who are of that nation, and seldom with others: and they regard foreigners, as one looking through a telescope from the top of a palace regards those who dwell or wander about out of the city." A much older traveller, the Venetian who wrote the "Relation of England,"* in 1500, says:—"The English are great lovers of themselves, and of everything belonging to them. They think that there are no other men than themselves, and no other world but England; and, whenever they see a handsome

* Printed by the Camden Society.

foreigner, they say he looks like an Englishman, and it is a great pity he should not be an Englishman: and whenever they partake of any delicacy with a foreigner, they ask him whether such a thing is made in his country." When he adds epithets of praise, his climax is "so English;" and when he wishes to pay you the highest compliment, he says, I should not know you from an Englishman. France is, by its natural contrast, a kind of blackboard on which English character draws its own traits in chalk. This arrogance habitually exhibits itself in allusions to the French. I suppose that all men of English blood in America, Europe, or Asia, have a secret feeling of joy that they are not French natives. Mr. Coleridge is said to have given public thanks to God, at the close of a lecture, that he had defended him from being able to utter a single sentence in the French language. I have found that Englishmen have such a good opinion of England, that the ordinary phrases, in all good society, of postponing or disparaging one's own things in talking with a stranger, are seriously mistaken by them for an inappreciable homage to the merits of their nation; and the New Yorker or Pennsylvanian who modestly laments the disadvantage of a new country, log-huts, and savages, is surprised by the instant and unfeigned commiseration of the whole company, who plainly account all the world out of England a heap of rubbish.

The same insular limitation pinches his foreign politics. He sticks to his traditions and usages, and so help him God! he will force his island by-laws down the throat of great countries, like India, China, Canada, Australia, and not only so, but impose Wapping on the Congress of Vienna, and trample down all nationalities with his taxed boots. Lord Chatham goes for liberty, and no taxation without representation—for that is British law; but not a hobnail shall they dare make in America, but buy their nails in England—for that also is British law; and the fact that British commerce was to be re-created by the independence of America, took them all by surprise.

In short, I am afraid that English nature is so rank and aggressive as to be a little incompatible with every other. The world is not wide enough for two.

But, beyond this nationality, it must be admitted the island offers a daily worship to the old Norse god Brage, celebrated among our Scandinavian forefathers for his eloquence and majestic air. The English have a steady courage, that fits them for great attempts and endurance; they have also a petty courage, through which every man delights in showing himself for what he is, and in doing what he can; so that, in all companies, each of them has too good an opinion of

nimself to imitate anybody. He hides no defect of his form, features, dress, connection, or birthplace, for he thinks every circumstance belonging to him comes recommended to you. If one of them have a bald, or a red, or a green head, or bow legs, or a scar, or mark, or a paunch, or a squeaking or a raven voice, he has persuaded himself that there is something modish and becoming in it, and that it sits well on him.

But nature makes nothing in vain, and this little superfluity of self-regard in the English brain, is one of the secrets of their power and history. For it sets every man on being and doing what he really is and can. It takes away a dodging, skulking, secondary air, and encourages a frank and manly bearing, so that each man makes the most of himself, and loses no opportunity for want of pushing. A man's personal defects will commonly have with the rest of the world precisely that importance which they have to himself. If he makes light of them, so will other men. We all find in these a convenient meter of character, since a little man would be ruined by the vexation. I remember a shrewd politician, in one of our western cities, told me, "that he had known several successful statesmen made by their foible." And another, an ex-governor of Illinois, said to me, "If a man knew anything, he would sit in a corner and be modest; but he is such an ignorant peacock, that he goes bustling up and down, and hits on extraordinary discoveries."

There is also this benefit in brag, that the speaker is unconsciously expressing his own ideal. Humour him by all means, draw it all out, and hold him to it. Their culture generally enables the travelled English to avoid any ridiculous extremes of this self-pleasing, and to give it an agreeable air. Then the natural disposition is fostered by the respect which they find entertained in the world for English ability. It was said of Louis XIV., that his gait and air were becoming enough in so great a monarch, yet would have been ridiculous in another man; so the prestige of the English name warrants a certain confident bearing, which a Frenchman or Belgian could not carry. At all events, they feel themselves at liberty to assume the most extraordinary tone on the subject of English merits.

An English lady on the Rhine hearing a German speaking of her party as foreigners, exclaimed, "No, we are not foreigners; we are English; it is you that are foreigners." They tell you daily, in London, the story of the Frenchman and Englishman who quarrelled. Both were unwilling to fight, but their companions put them up to it: at last, it was agreed, that they should fight alone, in the dark, and with pistols: the candles were put out, and the Englishman, to make sure not to hit anybody, fired up the chimney, and

brought down the Frenchman, They have no curiosity about foreigners, and answer any information you may volunteer with "Oh, Oh!" until the informant makes up his mind that they shall die in their ignorance, for any help he will offer. There are really no limits to this conceit, though brighter men among them make painful efforts to be candid.

The habit of brag runs through all classes, from the Times newspaper through politicians and poets, through Wordsworth, Carlyle, Mill, and Sydney Smith, down to the boys of Eton. In the gravest treatise on political economy, in a philosophical essay, in books of science, one is surprised by the most innocent exhibition of unflinching nationality. In a tract on Corn, a most amiable and accomplished gentleman writes thus:—"Though Britain, according to Bishop Berkeley's idea, were surrounded by a wall of brass ten thousand cubits in height, still she would as far excel the rest of the globe in riches, as she now does, both in this secondary quality, and in the more important ones of freedom, virtue, and science."*

The English dislike the American structure of society, whilst yet trade, mills, public education, and chartism are doing what they can to create in England the same social condition. America is the paradise of the economists; is the favourable exception invariably quoted to the rules of ruin; but when he speaks directly of the Americans, the islander forgets his philosophy, and remembers his disparaging anecdotes.

But this childish patriotism costs something, like all narrowness. The English sway of their colonies has no root of kindness. They govern by their arts and ability; they are more just than kind; and, whenever an abatement of their power is felt, they have not conciliated the affection on which to rely.

Coarse local distinctions, as those of nation, province, or town, are useful in the absence of real ones; but we must not insist on these accidental lines. Individual traits are always triumphing over national ones. There is no fence in metaphysics discriminating Greek, or English, or Spanish science. Æsop and Montaigne, Cervantes and Saadi, are men of the world; and to wave our own flag at the dinner table or in the University, is to carry the boisterous dulness of a fire-club into a polite circle. Nature and destiny are always on the watch for our follies. Nature trips us up when we strut; and there are curious examples in history on this very point of national pride.

George of Cappadocia, born at Epiphania, in Cilicia, was a low parasite, who got a lucrative contract to supply the army.

* William Spence.

with bacon. A rogue and informer, he got rich, and was forced to run from justice. He saved his money, embraced Arianism, collected a library, and got promoted by a faction to the episcopal throne of Alexandria. When Julian came, A.D. 361, George was dragged to prison; the prison was burst open by the mob, and George was lynched, as he deserved. And this precious knave became, in good time, Saint George of England, patron of chivalry, emblem of victory and civility, and the pride of the best blood of the modern world.

Strange, that the solid truth-speaking Briton should derive from an impostor. Strange, that the New World should have no better luck—that broad America must wear the name of a thief. Amerigo Vespucci, the pickle-dealer at Seville, who went out, in 1499, a subaltern with Hojeda, and whose highest naval rank was boatswain's mate in an expedition that never sailed, managed in this lying world to supplant Columbus, and baptize half the earth with his own dishonest name. Thus nobody can throw stones. We are equally badly off in our founders; and the false pickle-dealer is an offset to the false bacon-seller.

X.—WEALTH.

THERE is no country in which so absolute a homage is paid to wealth. In America, there is a touch of shame when a man exhibits the evidences of large property, is if, after all, it needed apology. But the Englishman has pure pride in his wealth, and esteems it a final certificate. A coarse logic rules throughout all English souls;—if you have merit, can you not show it by your good clothes, and coach, and horses? How can a man be a gentleman without a pipe of wine? Haydon says, "there is a fierce resolution to make every man live according to the means he possesses." There is a mixture of religion in it. They are under the Jewish law, and read with sonorous emphasis that their days shall be long in the land, they shall have sons and daughters, flocks and herds, wine and oil. In exact proportion is the reproach of poverty. They do not wish to be represented except by opulent men. An Englishman who has lost his fortune, is said to have died of a broken heart. The last term of insult is "a beggar." Nelson said, "the want of fortune is a crime which I can never get over." Sydney Smith said, "poverty is infamous in England." And one of their recent writers speaks, in reference to a private and scholastic life, of, "the grave moral deterioration which follows an empty exchequer." You shall find this

sentiment, if not so frankly put, yet deeply implied, in the novels and romances of the present century, and not only in these, but in biography, and in the votes of public assemblies, in the tone of the preaching, and in the table-talk.

I was lately turning over Wood's *Athens Oxonienses*, and looking naturally for another standard in a chronicle of the scholars of Oxford for two hundred years. But I found the two disgraces in that, as in most English books, are, first, disloyalty to Church and State, and, second, to be born poor, or to come to poverty. A natural fruit of England is the brutal political economy. Malthus finds no cover bid at nature's table for the labourer's son. In 1809, the majority in Parliament expressed itself by the language of Mr. Fuller in the House of Commons, "if you do not like the country, damn you, you can leave it." When Sir S. Romilly proposed his bill forbidding parish officers to bind children apprentices at a greater distance than forty miles from their home, Peel opposed, and Mr. Wortley said, "though, in the higher ranks, to cultivate family affections was a good thing, 'twas not so among the lower orders. Better take them away from those who might deprave them. And it was highly injurious to trade to stop binding to manufacturers, as it must raise the price of labour, and of manufactured goods."

The respect for truth of facts in England is equalled only by the respect for wealth. It is at once the pride of art of the Saxon, as he is a wealth-maker, and his passion for independence. The Englishman believes that every man must take care of himself, and has himself to thank, if he do not mend his condition. To pay their debts is their national point of honour. From the Exchequer and the East India House to the huckster's shop, everything prospers, because it is solvent. The British armies are solvent, and pay for what they take. The British empire is solvent; for, in spite of the huge national debt, the valuation mounts. During the war from 1789 to 1815 whilst they complained that they were taxed within an inch of their lives, and, by dint of enormous taxes, were subsidizing all the continent against France, the English were growing rich every year faster than any people ever grew before. It is their maxim, that the weight of taxes must be calculated not by what is taken, but by what is left. Solvency is in the ideas and mechanism of an Englishman. The Crystal Palace is not considered honest until it pays;—no matter how much convenience, beauty, or éclat, it must be self-supporting. They are contented with slower steamers, as long as they know that swifter boats lose money. They proceed logically by the double method of labour and thrift. Every household exhibits an exact economy, and nothing of that

uncalculated headlong expenditure which families use in America. If they cannot pay, they do not buy; for they have no presumption of better fortunes next year, as our people have; and they say without shame, I cannot afford it. Gentlemen do not hesitate to ride in the second-class cars, or in the second cabin. An economist, or a man who can proportion his means and his ambition, or bring the year round with expenditure which expresses his character, without embarrassing one day of his future, is already a master of life, and a freeman. Lord Burleigh writes to his son, "that one ought never to devote more than two-thirds of his income to the ordinary expenses of life, since the extraordinary will be certain to absorb the other third."

The ambition to create value evokes every kind of ability, government becomes a manufacturing corporation, and every house a mill. The headlong bias to utility will let no talent lie in a napkin—if possible, will teach spiders to weave silk stockings. An Englishman, while he eats and drinks no more or not much more than another man, labours three times as many hours in the course of a year, as any other European; or, his life as a workman is three lives. He works fast. Everything in England is at a quick pace. They have reinforced their own productivity by the creation of that marvellous machinery which differences this age from any other age.

'Tis a curious chapter in modern history, the growth of the machine-shop. Six hundred years ago, Roger Bacon explained the precession of the equinoxes, the consequent necessity of the reform of the calendar; measured the length of the year, invented gunpowder; and announced (as if looking from his lofty cell, over five centuries, into ours) "that machines can be constructed to drive ships more rapidly than a whole galley of rowers could do; nor would they need anything but a pilot to steer them. Carriages also might be constructed to move with an incredible speed, without the aid of any animal. Finally, it would not be impossible to make machines, which, by means of a suit of wings, should fly in the air in the manner of birds." But the secret slept with Bacon. The six hundred years have not yet fulfilled his words. Two centuries ago, the sawing of timber was done by hand; the carriage wheels ran on wooden axles; the land was tilled by wooden ploughs. And it was to little purpose that they had pit-coal, or that looms were improved, unless Watt and Stephenson had taught them to work force-pumps and power-looms, by steam. The great strides were all taken within the last hundred years.

The Life of Sir Robert Peel, who died the other day, the model Englishman, very properly has, for a frontispiece, a drawing of the spinning-jenny, which wove the web of his

fortunes. Hargreaves invented the spinning-jenny, and died in a workhouse. Arkwright improved the invention; and the machine dispensed with the work of ninety-nine men: that is, one spinner could do as much work as one hundred had done before. The loom was improved further. But the men would sometimes strike for wages, and combine against the masters, and, about 1829-30, much fear was felt lest the trade would be drawn away by these interruptions, and the emigration of the spinners, to Belgium and the United States. Iron and steel are very obedient. Whether it were not possible to make a spinner that would not rebel, nor mutter, nor scowl, nor strike for wages, nor emigrate? At the solicitation of the masters, after a mob and riot at Stalybridge, Mr. Roberts, of Manchester, undertook to create this peaceful fellow, instead of the quarrelsome fellow God had made. After a few trials, he succeeded, and, in 1830, procured a patent for his self-acting mule; a creation, the delight of mill-owners, and "destined," they said, "to restore order among the industrious classes;" a machine requiring only a child's hand to piece the broken yarns. As Arkwright had destroyed domestic spinning, so Roberts destroyed the factory spinner. The power of machinery in Great Britain, in mills, has been computed to be equal to 600,000,000 men, one man being able by the aid of steam to do the work which required two hundred and fifty men to accomplish fifty years ago. The production has been commensurate. England already had this laborious race, rich soil, water, wood, coal, iron, and favourable climate. Eight hundred years ago, commerce had made it rich, and it was recorded, "England is the richest of all the northern nations." The Norman historians recite, that "in 1067, William carried with him into Normandy, from England, more gold and silver than had ever before been seen in Gaul." But when, to this labour and trade, and these native resources, was added this goblin of steam, with his myriad arms, never tired, working night and day everlastingly, the amassing of property has run out of all figures. It makes the motor of the last ninety years. The steam-pipe has added to her population and wealth the equivalent of four or five Englands. Forty thousand ships are entered in Lloyd's lists. The yield of wheat has gone on from 2,000,000 quarters in the time of the Stuarts, to 13,000,000 in 1854. A thousand million of pounds sterling are said to compose the floating money of commerce. In 1848, Lord John Russell stated that the people of this country had laid out £300,000,000 of capital in railways, in the last four years. But a better measure than these sounding figures, is the estimate, that there is wealth enough in England to support the entire population in idleness for one year.

The wise, versatile, all-giving machinery makes chisels, roads, locomotives, telegraphs. Whitworth divides a bar to a millionth of an inch. Steam twines huge cannon into wreaths, as easily as it braids straw, and vies with the volcanic forces which twisted the strata. It can clothe shingle mountains with ship-oaks, make sword-blades that will cut gun-barrels in two. In Egypt, it can plant forests, and bring ruin after three thousand years. Already it is ruddering the balloon, and the next war will be fought in the air. But another machine more potent in England than steam, is the Bank. It votes an issue of bills, population is stimulated, and cities rise; it refuses loans, and emigration empties the country; trade sinks; revolutions break out; Kings are dethroned. By these new agents our social system is moulded. By dint of steam and of money, war and commerce are changed. Nations have lost their old omnipotence; the patriotic tie does not hold. Nations are getting obsolete, we go and live where we will. Steam has enabled men to choose what law they will live under. Money makes place for them. The telegraph is a limp-band that will hold the Fenris-wolf of war. For now that a telegraph line runs through France and Europe, from London, every message it transmits makes stronger by one thread the band which war will have to cut.

The introduction of these elements gives new resources to existing proprietors. A sporting Duke may fancy that the state depends on the House of Lords, but the engineer sees that every stroke of the steam-piston gives value to the Duke's land, fills it with tenants; doubles, quadruples, centuples the Duke's capital, and creates new measures and new necessities for the culture of his children. Of course, it draws the nobility into the competition as stockholders in the mine, the canal, the railway, in the application of steam to agriculture, and sometimes into trade. But it also introduces large classes into the same competition; the old energy of the Norse race arms itself with these magnificent powers; new men prove an overmatch for the land-owner, and the mill buys out the castle. Scandinavian Thor, who once forged his bolts in icy Hecla, and built galleys by lonely fiords, in England, has advanced with the times, has shorn his beard, enters Parliament, sits down at a desk in the India House, and lends Miollnir to Birmingham for a steam-hammer.

The creation of wealth in England in the last ninety years is a main fact in modern history. The wealth of London determines prices all over the globe. All things precious, or useful, or amusing, or intoxicating, are sucked into this commerce and floated to London. Some English private fortunes reach, and some exceed a million of dollars a year. A

hundred thousand palaces adorn the island. All that can feed the senses and passions, all that can succour the talent, or arm the hands of the intelligent middle class, who never spare in what they buy for their own consumption, all that can aid science, gratify taste, or soothe comfort, is in open market. Whatever is excellent and beautiful in civil, rural, or ecclesiastic architecture; in fountain, garden, or grounds; the English noble crosses sea and land to see and to copy at home. The taste and science of thirty peaceful generations; the gardens which Evelyn planted; the temples and pleasure-houses which Inigo Jones and Christopher Wren built; the wood that Gibbons carved; the taste of foreign and domestic artists, Shenstone, Pope, Brown, Landon, Paxton, are in the vast auction, and the hereditary principle heaps on the owner of to-day the benefit of ages of owners. The present possessors are to the full as absolute as any of their fathers, in choosing and procuring what they like. This comfort and splendour, the breadth of lake and mountain, tillage, pasture, and park, sumptuous castle and modern villa—all consist with perfect order. They have no revolutions; no horse-guards dictating to the crown; no Parisian *poissardes* and barricades; no mob; but drowsy habitude, daily dress-dinners, wine, and ale, and beer, and gin, and sleep.

With this power of creation, and this passion for independence, property has reached an ideal perfection. It is felt and treated as the national life-blood. The laws are framed to give property the securest possible basis, and the provisions to lock and transmit it have exercised the cunningest heads in a profession which never admits a fool. The rights of property nothing but felony and treason can override. The house is a castle which the King cannot enter. The Bank is a strong box to which the King has no key. Whatever surly sweetness possession can give, is tasted in England to the dregs. Vested rights are awful things, and absolute possession gives the smallest freeholder identity of interest with the Duke. High stone fences and padlocked garden gates announce the absolute will of the owner to be alone. Every whim of exaggerated egotism is put into stone and iron, into silver and gold, with costly deliberation and detail.

An Englishman hears that the Queen Dowager wishes to establish some claim to put her park paling a rod forward into his grounds, so as to get a coachway, and save her a mile to the avenue. Instantly he transforms his paling into stonemasonry, solid as the walls of Cumæ, and all Europe cannot prevail on him to sell or compound for an inch of the land. They delight in a freak as the proof of their sovereign freedom. See Edward Boynton, at Syce Park, at Cadenham, on a precipice

of incomparable prospect, built a house like a long barn, which had not a window on the prospect side. Strawberry Hill of Horace Walpole, Fonthill Abbey of Mr. Beckford, were freaks; and Newstead Abbey became one in the hands of Lord Byron.

But the proudest result of this creation has been the great and refined forces it has put at the disposal of the private citizen. In the social world, an Englishman to-day has the best lot. He is a King in a plain coat. He goes with the most powerful protection, keeps the best company, is armed by the best education, is seconded by wealth; and his English name and accidents are like a flourish of trumpets announcing him. This, with his quiet style of manners, gives him the power of a Sovereign, without the inconveniences which belong to that rank. I much prefer the condition of an English gentleman of the better class, to that of any potentate in Europe—whether for travel, or for opportunity of society, or for access to means of science or study, or for mere comfort and easy healthy relation to people at home.

Such as we have seen is the wealth of England, a mighty mass, and made good in whatever details we care to explore. The cause and spring of it is the wealth of temperament in the people. The wonder of Britain is this plenteous nature. Her worthies are ever surrounded by as good men as themselves; each is a captain a hundred strong, and that wealth of men is represented again in the faculty of each individual—that he has waste strength, power to spare. The English are so rich, and seem to have established a tap-root in the bowels of the planet, because they are constitutionally fertile and creative.

But a man must keep an eye on his servants, if he would not have them rule him. Man is a shrewd inventor, and is ever taking the hint of a new machine from his own structure, adapting some secret of his own anatomy in iron, wood, and leather, to some required function in the work of the world. But it is found that the machine unmans the user. What he gains in making cloth, he loses in general power. There should be temperance in making cloth, as well as in eating. A man should not be a silk-worm; nor a nation a tent of caterpillars. The robust rural Saxon degenerates in the mills to the Leicester stockinger, to the imbecile Manchester spinner—far on the way to be spiders and needles. The incessant repetition of the same hand-work dwarfs the man, robs him of his strength, wit, and versatility, to make a pin-polisher, a buckle-maker, or any other specialty; and presently, in a change of industry, whole towns are sacrificed like ant-hills, when the fashion of shoe-strings supersedes buckles, when

cotton takes the place of linen, or railways of turnpikes, or when commons are inclosed by landlords. Then society is admonished of the mischief of the division of labour, and that the best political economy is care and culture of men; for, in these crises, all are ruined except such as are proper individuals, capable of thought, and of new choice and the application of their talent to new labour. Then again come in new calamities. England is aghast at the disclosure of her fraud in the adulteration of food, of drugs, and of almost every fabric in her mills and shops; finding that milk will not nourish, nor sugar sweeten, nor bread satisfy, nor pepper bite the tongue, nor glue stick. In true England all is false and forged. This too is the reaction of machinery, but of the larger machinery of commerce. 'Tis not, I suppose, want of probity, so much as the tyranny of trade, which necessitates a perpetual competition of underselling, and that again a perpetual deterioration of the fabric.

The machinery has proved, like the balloon, unmanageable, and flies away with the aeronaut. Steam, from the first, hissed and screamed to warn him; it was dreadful with its explosion, and crushed the engineer. The machinist has wrought and watched, engineers and firemen without number have been sacrificed in learning to tame and guide the monster. But harder still it has proved to resist and rule the dragon Money, with his paper wings. Chancellors and Boards of Trade, Pitt, Peel, and Robinson, and their Parliaments, and their whole generation, adopted false principles, and went to their graves in the belief that they were enriching the country which they were impoverishing. They congratulated each other on ruinous expedients. It is rare to find a merchant who knows why a crisis occurs in trade, why prices rise or fall, or who knows the mischief of paper money. In the culmination of national prosperity, in the annexation of countries; building of ships, depôts, towns; in the influx of tons of gold and silver; amid the chuckle of chancellors and financiers, it was found that bread rose to famine prices, that the yeoman was forced to sell his cow and pig, his tools, and his acre of land; and the dreadful barometer of the poor rates was touching the point of ruin. The poor-rate was sucking in the solvent classes, and forcing an exodus of farmers and mechanics. What befalls from the violence of financial crises, befalls daily in the violence of artificial legislation.

Such a wealth has England earned, ever new, bounteous, and augmenting. But the question recurs, does she take the step beyond, namely, to the wise use, in view of the supreme wealth of nations? We estimate the wisdom of nations by seeing

what they did with their surplus capital. And, in view of these injuries, some compensation has been attempted in England. A part of the money earned returns to the brain to buy schools, libraries, bishops, astronomers, chemists, and artists with; and a part to repair the wrongs of this intemperate weaving, by hospitals, savings-banks, Mechanics' Institutes, public grounds, and other charities and amenities. But the antidotes are frightfully inadequate, and the evil requires a deeper cure, which time and a simpler social organization must supply. At present, she does not rule her wealth. She is simply a good England, but no divinity, or wise and instructed soul. She, too, is in the stream of fate, one victim more in a common catastrophe.

But being in the fault, she has the misfortune of greatness to be held as the chief offender. England must be held responsible for the despotism of expense. Her prosperity, the splendour which so much manhood and talent and perseverance has thrown upon vulgar aims, is the very argument of materialism. Her success strengthens the hands of base wealth. Who can propose to youth poverty and wisdom, when mean gain has arrived at the conquest of letters and arts; when English success has grown out of the very renunciation of principles, and the dedication to outsidery? A civility of trifles, of money and expense, an erudition of sensation takes place, and the putting as many impediments as we can between the man and his objects. Hardly the bravest among them have the manliness to resist it successfully. Hence, it has come that not the aims of a manly life, but the means of meeting a certain ponderous expense, is that which is to be considered by a youth in England, emerging from his minority. A large family is reckoned a misfortune. And it is a consolation in the death of the young, that a source of expense is closed.

XI.—ARISTOCRACY.

THE feudal character of the English state, now that it is getting obsolete, glares a little, in contrast with the democratic tendencies. The inequality of power and property shocks republican nerves. Palaces, halls, villas, walled parks, all over England, rival the splendour of royal seats. Many of the halls, like Haddon, or Kedleston, are beautiful desolations. The proprietor never saw them, or never lived in them. Primogeniture built these sumptuous piles, and, I suppose, it is the sentiment of every traveller, as it was mine, 'Twas well to come ere these were gone. Primogeniture is a cardinal rule of

spite of broken faith, stolen charters, and the devastation of society by the profligacy of the court, we take sides as we read for the loyal England and King Charles's "return to his right," with his Cavaliers,—knowing what a heartless trifle he is, and what a crew of God-forsaken robbers they are. The people of England knew as much. But the fair idea of a settled government connecting itself with heraldic names, with the written and oral history of Europe, and, at last, with the Hebrew religion, and the oldest traditions of the world, was too pleasing a vision to be shattered by a few offensive realities, and the politics of shoemakers and costermongers. The hopes of the commoners take the same direction with the interest of the patricians. Every man who becomes rich buys land, and does what he can to fortify the nobility, into which he hopes to rise. The Anglican clergy are identified with the aristocracy. Time and law have made the joining and moulding perfect in every part. The Cathedrals, the Universities, the national music, the popular romances, conspire to uphold the heraldry, which the current politics of the day are sapping. The taste of the people is conservative. They are proud of the castles, and of the language and symbol of chivalry. Even the word lord is the luckiest style that is used in any language to designate a patrician. The superior education and manners of the nobles recommend them to the country.

The Norwegian pirate got what he could, and held it for his eldest son. The Norman noble, who was the Norwegian pirate baptized, did likewise. There was this advantage of western over oriental nobility, that this was recruited from below. English history is aristocracy with the doors open. Who has courage and faculty, let him come in. Of course, the terms of admission to this club are hard and high. The selfishness of the nobles comes in aid of the interest of the nation to require signal merit. Piracy and war gave place to trade, politics, and letters; the war-lord to the law-lord; and the law-lord to the merchant and the mill-owner; but the privilege was kept, whilst the means of obtaining it were changed.

The foundations of these families lie deep in Norwegian exploits by sea, and Saxon sturdiness on land. All nobility in its beginnings was somebody's natural superiority. The things these English have done were not done without peril of life, nor without wisdom and conduct; and the first hands, it may be presumed, were often challenged to show their right to

their honours, or yield them to better men. "He that will be a head, let him be a bridge," said the Welsh chief Benegridran, when he carried all his men over the river on his back. "He shall have the book," said the mother of Alfred, "who can read it;" and Alfred won it by that title: and I make no doubt that feudal tenure was no sinecure, but baron, knight, and tenant, often had their memories refreshed, in regard to the service by which they held their lands. The De Veres, Bohuns, Mowbrays, and Plantagenets were not addicted to contemplation. The middle age adorned itself with proofs of manhood and devotion. Of Richard Beauchamp, Earl of Warwick, the Emperor told Henry V. that no Christian king had such another knight for wisdom, nurture, and manhood, and caused him to be named, "Father of curtesie." "Our success in France," says the historian, "lived and died with him."^{*}

The war-lord earned his honours, and no donation of land was large, as long as it brought the duty of protecting it, hour by hour, against a terrible enemy. In France and in England, the nobles were, down to a late day, born and bred to war: and the duel, which in peace still held them to the risks of war, diminished the envy that, in trading and studious nations, would else have pried into their title. They were looked on as men who played high for a great stake.

Great estates are not sinecures, if they are to be kept great. A creative economy is the fuel of magnificence. In the same line of Warwick, the successor next but one to Beauchamp was the stout earl of Henry VI. and Edward IV. Few esteemed themselves in the mode, whose head was not adorned with the black ragged staff, his badge. At his house in London, six oxen were daily eaten at a breakfast; and every tavern was full of his meat; and who had any acquaintance in his family, should have as much boiled and roast as he could carry on a long dagger.

The new age brings new qualities into request, the virtues or pirates gave way to those of planters, merchants, senators, and scholars. Comity, social talent, and fine manners, no doubt, have had their part also. I have met somewhere with a historiette, which, whether more or less true in its particulars, carries a general truth. "How came the Duke of Bedford, by his great landed estates? His ancestor having travelled on the continent, a lively, pleasant man, became the companion of a foreign prince wrecked on the Dorsetshire coast, where Mr. Russell lived. The prince recommended him to Henry VIII., who, liking his company, gave him a large share of the plundered church lands."

^{*} Fuller's Worthies. II. p. 472.

The pretence is that the noble is of unbroken descent from the Norman, and has never worked for eight hundred years. But the fact is otherwise. Where is Bohun? where is De Vere? The lawyer, the farmer, the silkmercer lies *perdu* under the coronet, and winks to the antiquary to say nothing; especially skilful lawyers, nobody's sons, who did some piece of work at a nice moment for government, and were rewarded with crinine.

The national tastes of the English do not lead them to the life of the courtier, but to secure the comfort and independence of their homes. The aristocracy are marked by their predilection for country life. They are called the county families. They have often no residence in London, and only go thither a short time, during the season, to see the opera; but they concentrate the love and labour of many generations on the building, planting, and decoration of their homesteads. Some of them are too old and too proud to wear titles, or, as Sheridan said of Coke, "disdain to hide their head in a coronet;" and some curious examples are cited to show the stability of English families. Their proverb is, that fifty miles from London, a family will last a hundred years; at a hundred miles, two hundred years; and so on; but I doubt that steam, the enemy of time, as well as of space, will disturb these ancient rules. Sir Henry Wotton says of the first Duke of Buckingham, "He was born at Brookeby in Leicestershire, where his ancestors had chiefly continued about the space of four hundred years, rather without obscurity, than with any great lustre."* Wrexall says, that, in 1781, Lord Surrey, afterwards Duke of Norfolk, told him, that when the year 1783 should arrive, he meant to give a grand festival to all the descendants of the body of Jockey of Norfolk, to mark the day when the dukedom should have remained three hundred years in their house, since its creation by Richard III. Pepys tells us, in writing of an Earl Oxford in 1666, that the honour had now remained in that name and blood six hundred years.

This long descent of families and this cleaving through ages to the same spot of ground captivates the imagination. It has too a connection with the names of the towns and districts of the country.

The names are excellent,—an atmosphere of legendary melody spread over the land. Older than all epics and histories, which clothe a nation, this undershirt sits close to the body. What history too, and what stores of primitive and savage observation it infolds! Cambridge is the bridge of the Cam; Sheffield the field of the river Sheaf; Leicester the *castra*

* *Reliquiæ Wottonianæ*, p. 208

or camp of the Lear or Leir (now Soar); Rochdale, of the Roch; Exeter or Excester, the *castra* of the Ex; Exmouth, Dartmouth, Sidmouth, Teignmouth, the mouths of the Ex, Dart, Sid, and Teign rivers. Waltham is strong town; Radcliffe is red cliff; and so on:—a sincerity and use in naming very striking to an American, whose country is whitewashed all over by unmeaning names, the cast-off clothes of the country from which its emigrants came; or named at a pinch from a psalm-tune. But the English are those "barbarians" of Jamblichus, who "are stable in their manners, and firmly continue to employ the same words, which also are dear to the gods."

'Tis an old sneer, that the Irish peerage drew their names from playbooks. The English lords do not call their lands after their own names, but call themselves after their lands; as if the man represented the country that bred him; and they rightly wear the token of the glebe that gave them birth; suggesting that the tie is not cut, but that there in London,—the crags of Argyle, the kail of Cornwall, the downs of Devon, the iron of Wales, the clays of Stafford, are neither forgetting nor forgotten, but know the man who was born by them, and who, like the long line of his fathers, has carried that crag, that shore, dale, fen, or woodland, in his blood and manners. It has, too, the advantage of suggesting responsibility. A susceptible man could not wear a name which represented in a strict sense a city or a county of England, without hearing in it a challenge to duty and honour.

The predilection of the patricians for residence in the country, combined with the degree of liberty possessed by the peasant, makes the safety of the English hall. Mirabeau wrote prophetically from England, in 1784, "If revolution break out in France, I tremble for the aristocracy: their chateaux will be reduced to ashes, and their blood spilt in torrents. The English tenant would defend his lord to the last extremity." The English go to their estates for grandeur. The French live at court, and exile themselves to their estates for economy. As they do not mean to live with their tenants, they do not conciliate them, but wring from them the last sous. Evelyn writes from Blois, in 1644, "The wolves are here in such numbers, that they often come and take children out of the streets: yet will not the Duke, who is sovereign here, permit them to be destroyed."

In evidence of the wealth amassed by ancient families, the traveller is shown the palaces in Piccadilly, Burlington House, Devonshire House, Lansdowne House in Berkeley Square, and, lower down in the city, a few noble houses which still withstand in all their amplitude the encroachment of

streets. The Duke of Bedford includes or included a mile square in the heart of London, where the British Museum, once Montague House, now stands, and the land occupied by Woburn Square, Bedford Square, Russell Square. The Marquis of Westminster built within a few years the series of squares called Belgravia. Stafford House is the noblest palace in London. Northumberland House holds its place by Charing Cross. Chesterfield House remains in Audley Street. Sion House and Holland House are in the suburbs. But most of the historical houses are masked or lost in the modern uses to which trade or charity has converted them. A multitude of town palaces contain inestimable galleries of art.

In the country, the size of private estates is more impressive. From Barnard Castle I rode on the highway twenty-three miles from High Force, a fall of the Tees, towards Darlington, past Raby Castle, through the estate of the Duke of Cleveland. The Marquis of Breadalbane rides out of his house a hundred miles in a straight line to the sea, on his own property. The Duke of Sutherland owns the county of Sutherland, stretching across Scotland from sea to sea. The Duke of Devonshire, besides his other estates, owns 96,000 acres in the county of Derby. The Duke of Richmond has 40,000 acres at Goodwood, and 300,000 at Gordon Castle. The Duke of Norfolk's park in Sussex is fifteen miles in circuit. An agriculturist bought lately the island of Lewes, in Hebrides, containing 500,000 acres. The possessions of the Earl of Lonsdale gave him eight seats in Parliament. This is the Heptarchy again: and before the Reform of 1832, one hundred and fifty-four persons sent three hundred and seven members to Parliament. The borough-mongers governed England.

These large domains are growing larger. The great estates are absorbing the small freeholds. In 1786, the soil of England was owned by 250,000 corporations and proprietors; and, in 1822, by 32,000. These broad estates find room in this narrow island. All over England, scattered at short intervals among ship-yards, mills, mines, and forges, are the paradises of the nobles, where the lifelong repose and refinement are heightened by the contrast with the roar of industry and necessity, out of which you have stepped aside.

I was surprised to observe the very small attendance usually in the House of Lords. Out of 573 peers, on ordinary days, only twenty or thirty. Where are they? I asked. "At home on their estates, devoured by *ennui*, or in the Alps, or up the Rhine, in the Harz Mountains, or in Egypt, or in India, or the Ghauts." But, with such interests at stake, how can these men afford to neglect them? "O," replied my friend, "why

should they work for themselves, when every man in England works for them, and will suffer before they come to harm?" The hardest radical instantly uncovers, and changes his tone to a lord. It was remarked, on the 10th April, 1848 (the day of the Chartist demonstration), that the upper classes were, for the first time, actively interesting themselves in their own defence, and men of rank were sworn special constables, with the rest. "Besides, why need they sit out the debate? Has not the Duke of Wellington, at this moment, their proxies—the proxies of fifty peers in his pocket, to vote for them, if there be an emergency?"

It is however true, that the existence of the House of Peers as a branch of the government entitles them to fill half the Cabinet; and their weight of property and station give them a virtual nomination of the other half; whilst they have their share in the subordinate offices, as a school of training. This monopoly of political power has given them their intellectual and social eminence in Europe. A few law lords and a few political lords take the brunt of public business. In the army, the nobility fill a large part of the high commissions, and give to these a tone of expense and splendour, and also of exclusiveness. They have borne their full share of duty and danger in this service; and there are few noble families which have not paid in some of their members, the debt of life or limb, in the sacrifices of the Russian war. For the rest, the nobility have the lead in matters of state, and of expense; in questions of taste, in social usages, in convivial and domestic hospitalities. In general, all that is required of them is to sit securely, to preside at public meetings, to countenance charities, and to give the example of that decorum so dear to the British heart.

If one asks, in the critical spirit of the day, what service this class have rendered?—uses appear, or they would have perished long ago. Some of these are easily enumerated, others more subtle make a part of unconscious history. Their institution is one step in the progress of society. For a race yields a nobility in some form, however we name the lords, as surely as it yields women.

The English nobles are high-spirited, active, educated men, born to wealth and power, who have run through every country, and kept in every country the best company, have seen every secret of art and nature, and, when men of any ability or ambition, have been consulted in the conduct of every important action. You cannot wield great agencies without lending yourself to them, and, when it happens that the spirit of the Earl meets his rank and duties, we have the best examples of behaviour. Power of any kind readily

appears in the manners; and beneficent power, *le talent de bien faire*, gives a majesty which cannot be concealed or resisted.

These people seem to gain as much as they lose by their position. They survey society, as from the top of St. Paul's, and, if they never hear plain truth from men, they see the best of everything, in every kind, and they see things so grouped and amassed as to infer easily the sum and genius, instead of tedious particularities. Their good behaviour deserves all its fame, and they have that simplicity, and that air of repose, which are the finest ornament of greatness.

The upper classes have only birth, say the people here, and not thoughts. Yes, but they have manners; and, 'tis wonderful, how much talent runs into manners—nowhere and never so much as in England. They have the sense of superiority, the absence of all the ambitious effort which disgusts in the aspiring classes, a pure tone of thought and feeling, and the power to command, among their other luxuries, the presence of the most accomplished men in their festive meetings.

Loyalty is in the English a sub-religion. They wear the laws as ornaments, and walk by their faith in their painted May-Fair, as if among the forms of gods. The economist of 1855 who asks, of what use are the lords? may learn of Franklin to ask, of what use is a baby? They have been a social church proper to inspire sentiments mutually honouring the lover and the loved. Politeness is the ritual of society, as prayers are of the church; a school of manners, and a gentle blessing to the age in which it grew. 'Tis a romance adorning English life with a larger horizon; a midway heaven, fulfilling to their sense their fairy tales and poetry. This, just as far as the breeding of the nobleman really made him brave, handsome, accomplished, and great-hearted.

On general grounds, whatever tends to form manners, or to finish men, has a great value. Every one who has tasted the delight of friendship, will respect every social guard which our manners can establish, tending to secure from the intrusion of frivolous and distasteful people. The jealousy of every class to guard itself, is a testimony to the reality they have found in life. When a man once knows that he has done justice to himself, let him dismiss all terrors of aristocracy as superstitions, so far as he is concerned. He who keeps the door of a mine, whether of cobalt, or mercury, or nickel, or plumbago, securely knows that the world cannot do without him. Everybody who is real is open and ready for that which is also real.

Besides, these are they who make England that strongbox and museum it is; who gather and protect works of art dragged from amidst burning cities and revolutionary coun-

tries, and brought hither out of all the world. I lock with respect at houses six, seven, eight hundred, or, like Warwick Castle, nine hundred years old. I pardoned high park-fences, when I saw, that, besides does and pheasants, these have preserved Arundel marbles, Towneley galleries, Howard and Spenserian libraries, Warwick and Portland vases, Saxon manuscripts, monastic architectures, millennial trees, and breeds of cattle elsewhere extinct. In these manors, after the frenzy of war and destruction subsides a little, the antiquary finds the frailest Roman jar, or crumbling Egyptian mummy-case, without so much as a new layer of dust, keeping the series of history unbroken, and waiting for its interpreter, who is sure to arrive. These lords are the treasurers and librarians of mankind, engaged by their pride and wealth to this function.

Yet there were other works for British Dukes to do. George Loudon, Quintinye, Evelyn, had taught them to make gardens. Arthur Young, Bakewell, and Mechi, have made them agricultural. Scotland was a camp until the day of Culloden. The Dukes of Athol, Sutherland, Buccleuch, and the Marquis of Breadalbane, have introduced the rape-culture, the sheep-farm, wheat, drainage, the plantation of forests, the artificial replenishment of lakes and ponds with fish, the renting of game-preserves. Against the cry of the old tenantry, and the sympathetic cry of the English press, they have rooted out and planted anew, and now six millions of people live, and live better on the same land that fed three millions.

The English barons, in every period, have been brave and great, after the estimate and opinion of their times. The grand old halls scattered up and down in England, are dumb vouchers to the state and broad hospitality of their ancient lords. Shakespeare's portraits of good Duke Humphrey, of Warwick, of Northumberland, of Talbot, were drawn in strict consonance with the traditions. A sketch of the Earl of Shrewsbury, from the pen of Queen Elizabeth's Archbishop Parker; * Lord Herbert of Cherbury's autobiography; the letters and essays of Sir Philip Sidney; the anecdotes preserved by the antiquaries Fuller and Collins; some glimpses at the interiors of noble houses, which we owe to Pepys and Evelyn; the details which Ben Jonson's masques (performed at Kenilworth, Althorpe, Belvoir, and other noble houses) record or suggest; down to Aubrey's passages of the life of Hobbes in the house of the Earl of Devon, are favourable pictures of a romantic style of manners. Penshurst still shines for us, and its Christmas revels, "where logs not turn,

* Dibdin's *Literary Reminiscences*, vol. 1, xli.

"Comus" was written, and the company nobly bred which performed it with knowledge and sympathy. In the roll of nobles, are found poets, philosophers, chemists, astronomers, also men of solid virtues and of lofty sentiments; often they have been the friends and patrons of genius and learning, and especially of the fine arts; and at this moment, almost every great house has its sumptuous picture-gallery.

Of course, there is another side to this gorgeous show. Every victory was the defeat of a party only less worthy. Castles are proud things, but 'tis safest to be outside of them. War is a foul game, and yet war is not the worst part of aristocratic history. In later times, when the baron, educated only for war, with his brains paralyzed by his stomach, found himself idle at home, he grew fat and wanton, and a sorry brute. Granmont, Pepys, and Evelyn, show the kennels to which the King and court went in quest of pleasure. Prostitutes taken from the theatres were made Duchesses, their bastards Dukes and Earls. "The young men sat uppermost, the old serious lords were out of favour." The discourse that the King's companions had with him was "poor and frothy." No man who valued his head might do what these pot-companions familiarly did with the King. In logical sequence of these dignified revels, Pepys can tell the beggarly shifts to which the King was reduced, who could not find paper at his council table, and "no handkerchers" in his wardrobe, "and but three bands to his neck," and the linen-draper and the stationer were out of pocket, and refusing to trust him, and the baker will not bring bread any longer. Meantime, the English Channel was swept, and London threatened by the Dutch fleet, manned too by English sailors, who, having been cheated of their pay for years by the King, enlisted with the enemy.

The Selwyn correspondence in the reign of George III., discloses a rottenness in the aristocracy, which threatened to decompose the state. The sycophancy and sale of votes and honour, for place and title; lowliness, gaming, smuggling, bribery, and cheating; the sneer at the childish indiscretion of quarrelling with ten thousand a year; the want of ideas; the splendour of the titles, and the apathy of the nation, are instructive, and make the reader pause and explore the firm bounds which confined these vices to a handful of rich men. In the reign of the Fourth George, things do not seem to have mended, and the rotten debauchee let down from a window

by an inclined plane into his coach to take the air, was a scandal to Europe which the ill fame of his Queen and of his family did nothing to retrieve.

Under the present reign, the perfect decorum of the Court is thought to have put a check on the gross vices of the aristocracy; yet gaming, racing, drinking, and mistresses, bring them down, and the democrat can still gather scandals, if he will. Dismal anecdotes abound, verifying the gossip of the last generation of Dukes served by bailiffs, with all their plate in pawn; of great lords living by the showing of their houses; and of an old man wheeled in his chair from room to room, whilst his chambers are exhibited to the visitor for money; of ruined Dukes and Earls living in exile for debt. The historic names of the Buckingham, Beaufort, Marlboroughs, and Hertfords, have gained no new lustre, and now and then darker scandals break out, ominous as the new chapters added under the Orleans dynasty to the "*Causes Célèbres*" in France. Even peers, who are men of worth and public spirit, are overtaken and embarrassed by their vast expense. The respectable Duke of Devonshire, willing to be the Mæcenas and Lucullus of his island, is reported to have said, that he cannot live at Chatsworth but one month in the year. Their many houses eat them up. They cannot sell them, because they are entailed. They will not let them, for pride's sake, but keep them empty, aired, and the grounds mown and dressed, at a cost of four or five thousand pounds a year. The spending is for a great part in servants, in many houses exceeding a hundred.

Most of them are only chargeable with idleness, which, because it squanders such vast power of benefit, has the mischief of crime. "They might be little Providences on earth," said my friend, "and they are, for the most part, jockeys and fops." Campbell says, "acquaintance with the nobility, I could never keep up. It requires a life of idleness, dressing, and attendance on their parties." I suppose, too, that a feeling of self-respect is driving cultivated men out of this society, as if the noble were slow to receive the lessons of the times, and had not learned to disguise his pride of place. A man of wit, who is also one of the celebrities of wealth, and fashion, confessed to his friend, that he could not enter their houses without being made able to feel that they were great lords, and he a low plebeian. With the tribe of *artistes*, including the musical tribe, the patrician morgue keeps no terms, but excludes them. When Julia Grisi and Mario sang at the houses of the Duke of Wellington and other grandees, a cord was stretched between the singer and the company.

When every noble was a soldier, they were carefully bred to

great personal prowess. The education of a soldier is a simpler affair than that of an Earl in the nineteenth century. And this was very seriously pursued; they were expert in every species of equestrian, to the most dangerous practices, and this down to the accession of William of Orange. But graver men appear to have trained their sons for civil affairs. Elizabeth extended her thought to the future; and Sir Philip Sidney in his letter to his brother, and Milton and Evelyn, gave plain and hearty counsel. Already, too, the English noble and squire were preparing for the career of the country gentleman, and his peaceable expense. They went from city to city, learning receipts to make perfumes, sweet powders, pomanders, antidotes, gathering seeds, gems, coins, and divers curiosities, preparing for a private life thereafter, in which they should take pleasure in these recreations.

All advantages given to absolve the young patrician from intellectual labour are of course mistaken. "In the university, noblemen are exempted from the public exercises for the degree, &c., by which they attain a degree called *honorary*. At the same time, the fees they have to pay for matriculation, and on all other occasions, are much higher."* Fuller records "the observation of foreigners, that Englishmen, by making their children gentlemen, before they are men, cause they are so seldom wise men." This cockering justifies Dr. Johnson's bitter apology for primogeniture, "that it makes but one fool in a family."

The revolution in society has reached this class. The great powers of industrial art have no exclusion of name or blood. The tools of our time, namely, steam, ships, printing, money, and popular education, belong to those who can handle them: and their effect has been, that advantages once confined to men of family, are now open to the whole middle class. The road that grandeur levels for his coach, toil can travel in his cart.

This is more manifest every day, but I think it is true throughout English history. English history, wisely read, is the vindication of the brain of that people. Here, at last, were climate and condition friendly to the working faculty. Who now will work and dare, shall rule. This is the charter, or the chartism, which fogs, and scus, and rains proclaimed—that intellect and personal force should make the law; that industry and administrative talent should administer; that work should wear the crown. I know that not this, but something else is pretended. The fiction with which the noble and the bystander equally please themselves is, that the former is of unbroken descent from the Norman, and so has never worked for eight

* Huber. *History of English Universities*.

hundred years. All the families are new, but the name is old, and they have made a covenant with their memories not to disturb it. But the analysis of the peerage and gentry shows the rapid decay and extinction of old families, the continual recruiting of these from new blood. The doors, though ostentatiously guarded, are really open, and hence the power of the bribe. All the barriers to rank only whet the thirst, and enhance the prize. "Now," said Nelson, when clearing for battle, "a peerage, or Westminster Abbey;" "I have no illusion left," said Sydney Smith, "but the Archbishop of Canterbury." "The lawyers," said Burke, "are only birds of passage in this House of Commons," and then added, with a new figure, "they have their best bower anchor in the House of Lords."

Another stride that has been taken, appears in the perishing of heraldry. Whilst the privileges of nobility are passing to the middle class, the badge is discredited, and the titles of lordship are getting musty and cumbersome. I wonder that sensible men have not been already impatient of them. They belong, with wigs, powder, and scarlet coats, to an earlier age, and may be advantageously consigned, with paint and tattoo, to the dignitaries of Australia and Polynesia.

A multitude of English, educated at the universities, bred into their society with manners, ability, and the gifts of fortune, are every day confronting the peers on a footing of equality, and outstripping them, as often, in the race of honour and influence. That cultivated class is large and ever enlarging. It is computed that, with titles and without, there are seventy thousand of these people coming and going in London, who make up what is called high society. They cannot shut their eyes to the fact that an untitled nobility possess all the power without the inconveniences that belong to rank, and the rich Englishman goes over the world at the present day, drawing more than all the advantages which the strongest of his Kings could command.

XII.—UNIVERSITIES.

OF British universities, Cambridge has the most illustrious names on its list. At the present day, too, it has the advantage of Oxford, counting in its *alumni* a greater number of distinguished scholars. I regret that I had but a single day wherein to see King's College Chapel, the beautiful lawns and gardens of the colleges, and a few of its gownsmen.

But I availed myself of some repeated invitations to Oxford,

where I had introductions to Dr. Daubeny, Professor of Botany, and to the Regius Professor of Divinity, as well as to a valued friend, a Fellow of Oriel, and went thither on the last day of March, 1848. I was the guest of my friend in Oriel, was housed close upon that college, and I lived on college hospitalities.

My new friends showed me their cloisters, the Bodleian Library, the Randolph Gallery, Merton Hall, and the rest. I saw several faithful, highminded young men, some of them in the mood of making sacrifices for peace of mind—a topic, of course, on which I had no counsel to offer. Their affectionate and gregarious ways reminded me at once of the habits of our Cambridge men, though I imputed to these English an advantage in their secure and polished manners. The halls are rich with oaken wainscoting and ceiling. The pictures of the founders hang from the walls; the tables glitter with plate. A youth came forward to the upper table, and pronounced the ancient form of grace before meals, which, I suppose, has been in use here for ages, *Benedictus benedict; benedicatur, benedicatur*.

It is a curious proof of the English use and wont, or of their good nature, that these young men are locked up every night at nine o'clock, and the porter at each hall is required to give the name of any belated student who is admitted after that hour. Still more descriptive is the fact, that out of twelve hundred young men, comprising the most spirited of the aristocracy, a duel has never occurred.

Oxford is old, even in England, and conservative. Its foundations date from Alfred, and even from Arthur, if, as is alleged, the Pheryllt of the Druids had a seminary here. In the reign of Edward I., it is pretended, here were thirty thousand students; and nineteen most noble foundations were then established. Chaucer found it as firm as if it had always stood and it is, in British story, rich with great names, the school of the island, and the link of England to the learned of Europe. Hither came Erasmus, with delight, in 1497. Albericus Gentilis, in 1580, was relieved and maintained by the university. Albert Alaskie, a noble Polishman, Prince of Sirad, who visited England to admire the wisdom of Queen Elizabeth, was entertained with stage-plays in the Refectory of Christ Church, in 1583. Isaac Casaubon, coming from Henri Quatre of France, by invitation of James I., was admitted to Christ's College, in July, 1613. I saw the Ashmolean Museum, whither Elias Ashmole, in 1682, sent twelve cart-loads of rarities. Here indeed was the Olympia of all Antony Wood's, and Aubrey's games and heroes, and every inch of ground has its lustre. For Wood's *Athenae Oxonienses*, or

calendar of the writers of Oxford for two hundred years, is a lively record of English manners and merits, and as much a national monument as Purchas's Pilgrims or Hansard's Register. On every side, Oxford is redolent of age and authority. Its gates shut of themselves against modern innovation. It is still governed by the statutes of Archbishop Laud. The books in Merton Library are still chained to the wall. Here, on August 27, 1660, John Milton's *Pro Populo Anglicano Defensio*, and *Iconoclastes* were committed to the flames. I saw the school-court or quadrangle, where, in 1683, the Convocation caused the Leviathan of Thomas Hobbes to be publicly burnt. I do not know whether this learned body have yet heard of the Declaration of American Independence, or whether the Ptolemaic astronomy does not still hold its ground against the novelties of Copernicus.

As many sons, almost so many benefactors. It is usual for a nobleman, or indeed for almost every wealthy student, on quitting college, to leave behind him some article of plate; and gifts of all values, from a hall, or a fellowship, or a library, down to a picture or a spoon, are continually accruing, in the course of a century. My friend Doctor J., gave me the following anecdote. In Sir Thomas Lawrence's collection at London, were the cartoons of Raphael and Michael Angelo. This inestimable prize was offered to Oxford University for seven thousand pounds. The offer was accepted, and the committee charged with the affair had collected three thousand pounds, when, among other friends, they called on Lord Eldon. Instead of a hundred pounds, he surprised them by putting down his name for three thousand pounds. They told him, they should now very easily raise the remainder. "No," he said, "your men have probably already contributed all they can spare; I can as well give the rest;" and he withdrew his cheque for three thousand, and wrote four thousand pounds. I saw the whole collection in April, 1848.

In the Bodleian Library, Dr. Bandinel showed me the manuscript Plato, of the date of A.D. 896, brought by Dr. Clarke from Egypt; a manuscript Virgil, of the same century; the first Bible printed at Mentz, (I believe in 1450); and a duplicate of the same, which had been deficient in about twenty leaves at the end. But, one day, being in Venice, he bought a room full of books and manuscripts,—every scrap and fragment,—for four thousand louis d'ors, and had the doors locked and sealed by the consul. On proceeding, afterwards, to examine his purchase, he found the twenty deficient pages of his Mentz Bible, in perfect order; brought them to Oxford, with the rest of his purchase, and placed them in the volume; but has too much awe for the Providence that appears in

bibliography also, to suffer the reunited parts to be rebound. The oldest building here is two hundred years younger than the frail manuscript brought by Dr. Clarke from Egypt. No candle or fire is ever lighted in the Bodleian. Its catalogue is the standard catalogue on the desk of every library in Oxford. In each several college, they underscore in red ink on this catalogue the titles of books contained in the library of that college,—the theory being that the Bodleian has all books. This rich library spent during the last year (1847) for the purchase of books 1668*l*.

The logical English train a scholar as they train an engineer. Oxford is a Greek factory, as Wilton mills weave carpet, and Sheffield grinds steel. They know the use of a tutor, as they know the use of a horse; and they draw the greatest amount of benefit out of both. The reading men are kept by hard walking, hard riding, and measured eating and drinking, at the top of their condition, and two days before the examination, do no work, but lounge, ride, or run, to be fresh on the college doomsday. Seven years' residence is the theoretic period for a master's degree. In point of fact, it has long been three years' residence, and four years more of standing. This "three years" is about twenty-one months in all.*

"The whole expense," says Professor Sewell, "of ordinary college tuition at Oxford, is about sixteen guineas a year." But this plausible statement may deceive a reader unacquainted with the fact that the principal teaching relied on is private tuition. And the expenses of private tuition are reckoned at from 50*l*. to 70*l*. a year, or, \$1000 for the whole course of three years and a half. At Cambridge \$750 a year is economical, and \$1500 not extravagant.†

The number of students and of residents, the dignity of the authorities, the value of the foundations, the history and the architecture, the known sympathy of entire Britain in what is done there, justify a dedication to study in the undergraduate, such as cannot easily be in America, where his college is half suspected by the freshman to be insignificant in the scale beside trade and politics. Oxford is a little aristocracy in itself, numerous and dignified enough to rank with other estates in the realm; and where fame and secular promotion are to be had for study, and in a direction which has the unanimous respect of all cultivated nations.

This aristocracy, of course, repairs its own losses; fills places, as they fall vacant, from the body of students. The number of fellowships at Oxford is 540, averaging 200*l*. a year, with lodging and diet at the college. If a young American, loving

* Huber, ii. p. 304. † Bristol. Five Years at an English University.

learning, and hindered by poverty, were offered a home, a table, the walks, and the library, in one of these academical palaces, and a thousand dollars a year as long as he chose to remain a bachelor, he would dance for joy. Yet these young men thus happily placed, and paid to read, are impatient of their few checks, and many of them preparing to resign their fellowships. They shuddered at the prospect of dying a Fellow, and they pointed out to me a paralytic old man, who was assisted into the hall. As the number of undergraduates at Oxford is only about 1200 or 1300, and many of these are never competitors, the chance of a fellowship is very great. The income of the nineteen colleges is conjectured at 150,000*l.* a year.

The effect of this drill is the radical knowledge of Greek and Latin, and of mathematics, and the solidity and taste of English criticism. Whatever luck there may be in this or that award, an Eton captain can write Latin longs and shorts, can turn the Court Guide into hexameters, and it is certain that a Senior Classic can quote correctly from the *Corpus Poetarum*, and is critically learned in all the humanities. Greek erudition exists on the Isis and Cam, whether the Maudlin man or the Brazen-nose man be properly ranked or not; the atmosphere is loaded with Greek learning; the whole river has reached a certain height, and kills all that growth of weeds, which this Castalian water kills. The English nature takes culture kindly. So Milton thought. It refines the Norseman. Access to the Greek mind lifts his standard of taste. He has enough to think of, and, unless of an impulsive nature, is indisposed from writing or speaking, by the fulness of his mind, and the new severity of his taste. The great silent crowd of thorough-bred Grecians always known to be around him, the English writer cannot ignore. They prune his orations, and point his pen. Hence, the style and tone of English journalism. The men have learned accuracy and comprehension, logic, and pace, or speed of working. They have bottom, endurance, wind. When born with good constitutions, they make those eupeptic studying-mills, the cast-iron men, the *dura ilia*, whose powers of performance compare with ours, as the steam-hammer with the music-box—Cokes, Mansfields, Seldens, and Bentleys; and when it happens that a superior brain puts a rider on this admirable horse, we obtain those masters of the world who combine the highest energy in affairs, with a supreme culture.

It is contended by those who have been bred at Eton, Harrow, Rugby, and Westminster, that the public sentiment within each of those schools is high-toned and manly; that, in their playgrounds, courage is universally admired, meanness despised, manly feelings and generous conduct are encouraged: that ar

unwritten code of honour deals to the spoiled child of rank, and to the child of upstart wealth, an even-handed justice, purges their nonsense out of both, and does all that can be done to make them gentlemen.

Again, at the universities, it is urged, that all goes to form what England values as the flower of its national life,—a well-educated gentleman. The German Huber, in describing to his countrymen the attributes of an English gentleman, frankly admits, that, “in Germany, we have nothing of the kind. A gentleman must possess a political character, an independent and public position, or, at least, the right of assuming it. He must have average opulence, either of his own, or in his family. He should also have bodily activity and strength, unattainable by our sedentary life in public offices. The race of English gentlemen presents an appearance of manly vigour and form, not elsewhere to be found among an equal number of persons. No other nation produces the stock. And, in England, it has deteriorated. The university is a decided presumption in any man’s favour. And so eminent are the members that a glance at the calendars will show that in all the world one cannot be in better company than on the books of one of the larger Oxford or Cambridge colleges.”*

These seminaries are finishing schools for the upper classes, and not for the poor. The useful is exploded. The definition of a public school is “a school which excludes all that could fit a man for standing behind a counter.”†

No doubt, the foundations have been perverted. Oxford, which equals in wealth several of the smaller European states, shuts up the lectureships which were made “public for all men thereunto to have concurrence;” mis-spends the revenues bestowed for such youths “as should be most meet for towardness, poverty, and painfulness;” there is gross favouritism; many chairs and many fellowships are made beds of ease; and ’tis likely that the university will know how to resist and make inoperative the terrors of parliamentary inquiry; no doubt, their learning is grown obsolete;—but Oxford also has its merits, and I found here also proof of the national fidelity and thoroughness. Such knowledge as they prize they possess and impart. Whether in course or by indirection, whether by a cramming tutor or by examiners with prizes and foundation scholarships, education according to the English notion of it is arrived at. I looked over the Examination Papers of the year 1848, for the various scholarships and fellowships, the Lusby, the Hertford, the Dean-Ireland, and the University, (copies of which were kindly given me by a Greek professor,)

* Huber: History of the English Universities. Newman’s Translation. †

† See Bristed. Five Years in an English University. New York, 1852.

containing the tasks which many competitors had victoriously performed, and I believed they would prove too severe tests for the candidates for a Bachelor's degree in Yale or Harvard. And, in general, here was proof of a more searching study in the appointed directions, and the knowledge pretended to be conveyed was conveyed. Oxford sends out yearly twenty or thirty very able men, and three or four hundred well-educated men.

The diet and rough exercise secure a certain amount of old Norse power. A fop will fight, and, in exigent circumstances, will play the manly part. In seeing these youths, I believed I saw already an advantage in vigour and colour and general habit, over their contemporaries in the American colleges. No doubt much of the power and brilliancy of the reading men is merely constitutional or hygienic. With a hardier habit and resolute gymnastics, with five miles more walking, or five ounces less eating, or with a saddle and gallop of twenty miles a day, with skating and rowing matches, the American would arrive at as robust exegesis, and cheery and hilarious tone. I should readily concede these advantages, which it would be easy to acquire, if I did not find also that they read better than we, and write better.

English wealth falling on their school and university training, makes a systematic reading of the best authors, and to the end of a knowledge how the things whereof they treat really stand: whilst pamphleteer or journalist reading for an argument for a party, or reading to write, or, at all events, for some by-end imposed on them, must read meanly and fragmentarily. Charles I. said, that he understood English law as well as a gentleman ought to understand it.

Then they have access to books; the rich libraries collected at every one of many thousands of houses, give an advantage not to be attained by a youth in this country, when one thinks how much more and better may be learned by a scholar, who, immediately on hearing of a book, can consult it, than by one who is on the quest, for years, and reads inferior books, because he cannot find the best.

Again, the great number of cultivated men keep each other up to a high standard. The habit of meeting well-read and knowing men teaches the art of omission and selection.

Universities are, of course, hostile to geniuses, which seeing and using ways of their own, discredit the routine: as churches and monasteries persecute youthful saints. Yet we all send our sons to college, and, though he be a genius, he must take his chance. The university must be retrospective. The gale that gives direction to the vanes on all its towers blows out of antiquity. Oxford is a library, and the professors must be

librarians. And I should as soon think of quarrelling with the janitor for not magnifying his office by hostile sallies into the street, like the Governor of Kertch or Kinburn, as of quarrelling with the professors for not admiring the young neologists who pluck the beards of Euclid and Aristotle, or for not attempting themselves to fill their vacant shelves as original writers.

It is easy to carp at colleges, and the college, if we will wait for it, will have its own turn. Genius exists there also, but will not answer a call of a committee of the House of Commons. It is rare, precarious, eccentric, and darkling. England is the land of mixture and surprise, and when you have settled it that the universities are moribund, out comes a poetic influence from the heart of Oxford, to mould the opinions of cities, to build their houses as simply as birds their nests, to give veracity to art, and charm mankind, as an appeal to moral order always must. But besides this restorative genius, the best poetry of England of this age, in the old forms, comes from two graduates of Cambridge.

XIII.—RELIGION.

NO people, at the present day, can be explained by their national religion. They do not feel responsible for it; it lies far outside of them. Their loyalty to truth, and their labour and expenditure, rest on real foundations, and not on a national church. And English life, it is evident, does not grow out of the Athanasian creed, or the Articles, or the Eucharist. It is with religion as with marriage. A youth marries in haste; afterwards, when his mind is opened to the reason of the conduct of life, he is asked, what he thinks of the institution of marriage, and of the right relations of the sexes? 'I should have much to say,' he might reply, 'if the question were open, but I have a wife and children, and all question is closed for me.' In the barbarous days of a nation, some *cultus* is formed or imported; altars are built, tithes are paid, priests ordained. The education and expenditure of the country take that direction, and when wealth, refinement, great men, and ties to the world, supervene, its prudent men say, why fight against Fate, or lift these absurdities which are now mountainous? Better find some niche or crevice in this mountain of stone which religious ages have quarried and carved, wherein to bestow yourself, than attempt anything ridiculously and dangerously above your strength, like removing it.

In seeing old castles and cathedrals, I sometimes say, as to-day, in front of Dundee Church tower, which is eight hundred years old, 'this was built by another and a better race than any that now look on it.' And, plainly, there has been great power of sentiment at work in this island, of which these buildings are the proofs: as volcanic basalts show the work of fire which has been extinguished for ages. England felt the full heat of the Christianity which fermented Europe, and drew, like the chemistry of fire, a firm line between barbarism and culture. The power of the religious sentiment put an end to human sacrifices, checked appetite, inspired the crusades, inspired resistance to tyrants, inspired self-respect, set bounds to serfdom and slavery, founded liberty, created the religious architecture—York, Newstead, Westminster, Fountains Abbey, Ripon, Beverley, and Dundee—works to which the key is lost, with the sentiment which created them; inspired the English Bible, the liturgy, the monkish histories, the chronicle of Richard of Devizes. The priest translated the Vulgate, and translated the sanctities of old hagiology into English virtues on English ground. It was a certain affirmative or aggressive state of the Caucasian races. Man awoke refreshed by the sleep of ages. The violence of the northern savages exasperated Christianity into power. It lived by the love of the people. Bishop Wilfrid manumitted two hundred and fifty serfs, whom he found attached to the soil. The clergy obtained respite from labour for the boor on the Sabbath, and on church festivals. "The lord who compelled his boor to labour between sunset on Saturday and sunset on Sunday, forfeited him altogether." The priest came out of the people, and sympathized with his class. The church was the mediator, check, and democratic principle, in Europe. Latimer, Wicliffe, Arundel, Cobham, Antony Parsons, Sir Harry Vane, George Fox, Penn, Bunyan, are the democrats, as well as the saints of their times. The Catholic church, thrown on this toiling, serious people, has made in fourteen centuries a massive system, close fitted to the manners and genius of the country, at once domestical and stately. In the long time, it has blended with everything in heaven above and the earth beneath. It moves through a zodiac of feasts and fasts, names every day of the year, every town and market and headland and monument, and has coupled itself with the almanac, that no court can be held, no field ploughed, no horse shod, without some leave from the church. All maxims of prudence or shop or farm are fixed and dated by the church. Hence, its strength in the agricultural districts. The distribution of land into parishes enforces a church sanction to every civil privilege; and the gradation of the clergy—prelates for the rich, and

The English church has many certificates to show, of humble effective service in humanizing the people, in cheering and refining men, feeding, healing, and educating. It has the seal of martyrs and confessors; the noblest books; a sublime architecture; a ritual marked by the same secular merits, nothing cheap or purchasable.

From this slow-grown church important reactions proceed; much for culture, much for giving a direction to the nation's affection and will to-day. The carved and pictured chapel—its entire surface animated with image and emblem—made the parish church a sort of book and Bible to the people's eye.

Then, when the Saxon instinct had secured a service in the vernacular tongue, it was the tutor and university of the people. In York minster, on the day of the enthronization of the new Archbishop, I heard the service of evening prayer read and chanted in the choir. It was strange to hear the pretty pastoral of the betrothal of Rebecca and Isaac, in the morning of the world, read with circumstantiality in York minster, on the 13th January, 1848, to the decorous English audience, just fresh from the Times newspaper and their wine; and listening with all the devotion of national pride. That was binding old and new to some purpose. The reverence for the Scriptures is an element of civilization, for thus has the history of the world been preserved, and is preserved. Here in England every day a chapter of Genesis, and a leader in the Times.

Another part of the same service on this occasion was not insignificant. Handel's coronation anthem, *God save the King*, was played by Dr. Camidge on the organ, with sublime effect. The minster and the music were made for each other. It was a hint of the part the church plays as a political engine. From his infancy, every Englishman is accustomed to hear daily prayers for the Queen, for the Royal family and the Parliament, by name; and this lifelong consecration of these personages cannot be without influence on his opinions.

The universities, also, are parcel of the ecclesiastical system, and their first design is to form the clergy. Thus the clergy for a thousand years have been the scholars of the nation.

The national temperament deeply enjoys the unbroken order and tradition of its church; the liturgy, ceremony, architecture; the sober grace, the good company, the connection with

* Wordsworth.

the throne, and with history, which adorn it. And whilst it endears itself thus to men of more taste than activity, the stability of the English nation is passionately enlisted to its support, from its inextricable connection with the cause of public order, with politics and with the funds.

Good churches are not built by bad men; at least, there must be probity and enthusiasm somewhere in the society. These minsters were neither built nor filled by atheists. No church has had more learned, industrious, or devoted men; plenty of "clerks and bishops, who, out of their gowns, would turn their backs on no man."* Their architecture still glows with faith in immortality. Heats and genial periods arrive in history, or, shall we say, plenitudes of Divine Presence, by which high tides are caused in the human spirit, and great virtues and talents appear, as in the eleventh, twelfth, thirteenth, and again in the sixteenth and seventeenth centuries, when the nation was full of genius and piety.

But the age of the Wycliffes, Cobhams, Arundels, Becketts; of the Latimers, Mores, Cranmers; of the Taylors, Leightons, Herberts; of the Sherlocks and Butlers, is gone. Silent revolutions in opinion have made it impossible that men like these should return, or find a place in their once sacred stalls. The spirit that dwelt in this church has glided away to animate other activities; and they who come to the old shrines find apes and players rustling the old garments.

The religion of England is part of good-breeding. When you see on the continent the well-dressed Englishman come into his ambassador's chapel, and put his face for silent prayer into his smooth-brushed hat, one cannot help feeling how much national pride prays with him, and the religion of a gentleman. So far is he from attaching any meaning to the words, that he believes himself to have done almost the generous thing, and that it is very condescending in him to pray to God. A great Duke said, on the occasion of a victory, in the House of Lords, that he thought the Almighty God had not been well used by them, and that it would become their magnanimity, after so great successes, to take order that a proper acknowledgment be made. It is the church of the gentry; but it is not the church of the poor. The operatives do not own it, and gentlemen lately testified in the House of Commons that in their lives they never saw a poor man in a ragged coat inside a church.

The torpidity on the side of religion of the vigorous English understanding, shows how much wit and folly can agree in one brain. Their religion is a quotation; their church

* Fuller.

is a doll; and any examination is interdicted with screams of terror. In good company, you expect them to laugh at the fanaticism of the vulgar; but they do not: they are the vulgar.

The English, in common perhaps with Christendom in the nineteenth century, do not respect power, but only performance; value ideas only for an economic result. Wellington esteems a saint only as far as he can be an army chaplain:—"Mr. Briscoll, by his admirable conduct and good sense, got the better of Methodism, which had appeared among the soldiers, and once among the officers." They value a philosopher as they value an apothecary who brings bark or a drench; and inspiration is only some blowpipe, or a finer mechanical aid.

I suspect that there is in an Englishman's brain a valve that can be closed at pleasure, as an engineer shuts off steam. The most sensible and well-informed men possess the power of thinking just so far as the Bishop in religious matters, and as the chancellor of the exchequer in politics. They talk with courage and logic, and show you magnificent results, but the same men who have brought free trade or geology to their present standing, look grave and lofty, and shut down their valve, as soon as the conversation approaches the English church. After that, you talk with a box-turtle.

The action of the university, both in what is taught, and in the spirit of the place, is directed more on producing an English gentleman, than a saint or a psychologist. It ripens a Bishop, and extrudes a philosopher. I do not know that there is more cabalism in the Anglican, than in other churches, but the Anglican clergy are identified with the aristocracy. They say, here, that, if you talk with a clergyman, you are sure to find him well-bred, informed, and candid. He entertains your thought or your project with sympathy and praise. But if a second clergyman come in, the sympathy is at an end: two together are inaccessible to your thought, and, whenever it comes to action, the clergyman invariably sides with his church.

The Anglican church is marked by the grace and good sense of its forms, by the manly grace of its clergy. The gospel it preaches is, 'By taste are ye saved.' It keeps the old structures in repair, spends a world of money in music and building; and in buying Pugin, and architectural literature. It has a general good name for amenity and mildness. It is not in ordinary a persecuting church; it is not inquisitorial, not ever inquisitive, is perfectly well-bred, and can shut its eyes on all proper occasions. If you let it alone, it will let you alone. But its instinct is hostile to all change in politics, literature,

or social a.s.s. The church has not been the founder of the London University, of the Mechanics' Institutes, of the Free School, or whatever aims at diffusion of knowledge. The Platonists of Oxford are as bitter against this heresy as Thomas Taylor.

The doctrine of the Old Testament is the religion of England. The first leaf of the New Testament it does not open. It believes in a Providence which does not treat with levity a pound sterling. They are neither transcendentalists nor Christians. They put up no Socratic prayer, much less any saintly prayer for the Queen's mind; ask neither for light nor right, but say bluntly, "grant her in health and wealth long to live." And one traces this Jewish prayer in all English private history, from the prayers of King Richard, in Richard of Devizes' Chronicle, to those in the diaries of Sir Samuel Romilly, and of Haydon the painter. "Abroad with my wife," writes Pepys piously, "the first time that ever I rode in my own coach; which do make my heart rejoice and praise God, and pray him to bless it to me, and continue it." The bill for the naturalization of the Jews (in 1753) was resisted by petitions from all parts of the kingdom, and by petition from the city of London, reproaching this bill, as "tending extremely to the dishonour of the Christian religion, and extremely injurious to the interests and commerce of the kingdom in general, and of the city of London in particular."

But they have not been able to congeal humanity by act of Parliament. "The heavens journey still and sojourn not," and arts, wars, discoveries, and opinion, go onward at their own pace. The new age has new desires, new enemies, new trades, new charities, and reads the Scriptures with new eyes. The chatter of French politics, the steam-whistle, the hum of the mill, and the noise of embarking emigrants, had quite put most of the old legends out of mind; so that when you came to read the the liturgy to a modern congregation, it was almost absurd in its unfitness, and suggested a masquerade of old costumes.

No chemist has prospered in the attempt to crystallize a religion. It is endogenous, like the skin, and other vital organs. A new statement every day. The prophet and apostle knew this, and the nonconformist confutes the conformists, by quoting the texts they must allow. It is the condition of a religion, to require religion for its expositor. Prophet and apostle can only be rightly understood by prophet and apostle. The statesman knows that the religious element will not fail, any more than the supply of fibrine and chyle; but it is in its nature constructive, and will organize such a church as it wants. The wise legislator will spend on temples,

schools, libraries, colleges, but will skun the enriching of priests. If, in any manner, he can leave the election and paying of the priest to the people, he will do well. Like the Quakers, he may resist the separation of a class of priests, and create opportunity and expectation in the society, to run to meet natural endowment, in this kind. But, when wealth accrues to a chaplaincy, a bishopric, or rectorship, it requires moneyed men for its stewards, who will give it another direction than to the mystics of their day. Of course, money will do after its kind, and will steadily work to unspiritualize and unchurch the people to whom it was bequeathed. The class certain to be excluded from all preferment are the religious—and driven to other churches;—which is nature's *vis medicatrix*.

The curates are ill-paid, and the prelates are overpaid. This abuse draws into the church the children of the nobility, and other unfit persons, who have a taste for expense. Thus a Bishop is only a surpliced merchant. Through his lawn, I can see the bright buttons of the shopman's coat glitter. A wealth like that of Durham makes almost a premium on felony. Brougham, in a speech in the House of Commons on the Irish elective franchise, said, "How will the reverend Bishops of the other house be able to express their due abhorrence of the crime of perjury, who solemnly declare in the presence of God, that when they are called upon to accept a living, perhaps of 4000*l.* a year, at that very instant, they are moved by the Holy Ghost to accept the office and administration thereof, and for no other reason whatever?" The modes of initiation are more damaging than custom-house oaths. The Bishop is elected by the Dean and Prebends of the cathedral. The Queen sends these gentlemen a *congé d'élire*, or leave to elect; but also sends them the name of the person whom they are to elect. They go into the cathedral, chant and pray, and beseech the Holy Ghost to assist them in their choice; and, after these invocations, invariably find that the dictates of the Holy Ghost agree with the recommendations of the Queen.

But you must pay for conformity. All goes well as long as you run with conformists. But you, who are an honest man in other particulars, know that there is alive somewhere a man whose honesty reaches to this point also, that he shall not kneel to false gods, and, on the day when you meet him, you sink into the class of counterfeits. Besides, this succumbing has grave penalties. If you take in a lie, you must take in all that belongs to it. England accepts this ornamented national church, and it glazes the eyes, bloats the flesh, gives the voice a stertorous clang, and clouds the understanding of the receivers.

The English church, undermined by German criticism, had nothing left but tradition, and was led logically back to Romanism. But that was an element which only hot heads could breathe: in view of the educated class, generally, it was not a fact to front the sun; and the alienation of such men from the church became complete.

Nature, to be sure, had her remedy. Religious persons are driven out of the Established Church into sects, which instantly rise to credit, and hold the Establishment in check. Nature has sharper remedies also. The English, abhorring change in all things, abhorring it most in matters of religion, cling to the last rag of form, and are dreadfully given to cant. The English (and I wish it were confined to them, but 'tis a taint in the Anglo-Saxon blood in both hemispheres), the English and the Americans cant beyond all other nations. The French relinquish all that industry to them. What is so odious as the polite bows to God, in our books and newspapers? The popular press is flagitious in the exact measure of its sanctimony, and the religion of the day is a theatrical Sinai, where the thunders are supplied by the property man. The fanaticism and hypocrisy create satire. Punch finds an inexhaustible material. Dickens writes novels on Exeter Hall humanity. Thackeray exposes the heartless high life. Nature revenges herself more summarily by the heathenism of the lower classes. Lord Shaftesbury calls the poor thieves together, and reads sermons to them, and they call it 'gas.' George Borrow summons the Gipsies to hear his discourse on the Hebrews in Egypt, and reads to them the Apostles' Creed in Rommany. "When I had concluded," he says, "I looked around me. The features of the assembly were twisted, and the eyes of all turned upon me with a frightful squint: not an individual present but squinted; the genteel Pepa, the good-humoured Chicharona, the Cosdami, all squinted: the Gipsy jockey squinted worst of all."

The church at this moment is much to be pitied. She has nothing left but possession. If a Bishop meets an intelligent gentleman, and reads fatal interrogations in his eyes, he has no resource but to take wine with him. False position introduces cant, perjury, simony, and ever a lower class of mind and character into the clergy: and, when the hierarchy is afraid of science and education, afraid of piety, afraid of tradition, and afraid of theology, there is nothing left but to quit a church which is no longer one.

But the religion of England,—is it the Established Church? no; is it the sects? no; they are only perpetuations of some private man's dissent, and are to the Established Church as cabs are to a coach, cheaper and more convenient, but really

the same thing. Where dwells the religion? Tell me first where dwells electricity, or motion, or thought, or gesture. They do not dwell or stay at all. Electricity cannot be made fast, mortared up and ended, like London Monument, or the Tower, so that you shall know where to find it, and keep it fixed, as the English do with their things, for evermore; it is passing, glancing, gesticular; it is a traveller, a newness, a surprise, a secret, which perplexes them, and puts them out. Yet, if religion be the doing of all good, and for its sake the suffering of all evil, *souffrir de tout le monde et ne faire souffrir personne*, that divine secret has existed in England from the days of Alfred to those of Romilly, of Clarkson, and of Florence Nightingale, and in thousands who have no fame.

XIV.—LITERATURE.

A STRONG common sense, which it is not easy to unsettle or disturb, marks the English mind for a thousand years: a rude strength newly applied to thought, as of sailors and soldiers who had lately learnt to read. They have no fancy, and never are surprised into a covert or witty word, such as pleased the Athenians and Italians, and was convertible into a fable not long after; but they delight in strong earthy expression, not mistakeable, coarsely true to the human body, and, though spoken among princes, equally fit and welcome to the mob. This homeliness, veracity, and plain style, appear in the earliest extant works, and in the latest. It imports into songs and ballads the smell of the earth, the breath of cattle, and, like a Dutch painter, seeks a household charm, though by pails and pans. They ask their constitutional utility in verse. The kail and herrings are never out of sight. The poet nimbly recovers himself from every sally of the imagination. The English muse loves the farmyard, the lane, and market. She says, with De Stael, "I tramp in the mire with wooden shoes, whenever they would force me into the clouds." For, the Englishman has accurate perceptions; takes hold of things by the right end, and there is no slipperiness in his grasp. He loves the axe, the spade, the oar, the gun, the steam-pipe: he has built the engine he uses. He is materialist, economical, mercantile. He must be treated with sincerity and reality, with muffins, and not the promise of muffins; and prefers his hot chop, with perfect security and convenience in the eating of it, to the chances of the amplest and richest bill of fare, engraved on embossed paper. When he is intellectual, and a

poet or philosopher, he carries the same hard truth and the same keen machinery into the mental sphere. His mind must stand on a fact. He will not be baffled, or catch at clouds, but the mind must have a symbol palpable and resisting. What he relishes in Dante is the vice-like tenacity with which he holds a mental image before the eyes, as if it were a scutcheon painted on a shield. Byron "liked something craggy to break his mind upon." A taste for plain strong speech, what is called a biblical style, marks the English. It is in Alfred, and the Saxon Chronicle, and in the Sagas of the Northmen. Latimer was homely. Hobbes was perfect in the "noble vulgar speech." Donne, Bunyan, Milton, Taylor, Evelyn, Pepys, Hooker, Cotton, and the translators, wrote it. How realistic or materialistic in treatment of his subject is Swift. He describes his fictitious persons as if for the police. Defoe has no insecurity or choice. Hudibras has the same hard mentality,—keeping the truth at once to the senses, and to the intellect.

It is not less seen in poetry. Chaucer's hard painting of his Canterbury pilgrims satisfies the senses. Shakespeare, Spenser, and Milton, in their loftiest ascents, have this national grip and exactitude of mind. This mental materialism makes the value of English transcendental genius; in these writers, and in Herbert, Henry More, Donne, and Sir Thomas Browne. The Saxon materialism and narrowness, exalted into the sphere of intellect, makes the very genius of Shakespeare and Milton. When it reaches the pure element, it treads the clouds as securely as the adamant. Even in its elevations, materialistic, its poetry is common sense inspired; or iron raised to white heat.

The marriage of the two qualities is in their speech. It is a tacit rule of the language to make the frame or skeleton, of Saxon words, and, when elevation or ornament is sought, to interweave Roman; but sparingly; nor is a sentence made of Roman words alone, without loss of strength. The children and labourers use the Saxon unmixed. The Latin unmixed is abandoned to the colleges and Parliament. Mixture is a secret of the English island; and, in their dialect, the male principle is the Saxon; the female, the Latin; and they are combined in every discourse. A good writer, if he has indulged in a Roman roundness, makes haste to chasten and nerve his period by English monosyllables.

When the Gothic nations came into Europe, they found it lighted with the sun and moon of Hebrew and of Greek genius. The tablets of their brain, long kept in the dark, were finely sensible to the double glory. To the images from this twin source (of Christianity and art), the mind became

fruitful as by the incarnation of the Holy Ghost. The English mind flowered in every faculty. The common-sense was surprised and inspired. For two centuries, England was philosophic, religious, poetic. The mental furniture seemed of larger scale; the memory capacious like the storehouse of the rains; the ardour and endurance of study; the boldness and facility of their mental construction; their fancy, and imagination, and easy spanning of vast distances of thought; the enterprise or accosting of new subjects; and, generally, the easy exertion of power, astonish, like the legendary feats of Guy of Warwick. The union of Saxon precision and oriental soaring, of which Shakespeare is the perfect example, is shared in less degree by the writers of two centuries. I find not only the great masters out of all rivalry and reach, but the whole writing of the time charged with a masculine force and freedom.

There is a hygienic simpleness, rough vigour, and closeness to the matter in hand, even in the second and third class of writers; and, I think, in the common style of the people, as one finds it in the citation of wills, letters, and public documents, in proverbs, and forms of speech. The more hearty and sturdy expression may indicate that the savageness of the Norseman was not all gone. Their dynamic brains hurled off their words, as the revolving stone hurls off scraps of grit. I could cite from the seventeenth century sentences and phrases of edge not to be matched in the nineteenth. Their poets by simple force of mind equalized themselves with the accumulated science of ours. The country gentlemen had a posset or drink they called October; and the poets, as if by this hint, knew how to distil the whole season into their autumnal verses: and, as nature, to pique the more, sometimes works up deformities into beauty, in some rare Aspasia, or Cleopatra; and, as the Greek art wrought many a vase or column, in which too long, or too lithe, or nodes, or pits and flaws, are made a beauty of; so these were so quick and vital, that they could charm and enrich by mean and vulgar objects.

A man must think that age well taught and thoughtful, by which masques and poems, like those of Ben Jonson, full of heroic sentiment in a manly style, were received with favour. The unique fact in literary history, the unsurpassed reception of Shakespeare;—the reception proved by his making his fortune; and the apathy proved by the absence of all contemporary panegyric,—seems to demonstrate an elevation in the mind of the people. Judge of the splendour of a nation, by the insignificance of great individuals in it. The manner in which they learned Greek and Latin, before our modern

facilities were yet ready, without dictionaries, grammars, or indexes, by lectures of a professor, followed by their own searchings,—required a more robust memory, and co-operation of all the faculties; and their scholars, Camden, Usher, Selden, Mede, Gataker, Hooker, Taylor, Burton, Bentley, Brian Walton, acquired the solidity and method of engineers.

The influence of Plato tinges the British genius. Their minds loved analogy; were cognisant of resemblances, and climbers on the staircase of unity. 'Tis a very old strife between those who elect to see identity, and those who elect to see discrepancies; and it renews itself in Britain. The poets, of course, are of one part; the men of the world, of the other. But Britain had many disciples of Plato;—More, Hooker, Bacon, Sidney, Lord Brooke, Herbert, Browne, Donne, Spenser, Chapman, Milton, Crashaw, Norris, Cudworth, Berkeley, Jeremy Taylor.

Lord Bacon has the English duality. His centuries of observations, on useful science, and his experiments, I suppose, were worth nothing. One hint of Franklin, or Watt, or Dalton, or Davy, or any one who had a talent for experiment, was worth all his lifetime of exquisite trifles. But he drinks of a diviner stream, and marks the influx of idealism into England. Where that goes, is poetry, health, and progress. The rules of its genesis or its diffusion are not known. That knowledge, if we had it, would supersede all that we call science of the mind. It seems an affair of race, or of meta-chemistry;—the vital point being,—how far the sense of unity, or instinct of seeking resemblances, predominated. For, wherever the mind takes a step, it is, to put itself at once with a larger class, discerned beyond the lesser class with which it has been conversant. Hence, all poetry, and all affirmative action comes.

Bacon, in the structure of his mind, held of the analogists of the idealists, or (as we popularly say, naming from the best example) Platonists. Whoever discredits analogy, and requires heaps of facts, before any theories can be attempted, has no poetic power, and nothing original or beautiful will be produced by him. Locke is as surely the influx of decomposition and of prose, as Bacon and the Platonists, of growth. The Platonic is the poetic tendency; the so-called scientific is the negative and poisonous. 'Tis quite certain, that Spenser, Burns, Byron, and Wordsworth will be Platonists; and that the dull men will be Jockeists. Then politics and commerce will absorb from the educated class men of talents without genius, precisely because such have no resistance.

Bacon, capable of ideas, yet devoted to ends, required in his map of the mind, first of all, universality or *primu philosophia*,

the receptacle for all such profitable observations and axioms as fall not within the compass of any of the special parts of philosophy, but are more common, and of a higher stage. He held this element essential: it is never out of mind; he never spares rebukes for such as neglect it; believing that no perfect discovery can be made in a flat or level, but you must ascend to a higher science. "If any man thinketh philosophy and universality to be idle studies, he doth not consider that all professions are from thence served and supplied, and this I take to be a great cause that has hindered the progression of learning, because these fundamental knowledges have been studied but in passage." He explained himself by giving various quaint examples of the summary or common laws, of which each science has its own illustration. He complains, that "he finds this part of learning very deficient, the profounder sort of wits drawing a bucket now and then for their own use, but the spring-head unvisited. This was the *dry light* which did scorch and offend most men's watery natures." Plato had signified the same sense, when he said, "All the great arts require a subtle and speculative research into the law of nature, since loftiness of thought and perfect mastery over every subject seem to be derived from some such source as this. This Pericles had, in addition to a great natural genius. For, meeting with Anaxagoras, who was a person of this kind, he attached himself to him, and nourished himself with sublime speculations on the absolute intelligence; and imported thence into the oratorical art whatever could be useful to it."

A few generalizations always circulate in the world, whose authors we do not rightly know, which astonish, and appear to be avenues to vast kingdoms of thought, and these are in the world *constants*, like the Copernican and Newtonian theories in physics. In England, these may be traced usually to Shakespeare, Bacon, Milton, or Hooker, even to Van Helmont and Behmen, and do all have a kind of filial retrospect to Plato and the Greeks. Of this kind is Lord Bacon's sentence, that "nature is commanded by obeying her;" his doctrine of poetry, which "accommodates the shows of things to the designs of the mind," or the Zoroastrian definition of poetry, mystical, yet exact, "apparent pictures of unapparent natures;" Spenser's creed, that "soul is form, and doth the body make;" the theory of Berkeley, that we have no certain assurance of the existence of matter; Dr. Samuel Clarke's argument for theism from the nature of space and time; Harrington's political rule, that power must rest on land—a rule which requires to be liberally interpreted; the theory of Swedenborg so cosmically applied by him, that the man makes his heaven

and hell; Hegel's study of civil history, as the conflict of ideas and the victory of the deeper thought; the identity-philosophy of Schelling, couched in the statement that "all difference is quantitative." So the very announcement of the theory of gravitation, of Kepler's three harmonic laws, and even of Dalton's doctrine of definite proportions, finds a sudden response in the mind, which remains a superior evidence to empirical demonstrations. I cite these generalizations, some of which are more recent, merely to indicate a class. Not these particulars, but the mental plane or the atmosphere from which they emanate, was the home and element of the writers and readers in what we loosely call the Elizabethan age (say, in literary history, the period from 1575 to 1625), yet a period almost short enough to justify Ben Jonson's remark on Lord Bacon—"about his time, and within his view, were born all the wits that could honour a nation, or help study."

Such richness of genius had not existed more than once before. These heights could not be maintained. As we find stumps of vast trees in our exhausted soils, and have received traditions of their ancient fertility to tillage, so history reckons epochs in which the intellect of famed races became effete. So it fared with English genius. These heights were followed by a meanness, and a descent of the mind into lower levels; the loss of wings; no high speculation. Locke, to whom the meaning of ideas was unknown, became the type of philosophy, and his "understanding" the measure, in all nations, of the English intellect. His countrymen forsook the lofty sides of Parnassus, on which they had once walked with echoing steps, and disused the studies once so beloved; the powers of thought fell into neglect. The later English want the faculty of Plato and Aristotle, of grouping men in natural classes by an insight of general laws, so deep, that the rule is deduced with equal precision from few subjects or from one, as from multitudes of lives. Shakespeare is supreme in that, as in all the great mental energies. The Germans generalize: the English cannot interpret the German mind. German science comprehends the English. The absence of the faculty in England is shown by the timidity which accumulates mountains of facts, as a bad general wants myriads of men and miles of redoubts, to compensate the inspirations of courage and conduct.

The English shrink from a generalization. "They do not look abroad into universality, or they draw only a bucket-full at the fountain of the First Philosophy for their occasion, and do not go to the spring-head." Bacon, who said this, is almost unique among his countrymen in that faculty, at least

among the prose-writers. Milton, who was the stir or high table-land to let down the English genius from the summits of Shakespeare, used this privilege sometimes in poetry, more rarely in prose. For a long interval afterwards, it is not found. Burke was addicted to generalizing, but his was a shorter line; as his thoughts have less depth, they have less compass. Hume's abstractions are not deep or wise. He owes his fame to one keen observation, that no copula had been detected between any cause and effect, either in physics or in thought; that the term cause and effect was loosely or gratuitously applied to what we know only as consecutive, not at all as causal. Dr. Johnson's written abstractions have little value: the tone of feeling in them makes their chief worth.

Mr. Hallam, a learned and elegant scholar, has written the history of European literature for three centuries—a performance of great ambition, inasmuch as a judgment was to be attempted on every book. But his eye does not reach to the ideal standards: the verdicts are all dated from London: all new thought must be cast into the old moulds. The expansive element which creates literature is steadily denied. Plato is resisted, and his school. Hallam is uniformly polite, but with deficient sympathy; writes with resolute generosity, but is unconscious of the deep worth which lies in the mystics, and which often outvalues as a seed of power and source of revolution all the correct writers and shining reputations of their day. He passes in silence, or dismisses with a kind of contempt, the profounder masters: a lover of ideas is not only uncongenial, but unintelligible. Hallam inspires respect by his knowledge and fidelity, by his manifest love of good books, and he lifts himself to own better than almost any the greatness of Shakespeare, and better than Johnson he appreciates Milton. But in Hallam, or in the firmer intellectual nerve of Mackintosh, one still finds the same type of English genius. It is wise and rich, but it lives on its capital. It is retrospective. How can it discern and hail the new forms that are looming up on the horizon—new and gigantic thoughts which cannot dress themselves out of any old wardrobe of the past?

The essays, the fiction, and the poetry of the day have the like municipal limits. Dickens, with preternatural apprehension of the language of manners, and the varieties of street life, with pathos and laughter, with patriotic and still enlarging generosity, writes London tracts. He is a painter of English details, like Hogarth; local and temporary in his tints and style, and local in his aims. Bulwer, an industrious writer, with occasional ability, is distinguished for his reve-

rence of intellect as a temporality, and appeals to the worldly ambition of the student. His romances tend to fan these low flames. Their novelists despair of the heart. Thackeray finds that God has made no allowance for the poor thing in his universe; more's the pity, he thinks: but 'tis not for us to be wiser: we must renounce ideals, and accept London.

The brilliant Macaulay, who expresses the tone of the English governing classes of the day, explicitly teaches, that *good* means good to eat, good to wear, material commodity; that the glory of modern philosophy is its direction on "fruit;" to yield economical inventions; and that its merit is to avoid ideas, and avoid morals. He thinks it the distinctive merit of the Baconian philosophy, in its triumph over the old Platonic, its disentangling the intellect from theories of the all-Fair and all-Good, and pinning it down to the making a better sick chair and a better wine-why for an invalid; this not ironically, but in good faith; that, "solid advantage," as he calls it, meaning always sensual benefit, is the only good. The eminent benefit of astronomy is the better navigation it creates, to enable the fruit-ships to bring home their lemons and wine to the London grocer. It was a curious result, in which the civility and religion of England for a thousand years, ends, in denying morals, and reducing the intellect to a saucepan. The critic hides his scepticism under the English cant of practical. To convince the reason, to touch the conscience, is romantic pretension. The fine arts fall to the ground. Beauty, except as luxurious commodity, does not exist. It is very certain, I may say in passing, that, if Lord Bacon had been only the sensualist his critic pretends, he would never have acquired the fame which now entitles him to this patronage. It is because he had imagination, the leisure of the spirit, and basked in an element of contemplation out of all modern English atmospheric gauges, that he is impressive to the imaginations of men, and has become a potentate not to be ignored. Sir David Brewster sees the high place of Bacon, without finding Newton indebted to him, and thinks it a mistake. Bacon occupies it by specific gravity or levity, not by any feat he did, or by any tutoring more or less of Newton, &c., but an effect of the same cause which showed itself more pronounced afterwards in Hooke, Boyle, and Halley.

Coleridge, a Catholic mind, with a hunger for ideas, with eyes looking before and after to the highest bards and sages, and who wrote and spoke the only high criticism in his time, is one of those who save England from the reproach of no longer possessing the capacity to appreciate what rarest wit the island has yielded. Yet the misfortune of his life, his

vast attempts but most inadequate performings, failing to accomplish any one masterpiece, seems to mark the closing of an era. Even in him, the traditional Englishman was too strong for the philosopher, and he fell into *accommodations*: and, as Burke had striven to idealize the English State, so Coleridge 'narrowed his mind' in the attempt to reconcile the gothic rule and dogma of the Anglican Church, with eternal ideas. But for Coleridge, and a lurking taciturn minority, uttering itself in occasional criticism, oftener in private discourse, one would say, that in Germany and in America, is the best mind in England rightly respected. It is the surest sign of national decay, when the Brahmins can no longer read or understand the Brahminical philosophy.

In the decomposition and asphyxia that followed all this materialism, Carlyle was driven by his disgust at the pettiness and the cant, into the preaching of Fate. In comparison with all this rottenness, any check, any cleansing, though by fire, seemed desirable and beautiful. He saw little difference in the gladiators, or the "causes" for which they combated: the one comfort was, that they were all going speedily into the abyss together. And his imagination, finding no nutriment in any creation, avenged itself by celebrating the majestic beauty of the laws of decay. The necessities of mental structure force all minds into a few categories, and where impatience of the tricks of men makes Nemesis amiable, and builds altars to the negative Deity, the inevitable recoil is to heroism or the gallantry of the private heart, which decks its immolation with glory, in the unequal combat of will against fate.

Wilkinson, the editor of Swedenborg, the annotator of Fourier, and the champion of Hahnemann, has brought to metaphysics and to physiology a native vigour, with a catholic perception of relations, equal to the highest attempts, and a rhetoric like the armoury of the invincible knights of old. There is in the action of his mind a long Atlantic roll not known except in deepest waters, and only lacking what ought to accompany such powers, a manifest centrality. If his mind does not rest in immovable biases, perhaps the orbit is larger, and the return is not yet: but a master should inspire a confidence that he will adhere to his convictions, and give his present studies always the same high place.

It would be easy to add exceptions to the limitary tone of English thought, and much more easy to adduce examples of excellence in particular veins; and if, going out of the region of dogma, we pass into that of general culture, there is no end to the graces and amenities, wit, sensibility, and erudition, of the learned class. But the artificial succour which marks all English performance, appears in letters also: much of their

æsthetic production is antiquarian and manufactured, and literary reputations have been achieved by forcible men, whose relation to literature was purely accidental, but who were driven by tastes and modes they found in vogue into their several careers. So, at this moment, every ambitious young man studies geology: so members of Parliament are made, and churchmen.

The bias of Englishmen to practical skill has reacted on the national mind. They are incapable of an inutility, and respect the five mechanic powers even in their song. The voice of their modern muse has a slight hint of the steam-whistle, and the poem is created as an ornament and finish of their monarchy, and by no means as the bird of a new morning which forgets the past world in the full enjoyment of that which is forming. They are with difficulty ideal; they are the most conditioned men, as if, having the best conditions, they could not bring themselves to forfeit them. Every one of them is a thousand years old, and lives by his memory: and when you say this, they accept it as praise.

Nothing comes to the book-shops but politics, travels, statistics, tabulation, and engineering, and even what is called philosophy and letters is mechanical in its structure, as if inspiration had ceased, as if no vast hope, no religion, no song of joy, no wisdom, no analogy, existed any more. The tone of colleges, and of scholars and of literary society has this mortal air. I seem to walk on a marble floor, where nothing will grow. They exert every variety of talent on a lower ground, and may be said to live and act in a sub-mind. They have lost all commanding views in literature, philosophy, and science. A good Englishman shuts himself out of three fourths of his mind, and confines himself to one fourth. He has learning, good sense, power of labour, and logic: but a faith in the laws of the mind like that of Archimedes; a belief like that of Euler and Kepler, that experience must follow and not lead the laws of the mind; a devotion to the theory of politics, like that of Hooker, and Milton, and Harrington, the modern English mind repudiates.

I fear the same fault lies in their science, since they have known how to make it repulsive, and bereave nature of its charm;—though perhaps the complaint flies wider, and the vice attaches to many more than to British physicists. The eye of the naturalist must have a scope like nature itself, a susceptibility to all impressions, alive to the heart as well as to the logic of creation. But English science puts humanity to the door. It wants the connection which is the test of genius. The science is false by not being poetic. It isolates the reptile or mollusk it assumes to explain; whilst reptile or mollusk only exists in system, in relation. The poet only sees it as an

inevitable step in the path of the Creator. But, in England, one hermit finds this fact, and another finds that, and lives and dies ignorant of its value. There are great exceptions, of John Hunter, a man of ideas; perhaps of Robert Brown, the botanist; and of Richard Owen, who has imported into Britain the German homologies, and enriched science with contributions of his own, adding sometimes the divination of the old masters to the unbroken power of labour in the English mind. But for the most part, the natural science in England is out of its loyal alliance with morals, and is as void of imagination and free play of thought, as conveyancing. It stands in strong contrast with the genius of the Germans, those semi-Greeks, who love analogy, and, by means of their height of view, preserve their enthusiasm, and think for Europe.

No hope, no sublime augury, cheers the student, no secure striding from experiment onward to a foreseen law, but only a casual dipping here and there, like diggers in California "prospecting for a placer" that will pay. A horizon of brass of the diameter of his umbrella shuts down around his senses. Squalid contentment with conventions, satire at the names of philosophy and religion, parochial and shop-till politics, and idolatry of usage, betray the ebb of life and spirit. As they trample on nationalities to reproduce London and Londoners in Europe and Asia, so they fear the hostility of ideas, of poetry, of religion—ghosts which they cannot lay;—and, having attempted to domesticate and dress the Blessed Soul itself in English broadcloth and guitars, they are tormented with fear that herein lurks a force that will sweep their system away. The artists say, "Nature puts them out;" the scholars have become un-ideal. They parry earnest speech with banter and levity; they laugh you down, or they change the subject. "The fact is," say they over their wine, "all that about liberty, and so forth, is gone by; it won't do any longer." The practical and comfortable oppress them with inexorable claims, and the smallest fraction of power remains for heroism and poetry. No poet dares murmur of beauty out of the precinct of his rhymes. No priest dares hint at a Providence which does not respect English utility. The island is a roaring volcano of fate, of material values, of tariffs, and laws of repression, glutted markets and low prices.

In the absence of the highest aims, of the pure love of knowledge, and the surrender to nature, there is the suppression of the imagination, the priapism of the senses and the understanding; we have the factitious instead of the natural; tasteless expense, arts of comfort, and the rewarding as an illustrious inventor whosoever will contrive one impediment more to interpose between the man and his objects.

Thus poetry is degraded, and made ornamental. Pope and his school wrote poetry fit to put round frosted cake. What did Walter Scott write without stint? a rhymed traveller's guide to Scotland. And the libraries of verses they print have this Birmingham character. How many volumes of well-bred metre we must jingle through, before we can be filled, taught, renewed! We want the miraculous; the beauty which we can manufacture at no mill—can give no account of; the beauty of which Chaucer and Chapman had the secret. The poetry of course is low and prosaic; only now and then, as in Wordsworth, conscientious; or in Byron, passionate; or in Tennyson, factitious. But if I should count the poets who have contributed to the Bible of existing England sentences of guidance and consolation which are still glowing and effective—how few! Shall I find my heavenly bread in the reigning poets? Where is great design in modern English poetry? The English have lost sight of the fact that poetry exists to speak the spiritual law, and that no wealth of description or of fancy is yet essentially new, and out of the limits of prose, until this condition is reached. Therefore the grave old poets, like the Greek artists, headed their designs, and less considered the finish. It was their office to lead to the divine sources, out of which all this, and much more, readily springs, and, if this religion is in the poetry, it raises us to some purpose, and we can well afford some staidness, or hardness, or want of popular tune in the verses.

The exceptional fact of the period is the genius of Wordsworth. He had no master but nature and solitude. "He wrote a poem," says Landor, "without the aid of war." His verse is the voice of sanity in a worldly and ambitious age. One regrets that his temperament was not more liquid and musical. He has written longer than he was inspired. But for the rest, he has no competitor.

Tennyson is endowed precisely in points where Wordsworth wanted. There is no finer ear, nor more command of the keys of language. Colour, like the dawn, flows over the horizon from his pencil, in waves so rich that we do not miss the central form. Through all his refinements, too, he has reached the public—a certificate of good sense and general power, since he who aspires to be the English poet must be as large as London, not in the same kind as London, but in his own kind. But he wants a subject, and climbs no mount of vision to bring its secrets to the people. He contents himself with describing the Englishman as he is, and proposes no better. There are all degrees in poetry, and we must be thankful for every beautiful talent. But it is only a first success, when the ear is gained. The best office of the best poets has been to

show how low and uninspired was their general style, and that only once or twice they have struck the high chord.

That expansiveness which is the essence of the poetic element, they have not. It was no Oxonian, but Hafiz, who said, "Let us be crowned with roses, let us drink wine, and break up the tiresome old roof of heaven into new forms." A stanza of the song of nature the Oxonian has no ear for, and he does not value the salient and curative influence of intellectual action, studious of truth, without a by-end.

By the law of contraries, I look for an irresistible taste for Orientalism in Britain. For a self-conceited modish life, made up of trifles, clinging to a corporeal civilization, hating ideas, there is no remedy like the Oriental largeness. That astonishes and disconcerts English decorum. For once there is thunder it never heard, light it never saw, and power which trifles with time and space. I am not surprised, then, to find an Englishman like Warren Hastings, who had been struck with the grand style of thinking in the Indian writings, deprecating the prejudices of his countrymen, while offering them a translation of the Bhagvat. "Might I, an unlettered man, venture to prescribe bounds to the latitude of criticism, I should exclude, in estimating the merit of such a production, all rules drawn from the ancient or modern literature of Europe, all references to such sentiments or manners as are become the standards of propriety for opinion and action in our own modes, and, equally, all appeals to our revealed tenets of religion and moral duty."* He goes on to bespeak indulgence to "ornaments of fancy unsuited to our taste, and passages elevated to a tract of sublimity into which our habits of judgment will find it difficult to pursue them."

Meantime, I know that a retrieving power lies in the English race, which seems to make any recoil possible; in other words, there is at all times a minority of profound minds existing in the nation, capable of appreciating every soaring of intellect and every hint of tendency. While the constructive talent seems dwarfed and superficial, the criticism is often in the noblest tone, and suggests the presence of the invisible gods. I can well believe what I have often heard, that there are two nations in England; but it is not the Poor and the Rich; nor is it the Normans and Saxons; nor the Celt and the Goth. These are each always becoming the other; for Robert Owen does not exaggerate the power of circumstance. But the two complexions, or two styles of mind—the perceptive class, and the practical finality class—are ever in counterpoise, interacting mutually; one, in hopeless minorities; the other, in huge

masses; one studious, contemplative, experimenting; the other, the ungrateful pupil, scornful of the source, whilst availing itself of the knowledge for gain; these two nations, of genius and of animal force, though the first consist of only a dozen souls, and the second of twenty millions, for ever by their discord and their accord yield the power of the English State.

XV.—THE "TIMES."

THE power of the newspaper is familiar in America, and in accordance with our political system. In England, it stands in antagonism with the feudal institutions, and it is all the more beneficent succour against the secretive tendencies of a monarchy. The celebrated Lord Somers "knew of no good law proposed and passed in his time, to which the public papers had not directed his attention." There is no corner and no night. A relentless inquisition drags every secret to the day, turns the glare of this solar microscope on every malfaisance, so as to make the public a more terrible spy than any foreigner; and no weakness can be taken advantage of by an enemy, since the whole people are already forewarned. Thus England rids herself of those incrustations which have been the ruin of old states. Of course, this inspection is feared. No antique privilege, no comfortable monopoly, but sees surely that its days are counted; the people are familiarized with the reason of reform, and, one by one, take away every argument of the obstructives. "So your grace likes the comfort of reading the newspapers," said Lord Mansfield to the Duke of Northumberland; "mark my words; you and I shall not live to see it, but this young gentleman (Lord Eldon) may, or it may be a little later; but a little sooner or later, these newspapers will most assuredly write the Dukes of Northumberland out of their titles and possessions, and the country out of its King." The tendency in England towards social and political institutions like those of America, is inevitable, and the ability of its journals is the driving force.

England is full of manly, clever, well-bred men who possess the talent of writing off-hand pungent paragraphs, expressing with clearness and courage their opinion on any person or performance. Valuable or not, it is a skill that is rarely found, out of the English journals. The English do this, as they write poetry, as they ride and box, by being educated to it. Hundreds of clever Praeds, and Freres, and Froudes, and Hoods, and Hooks, and Maginns, and Mills, and Maraulays,

make poems, or short essays for a journal, as they make speeches in Parliament and on the hustings, or, as they shoot and ride. It is a quite accidental and arbitrary direction of their general ability. Rude health and spirits, an Oxford education, and the habits of society are implied, but not a ray of genius. It comes of the crowded state of the professions, the violent interest which all men take in politics, the facility of experimenting in the journals, and high pay.

The most conspicuous result of this talent is the "Times" newspaper. No power in England is more felt, more feared, or more obeyed. What you read in the morning in that journal, you shall hear in the evening in all society. It has ears everywhere, and its information is earliest, completest, and surest. It has risen, year by year, and victory by victory, to its present authority. I asked one of its old contributors, whether it had once been abler than it is now? "Never," he said; "these are its palmiest days." It has shown those qualities which are dear to Englishmen, unflinching adherence to its objects, prodigal intellectual ability, and a towering assurance, backed by the perfect organization in its printing-house, and its world-wide net-work of correspondence and reports. It has its own history and famous trophies. In 1820, it adopted the cause of Queen Caroline, and carried it against the King. It adopted a poor-law system, and almost alone lifted it through. When Lord Brougham was in power, it decided against him, and pulled him down. It declared war against Ireland, and conquered it. It adopted the League against the Corn Laws, and, when Cobden had begun to despair, it announced his triumph. It denounced and discredited the French Republic of 1848, and checked every sympathy with it in England, until it had enrolled 200,000 special constables to watch the Chartists, and make them ridiculous on the 10th April. It first denounced and then adopted the new French Empire, and urged the French Alliance and its results. It has entered into each municipal, literary, and social question, almost with a controlling voice. It has done bold and seasonable service in exposing frauds which threatened the commercial community. Meantime, it attacks its rivals by perfecting its printing machinery, and will drive them out of circulation: for the only limit to the circulation of the "Times" is the impossibility of printing copies fast enough; since a daily paper can only be new and seasonable for a few hours. It will kill all but that paper which is diametrically in opposition; since many papers, first and last, have lived by their attacks on the leading journal.

The late Mr. Walter was printer of the "Times," and had gradually arranged the whole *matériel* of it in perfect system.

It is told, that when he demanded a small share in the proprietary, and was refused, he said, "As you please, gentlemen; and you may take away the 'Times' from this office, when you will; I shall publish the 'New Times,' next Monday morning." The proprietors, who had already complained that his charges for printing were excessive, found that they were in his power, and gave him whatever he wished.

I went one day with a good friend to the "Times" office, which was entered through a pretty garden-yard, in Printing-House Square. We walked with some circumspection, as if we were entering a powder-mill; but the door was opened by a mild old woman, and, by dint of some transmission of cards, we were at last conducted into the parlour of Mr. Morris, a very gentle person, with no hostile appearances. The statistics are now quite out of date, but I remember he told us that the daily printing was then 35,000 copies; that on the 1st March, 1848, the greatest number ever printed—54,000 were issued; that, since February, the daily circulation had increased by 8000 copies. The old press they were then using printed five or six thousand sheets per hour; the new machine, for which they were then building an engine, would print twelve thousand per hour. Our entertainer confided us to a courteous assistant to show us the establishment, in which, I think, they employed a hundred and twenty men. I remember, I saw the reporters' room, in which they redact their hasty stenographs, but the editor's room, and who is in it, I did not see, though I shared the curiosity of mankind respecting it.

The staff of the "Times" has always been made up of able men. Old Walter, Sterling, Bacon, Barnes, Alsager, Horace Twiss, Jones Loyd, John Oxenford, Mr. Mozley, Mr. Bailey, have contributed to its renown in their special departments. But it has never wanted the first pens for occasional assistance. Its private information is inexplicable, and recalls the stories of Fouché's police, whose omniscience made it believed that the Empress Josephine must be in his pay. It has mercantile and political correspondents in every foreign city; and its expresses outrun the despatches of the government. One hears anecdotes of the rise of its servants, as of the functionaries of the India House. I was told of the dexterity of one of its reporters, who, finding himself, on one occasion, where the magistrates had strictly forbidden reporters, put his hands into his coat-pocket, and with pencil in one hand, and tablet in the other, did his work.

The influence of this journal is a recognized power in Europe, and, of course, none is more conscious of it than its conductors. The tone of its articles has often been the occasion of comment from the official organs of the con-

tinental courts, and sometimes the ground of diplomatic complaint. What would the "Times" say? is a terror in Paris, in Berlin, in Vienna, in Copenhagen, and in Nepaul. Its consummate discretion and success exhibit the English skill of combination. The daily paper is the work of many hands, chiefly, it is said, of young men recently from the University, and perhaps reading law in chambers in London. Hence the academic elegance, and classic allusion, which adorn its columns. Hence, too, the heat and gallantry of its onset. But the steadiness of the aim suggests the belief that this fire is directed and fed by older engineers; as if persons of exact information, and with settled views of policy, supplied the writers with the basis of fact, and the object to be attained, and availed themselves of their younger energy and eloquence to plead the cause. Both the council and the executive departments gain by this division. Of two men of equal ability, the one who does not write, but keeps his eye on the course of public affairs, will have the higher judicial wisdom. But the parts are kept in concert; all the articles appear to proceed from a single will. The "Times" never disapproves of what itself has said, or cripples itself by apology for the absence of the editor, or the indiscretion of him who held the pen. It speaks out bluff and bold, and sticks to what it says. It draws from any number of learned and skilful contributors; but a more learned and skilful person supervises, corrects, and co-ordinates. Of this closet, the secret does not transpire. No writer is suffered to claim the authorship of any paper; everything good, from whatever quarter, comes out editorially; and thus, by making the paper everything, and those who write it nothing, the character and the awe of the journal gain.

The English like it for its complete information. A statement of fact in the "Times" is as reliable as a citation from Hansard. Then, they like its independence; they do not know, when they take it up, what their paper is going to say: but, above all, for the nationality and confidence of its tone. It thinks for them all; it is their understanding and day's ideal daguerreotyped. When I see them reading its columns, they seem to me becoming every moment more British. It has the national courage, not rash and petulant, but considerate and determined. No dignity or wealth is a shield from its assault. It attacks a Duke as readily as a policeman, and with the most provoking airs of condescension. It makes rude work with the Board of Admiralty. The Bench of Bishops is still less safe. One Bishop fares badly for his rapacity, and another for his bigotry, and a third for his courtliness. It addresses occasionally a hint to Majesty itself, and sometimes a hint

which is taken. There is an air of freedom even in their advertising columns, which speaks well for England to a foreigner. On the days when I arrived in London in 1847, I read among the daily announcements, one offering a reward of fifty pounds to any person who would put a nobleman, described by name and title, late a member of Parliament, into any county jail in England, he having been convicted of obtaining money under false pretences.

Was never such arrogance as the tone of this paper. Every slip of an Oxonian or Cantabrigian who writes his first leader, assumes that we subdued the earth before we sat down to write this particular "Times." One would think, the world was on its knees to the "Times" Office, for its daily breakfast. But this arrogance is calculated. Who would cure for it, if it "surmised," or "dared to confess," or "ventured to predict," &c. No; it is so, and so it shall be.

The morality and patriotism of the "Times" claims only to be representative, and by no means ideal. It gives the argument, not of the majority, but of the commanding class. Its editors know better than to defend Russia, or Austria, or English vested rights, on abstract grounds. But they give a voice to the class who, at the moment, take the lead; and they have an instinct for finding where the power now lies, which is eternally shifting its banks. Sympathizing with, and speaking for the class that rules the hour, yet, being apprised of every ground-swell, every Chartist resolution, every Church squabble, every strike in the mills, they detect the first tremblings of change. They watch the hard and bitter struggles of the authors of each liberal movement, year by year—watching them only to taunt and obstruct them—until, at last, when they see that these have established their fact, that power is on the point of passing to them—they strike in, with the voice of a monarch, astonish those whom they succour, as much as those whom they desert, and make victory sure. Of course, the aspirants see that the "Times" is one of the goods of fortune, not to be won but by winning their cause.

"Punch" is equally an expression of English good sense, as the London "Times." It is the comic version of the same sense. Many of its caricatures are equal to the best pamphlets, and will convey to the eye in an instant the popular view which was taken of each turn of public affairs. Its sketches are usually made by masterly hands, and sometimes with genius; the delight of every class, because uniformly guided by that taste which is tyrannical in England. It is a new trait of the nineteenth century, that the wit and humour of England, as in Punch, so in the humorists, Jerrold, Dickens,

Thackeray, Hood, have taken the direction of humanity and freedom.

The "Times," like every important institution, shows the way to a better. It is a living index of the colossal British power. Its existence honours the people who dare to print all they know, dare to know all the facts, and do not wish to be flattered by hiding the extent of the public disaster. There is always safety in valour. I wish I could add, that this journal aspired to deserve the power it wields, by guidance of the public sentiment to the right. It is usually pretended, in Parliament and elsewhere, that the English press has a high tone—which it has not. It has an imperial tone, as of a powerful and independent nation. But as with other empires, its tone is prone to be official, and even officinal. The "Times" shares all the limitations of the governing classes, and wishes never to be in a minority. If only it dared to cleave to the right, to show the right to be the only expedient, and feed its batteries from the central heart of humanity, it might not have so many men of rank among its contributors, but genius would be its cordial and invincible ally; it might now and then bear the brunt of formidable combinations, but no journal is ruined by wise courage. It would be the natural leader of British reform; its proud function, that of being the voice of Europe, the defender of the exile and patriot against despots, would be more effectually discharged; it would have the authority which is claimed for that dream of good men not yet come to pass, an International Congress; and the least of its victories would be to give to England a new millennium of beneficent power.

XVI.—STONEHENGE.

IT had been agreed between my friend Mr. C. and me, that before I left England, we should make an excursion together to Stonehenge, which neither of us had seen; and the project pleased my fancy with the double attraction of the monument and the companion. It seemed a bringing together of extreme points, to visit the oldest religious monument in Britain, in company with her latest thinker, and one whose influence may be traced in every contemporary book. I was glad to sun up a little my experiences, and to exchange a few reasonable words on the aspects of England, with a man on whose genius I set a very high value, and who had as much penetration, and as severe a theory of duty, as any person in it. On Friday, 7th July, we took the South Western Railway

through Hampshire to Salisbury, where we found a carriage to convey us to Amesbury. The fine weather and my friend's local knowledge of Hampshire, in which he is wont to spend a part of every summer, made the way short. There was much to say, too, of the travelling Americans, and their usual objects in London. I thought it natural, that they should give some time to works of art collected here, which they cannot find at home, and a little to scientific clubs and museums, which, at this moment, make London very attractive. But my philosopher was not contented. Art and 'high art' is a favourite target for his wit. "Yes, *Kunst* is a great delusion, and Goethe and Schiller wasted a great deal of good time on it;"—and he thinks he discovers that old Goethe found this out, and, in his later writings, changed his tone. As soon as men begin to talk of art, architecture, and antiquities, nothing good comes of it. He wishes to go through the British Museum in silence, and thinks a sincere man will see something, and say nothing. In these days, he thought, it would become an architect to consult only the grim necessity, and say, 'I can build you a coffin for such dead persons as you are, and for such dead purposes as you have, but you shall have no ornament.' For the science, he had, if possible, even less tolerance, and compared the savants of Somerset House to the boy who asked Confucius "how many stars in the sky?" Confucius replied, "he minded things near him:" then said the boy, "how many hairs are there in your eyebrows?" Confucius said, "he didn't know and didn't care."

Still speaking of the Americans, C. complained that they dislike the coldness and exclusiveness of the English, and run away to France, and go with their countrymen, and are amused, instead of manfully staying in London, and confronting Englishmen, and acquiring their culture, who really have much to teach them.

I told C. that I was easily dazzled, and was accustomed to concede readily all that an Englishman would ask; I saw everywhere in the country proofs of sense and spirit, and success of every sort: I like the people: they are as good as they are handsome; they have everything, and can do everything: but meantime, I surely know, that, as soon as I return to Massachusetts, I shall lapse at once into the feeling, which the geography of America inevitably inspires, that we play the game with immense advantage; that there and not here is the seat and centre of the British race; and that no skill or activity can long compete with the prodigious natural advantages of that country, in the hands of the same race; and that England, an old and exhausted island, must one day be contented, like other parents, to be strong only in her children.

But this was a proposition which no Englishman of whatever condition can easily entertain.

We left the train at Salisbury, and took a carriage to Amesbury, passing by Old Sarum, a bare, treeless hill, once containing the town which sent two members to Parliament—now, not a hut;—and, arriving at Amesbury, stopped at the George Inn. After dinner, we walked to Salisbury Plain. On the broad downs, under the gray sky, not a house was visible, nothing but Stonehenge, which looked like a group of brown dwarfs in the wide expanse—Stonehenge and the barrows—which rose like green bosses about the plain, and a few haystacks. On the top of a mountain, the old temple would not be more impressive. Far and wide a few shepherds with their flocks sprinkled the plain, and a bagman drove along the road. It looked as if the wide margin given in this crowded isle to this primeval temple were accorded by the veneration of the British race to the old egg out of which all their ecclesiastical structures and history had proceeded. Stonehenge is a circular colonnade with a diameter of a hundred feet, and enclosing a second and a third colonnade within. We walked round the stones, and clambered over them, to wont ourselves with their strange aspect and groupings, and found a nook sheltered from the wind among them, where C. lighted his cigar. It was pleasant to see, that, just this simplest of all simple structures—two upright stones and a lintel laid across—had long outstood all later churches, and all history, and were like what is most permanent on the face of the planet: these, and the barrows—mere mounds, (of which there are a hundred and sixty within a circle of three miles about Stonehenge,) like the same mound on the plain of Troy, which still makes good to the passing mariner on Hellespont, the vaunt of Homer and the fame of Achilles. Within the enclosure, grow buttercups, nettles, and, all around, wild thyme, daisy, meadowsweet, goldenrod, thistle, and the carpeting grass. Over us, larks were soaring and singing—as my friend said, “the larks which were hatched last year, and the wind which was hatched many thousand years ago.” We counted and measured by paces the biggest stones, and soon knew as much as any man can suddenly know of the inscrutable temple. There are ninety-four stones, and there were once probably one hundred and sixty. The temple is circular, and uncovered, and the situation fixed astronomically—the grand entrances here, and at Abury, being placed exactly north-east, “as all the gates of the old cavern temples are.” How came the stones here? for these *sarsens*, or Druidical sandstones, are not found in this neighbourhood. The *sacrificial stone*, as it is called, is the only one in all these blocks, that can resist the action of fire, and as I

read in the books, must have been brought one hundred and fifty miles.

On almost every stone we found the marks of the mineralogist's hammer and chisel. The nineteen smaller stones of the inner circle are of granite. I, who had just come from Professor Sedgwick's Cambridge Museum of megatheria and mastodons, was ready to maintain that some cleverer elephants or mylodonta had borne off and laid these rocks one on another. Only the good beasts must have known how to cut a well-wrought tenon and mortise, and to smooth the surface of some of the stones. The chief mystery is, that any mystery should have been allowed to settle on so remarkable a monument, in a country on which all the muses have kept their eyes now for eighteen hundred years. We are not yet too late to learn much more than is known of this structure. Some diligent Fellowes or Layard will arrive, stone by stone, at the whole history, by that exhaustive British sense and perseverance, so whimsical in its choice of objects, which leaves its own Stonehenge or Choir Gaur to the rabbits, whilst it opens pyramids, and uncovers Nineveh. Stonehenge, in virtue of the simplicity of its plan, and its good preservation, is as if new and recent; and, a thousand years hence, men will thank this age for the accurate history it will yet eliminate. We walked in and out, and took again and again a fresh look at the uncanny stones. The old sphinx put our petty differences of nationality out of sight. To these conscious stones we two pilgrims were alike known and near. We could equally well revere their old British meaning. My philosopher was subdued and gentle. In this quiet house of destiny, he happened to say, "I plant cypresses wherever I go, and if I am in search of pain, I cannot go wrong." The spot, the gray blocks, and their rude order, which refuses to be disposed of, suggested to him the flight of ages, and the succession of religions. The old times of England impress C. much: he reads little, he says, in these last years, but, "*Acta Sanctorum*," the fifty-three volumes of which are in the London Library. He finds all English history therein. He can see, as he reads the old saint of Iona sitting there, and writing, a man to men. The *Acta Sanctorum* show plainly that the men of those times believed in God, and in the immortality of the soul, as their abbeys and cathedrals testify: now, even the puritanism is all gone. London is pagan. He fancied that greater men had lived in England, than any of her writers; and, in fact, about the time when those writers appeared, the last of these were already gone. We left the mound in the twilight, with the design to return the next morning, and coming back two miles to our inn, we were met by little showers, and late as it was, men and women

were out attempting to protect their spread wind-rows. The grass grows rank and dark in the showery England. At the inn, there was only milk for one cup of tea. When we called for more, the girl brought us three drops. My friend was annoyed who stood for the credit of an English inn, and still more, the next morning, by the dog-cart, sole procurable vehicle, in which we were to be sent to Wilton. I engaged the local antiquary, Mr. Brown, to go with us to Stonehenge, on our way, and show us what he knew of the "astronomical" and "sacrificial" stones. I stood on the last, and he pointed to the upright, or rather, inclined stone, called the "astronomical," and bade me notice that its top ranged with the skyline. "Yes." Very well. Now, at the summer solstice, the sun rises exactly over the top of that stone, and, at the Druidical temple at Abury, there is also an astronomical stone, in the same relative positions.

In the silence of tradition, this one relation to science becomes an important clue; but we were content to leave the problem, with the rocks. Was this the "Giants' Dance" which Merlin brought from Killaraus, in Ireland, to be Uther Pendragon's monument to the British nobles whom Hengist slaughtered here, as Geoffrey of Monmouth relates? or was it a Roman work, as Inigo Jones explained to King James; or identical in design and style with the East Indian temples of the sun; as Davies in the *Celtic Researches* maintains? Of all the writers, Stukeley is the best. The heroic antiquary, charmed with the geometric perfections of his ruin, connects it with the oldest monuments and religion of the world, and with the courage of his tribe, does not stick to say, "the Deity who made the world by the scheme of Stonehenge." He finds that the *cursus** on Salisbury Plain stretches across the downs, like a line of latitude upon the globe, and the meridian line of Stonehenge passes exactly through the middle of this *cursus*. But here is the high point of the theory: the Druids had the magnet; laid their courses by it; their cardinal points in Stonehenge, Ambresbury, and elsewhere, which vary a little from true east and west, followed the variations of the compass. The Druids were Phœnicians. The name of the magnet is *lapis Heracleus*, and Hercules was the god of the Phœnicians. Hercules, in the legend, drew his bow at the sun, and the sun-god gave him a golden cup, with which he sailed over the ocean.

* Connected with Stonehenge are an avenue and a *cursus*. The avenue is a narrow row of raised earth, extending 594 yards in a straight line from the grand entrance, then dividing into two branches, which lead, severally, to a row of barrows; and to the *cursus*,—an artificially formed flat tract of ground. This is half a mile north-east from Stonehenge, bounded by banks and ditches 3036 yards long, by 110 broad.

What was this, but a compass-box? This cup or little boat, in which the magnet was made to float on water, and so show the north, was probably its first form, before it was suspended on a pin. But science was an *arcanum*, and, as Britain was a Phœnician secret, so they kept their compass a secret, and it was lost with the Tyrian commerce. The golden fleece, again, of Jason, was the compass—a bit of loadstone, easily supposed to be the only one in the world, and therefore naturally awakening the cupidity and ambition of the young heroes of a maritime nation to join in an expedition to obtain possession of this wise stone. Hence the fable that the ship *Argo* was loquacious and oracular. There is also some curious coincidence in the names. Apollodorus makes *Magnes* the son of *Æolus*, who married *Nais*. On hints like these, Stukeley builds again the grand colonnade into historic harmony, and computing backward by the known variations of the compass, bravely assigns the year 406 before Christ, for the date of the temple.

For the difficulty of handling and carrying stones of this size, the like is done in all cities, every day, with no other aid than horse power. I chanced to see a year ago men at work on the substructure of a house in Bowdoin Square, in Boston, swinging a block of granite of the size of the largest of the Stonehenge columns with an ordinary derrick. The men were common masons, with Paddies to help, nor did they think they were doing anything remarkable. I suppose, there were as good men a thousand years ago. And we wonder how Stonehenge was built and forgotten. After spending half an hour on the spot, we set forth in our dog-cart over the downs for Wilton, C. not suppressing some threats and evil omens on the proprietors, for keeping these broad plains a wretched sheep-walk, when so many thousands of English men were hungry and wanted labour. But I heard afterwards that it is not an economy to cultivate this land, which only yields one crop on being broken up and is then spoiled.

We came to Wilton and to Wilton Hall,—the renowned seat of the Earls of Pembroke, a house known to Shakespeare and Massinger, the frequent home of Sir Philip Sidney where he wrote the *Arcadia*; where he conversed with Lord Broœke, a man of deep thought, and a poet, who caused to be engraved on his tombstone, "Here lies Fulke Greville Lord Brooke, the friend of Sir Philip Sidney." It is now the property of the Earl of Pembroke, and the residence of his brother, Sidney Herbert, and is esteemed a noble specimen of the English manor-hall. My friend had a letter from Mr. Herbert to his housekeeper, and the house was shown. The state drawing-room is a double cube, 30 feet high, by 30 feet wide, by 60 feet

long: the adjoining room is a single cube of 30 feet every way. Although these apartments and the long library were full of good family portraits, Vandykes and other; and though there were some good pictures, and a quadrangle cloister full of antique and modern statuary,—to which C., catalogue in hand, did all too much justice,—yet the eye was still drawn to the windows, to a magnificent lawn, on which grew the finest cedars in England. I had not seen more charming grounds. We went out, and walked over the estate. We crossed a bridge built by Inigo Jones over a stream, of which the gardener did not know the name, (*Qu. Alph?*); watched the deer; climbed to the lonely sculptured summer-house, on a hill backed by a wood; came down into the Italian garden, and into a French pavilion, garnished with French busts; and so again, to the house, where we found a table laid for us with bread, meats, peaches, grapes, and wine.

On leaving Wilton House, we took the coach for Salisbury. The Cathedral, which was finished 600 years ago, has even a spruce and modern air, and its spire is the highest in England. I know not why, but I had been more struck with one of no fame at Coventry, which rises 300 feet from the ground, with the lightness of a mullein-plant, and not at all implicated with the church. Salisbury is now esteemed the culmination of the Gothic art in England, as the buttresses are fully unmasked, and honestly detailed from the sides of the pile. The interior of the Cathedral is obstructed by the organ in the middle, acting like a screen. I know not why in real architecture the hunger of the eye for length of line is so rarely gratified. The rule of art is that a colonnade is more beautiful the longer it is, and that *ad infinitum*. And the nave of a church is seldom so long that it need be divided by a screen.

We loitered in the church, outside the choir, whilst service was said. Whilst we listened to the organ, my friend remarked, the music is good, and yet not quite religious, but somewhat as if a monk were panting to some fine Queen of Heaven. C. was unwilling, and we did not ask to have the choir shown us, but returned to our inn, after seeing another old church of the place. We passed in the train Clarendon Park, but could see little but the edge of a wood, though C. had wished to pay closer attention to the birthplace of the Decrees of Clarendon. At Bishopstoke we stopped, and found Mr. H., who received us in his carriage, and took us to his house at Bishops Waltham.

On Sunday, we had much discourse on a very rainy day. My friends asked whether there were any Americans!—any with an American idea,—any theory of the right future of that country? Thus challenged, I bethought myself neither of

caucuses nor congress, neither of presidents nor of cabinet ministers, nor of such as would make of America another Europe. I thought only of the simpler, and purest minds; I said, 'Certainly yes; but those who hold it are fanatics of a dream which I should hardly care to relate to your English ears, to which it might be only ridiculous,—and yet it is the only true.' So I opened the dogma of no-government and non-resistance, and anticipated the objections and the fun, and procured a kind of hearing for it. I said, it is true that I have never seen in any country a man of sufficient valour to stand for this truth, and yet it is plain to me, that no less valour than this can command my respect. I can easily see the bankruptcy of the vulgar musket-worship,—though great men be musket-worshippers;—and 'tis certain, as God liveth, the gun that does not need another gun, the law of love and justice alone, can effect a clean revolution. I fancied that one or two of my anecdotes made some impression on C., and I insisted, that the manifest absurdity of the view to English feasibility could make no difference to a gentleman; that as to our secure tenure of our mutton-chop and spinage in London or in Boston, the soul might quote Talleyrand, "*Monsieur, je n'en vois pas la nécessité.*"* As I had thus taken in the conversation the saint's part, when dinner was announced, C. refused to go out before me,—“he was altogether too wicked.” I planted my back against the wall, and our host wittily rescued us from the dilemma, by saying, he was the wickedest, and would walk out first, then C. followed, and I went last.

On the way to Winchester, whither our host accompanied us in the afternoon, my friends asked many questions respecting American landscape, forests, houses,—my house, for example. It is not easy to answer these queries well. There I thought, in America, lies nature sleeping, over-growing, almost conscious, too much by half for man in the picture, and so giving a certain *tristesse*, like the rank vegetation of swamps and forests seen at night, steeped in dews and rains, which it loves; and on it man seems not able to make much impression. There, in that great sloven continent, in high Alleghany pastures, in the sea-wide, sky-skirted prairie, still sleeps and murmurs and hides the great mother, long since driven away from the trim hedge-rows and over-cultivated garden of England. And, in England, I am quite too sensible of this. Every one is on his good behaviour, and must be dressed for dinner at six. So I put off my friends with very inadequate details, as best I could.

Just before entering Winchester, we stopped at the Church of Saint Cross, and, after looking through the quaint antiquity,

* "*Mais, Monsieur, il faut que j'aille.*"

we demanded a piece of bread and a draught of beer, which the founder, Henry de Blois, in 1136, commanded should be given to everyone who should ask it at the gate. We had both, from the old couple who take care of the church. Some twenty people, every day, they said, make the same demand. This hospitality of seven hundred years' standing did not hinder C. from pronouncing a malediction on the priest who receives 2,000*l.* a year, that were meant for the poor, and spends a pittance on this small beer and crumbs.

In the Cathedral, I was gratified at least by the ample dimensions. The length of line exceeds that of any other English church; being 556 feet by 250 in breadth of transept. I think I prefer this church to all I have seen, except Westminster and York. Here was Canute buried, and here Alfred the Great was crowned and buried, and here the Saxon kings; and, later, in his own church, William of Wykeham. It is very old: part of the crypt into which we went down and saw the Saxon and Norman arches of the old church on which the present stands, was built fourteen or fifteen hundred years ago. Sharon Turner says, "Alfred was buried at Winchester, in the Abbey he had founded there, but his remains were removed by Henry I. to the new Abbey in the meadows at Hyde, on the northern quarter of the city, and laid under the high altar. The building was destroyed at the Reformation, and what is left of Alfred's body now lies covered by modern buildings, or buried in the ruins of the old."* William of Wykeham's shrine tomb was unlocked for us, and C. took hold of the recumbent statue's marble hands, and patted them affectionately, for he rightly values the brave man who built Windsor, and this Cathedral, and the School here, and New College at Oxford. But it was growing late in the afternoon. Slowly we left the old house, and parting with our host, we took the train for London.

XVII.—PERSONAL.

IN these comments on an old journey now revised after seven busy years have much changed men and things in England, I have abstained from reference to persons, except in the last chapter, and in one or two cases where the fame of the parties seemed to have given the public a property in all that concerned them. I must further allow myself a few notices, if only as an

* History of the Anglo-Saxons, I. 509.

acknowledgment of debts that cannot be paid. My journeys were cheered by so much kindness from new friends, that my impression of the island is bright with agreeable memories both of public societies and of households: and, what is nowhere better found than in England, a cultivated person fitly surrounded by a happy home, "with honour, love, obedience, troops of friends," is of all institutions the best. At the landing in Liverpool, I found my Manchester correspondent awaiting me, a gentleman whose kind reception was followed by a train of friendly and effective attentions which never rested whilst I remained in the country. A man of sense and of letters, the editor of a powerful local journal, he added to solid virtues an infinite sweetness and *bonhomie*. There seemed a pool of honey about his heart which lubricated all his speech and action with fine jets of mead. An equal good fortune attended many later accidents of my journey, until the sincerity of English kindness ceased to surprise. My visit fell in the fortunate days when Mr. Bancroft was the American Minister in London, and at his house, or through his good offices, I had easy access to excellent persons and to privileged places. At the house of Mr. Carlyle, I met persons eminent in society and in letters. The privileges of the Athenæum and of the Reform Clubs were hospitably opened to me, and I found much advantage in the circles of the "Geological," the "Antiquarian," and the "Royal Societies." Every day in London gave me new opportunities of meeting men and women who give splendour to society. I saw Rogers, Hallam, Macaulay, Milnes, Milman, Barry Cornwall, Dickens, Thackeray, Tennyson, Leigh Hunt, Disraeli, Helps, Wilkinson, Bailey, Kenyon, and Forster: the younger poets, Clough, Arnold, and Patmore; and, among the men of science, Robert Brown, Owen, Sedgwick, Faraday, Buckland, Lyell, De la Beche, Hooker, Carpenter, Babbage, and Edward Forbes. It was my privilege also to converse with Miss Baillie, with Lady Morgan, with Mrs. Jameson, and Mrs. Somerville. A finer hospitality made many private houses not less known and dear. It is not in distinguished circles that wisdom and elevated characters are usually found, or, if found, not confined thereto; and my recollections of the best hours go back to private conversations in different parts of the kingdom, with persons little known. Nor am I insensible to the courtesy which frankly opened to me some noble mansions, if I do not adorn my page with their names. Among the privileges of London, I recall with pleasure two or three signal days, one at Kew, where Sir William Hooker showed me all the riches of the vast botanic garden; one at the Museum, where Sir Charles Fellows explained in detail the history of his Ionic trophy-monument;

and still another, on which Mr. Owen accompanied my countryman Mr. H. and myself through the Hunterian Museum.

The like frank hospitality, bent on real service, I found among the great and the humble, wherever I went; in Birmingham, in Oxford, in Leicester, in Nottingham, in Sheffield, in Manchester, in Liverpool. At Edinburgh, through the kindness of Dr. Samuel Brown, I made the acquaintance of De Quincey, of Lord Jeffrey, of Wilson, of Mrs. Crowe, of the Messrs. Chambers, and of a man of high character and genius, the short-lived painter, David Scott.

At Ambleside, in March, 1848, I was for a couple of days the guest of Miss Martineau, then newly returned from her Egyptian tour. On Sunday afternoon, I accompanied her to Rydal Mount. And as I have recorded a visit to Wordsworth, many years before, I must not forget this second interview. We found Mr. Wordsworth asleep on the sofa. He was at first silent and indisposed, as an old man suddenly waked, before he had ended his nap; but soon became full of talk on the French news. He was nationally bitter on the French: bitter on Scotchmen, too. No Scotchman, he said, can write English. He detailed the two models, on one or the other of which all the sentences of the historian Robertson are framed. Nor could Jeffrey, nor the Edinburgh Reviewers write English, nor can * * *, who is a pest to the English tongue. Incidentally he added, Gibbon cannot write English. The Edinburgh Review wrote what would tell and what would sell. It had, however, changed the tone of its literary criticism from the time when a certain letter was written to the editor by Coleridge. Mrs. W. had the editor's answer in her possession. Tennyson he thinks a right poetic genius, though with some affectation. He had thought an elder brother of Tennyson at first the better poet, but must now reckon Alfred the true one. . . . In speaking of I know not what style, he said, "to be sure, it was the manner, but then you know the matter always comes out of the manner." . . . He thought Rio Janeiro the best place in the world for a great capital city. . . . We talked of English national character. I told him it was not creditable that no one in all the country knew anything of Thomas Taylor, the Platonist, whilst in every American library his translations are found. I said, if Plato's Republic were published in England as a new book to-day, do you think it would find any readers? He confessed it would not: "and yet," he added after a pause, with that complacency which never deserts a true-born Englishman, "and yet we have embodied it all."

His opinions of French, English, Irish, and Scotch, seemed rashly formulized from little anecdotes of what had befallen himself, and members of his family, in a diligence or stage-coach. His face sometimes lighted up, but his conversation

was not marked by special force or elevation. Yet perhaps it is a high compliment to the cultivation of the English generally, when we find such a man not distinguished. He had a healthy look, with a weather-beaten face, his face corrugated, especially the large nose.

Miss Martineau, who lived near him, praised him to me not for his poetry, but for thrift and economy; for having afforded to his country neighbours an example of a modest household, where comfort and culture were secured without any display. She said, that, in his early house-keeping at the cottage where he first lived, he was accustomed to offer his friends bread and plainest fare: if they wanted any thing more, they must pay him for their board. It was the rule of the house. I replied, that it evinced English pluck more than any anecdote I knew. A gentleman in the neighbourhood told the story of Walter Scott's staying once for a week with Wordsworth, and slipping out every day under pretence of a walk, to the Swan Inn, for a cold cut and porter; and one day passing with Wordsworth the inn, he was betrayed by the landlord's asking him if he had come for his porter. Of course, this trait would have another look in London, and there you will hear from different literary men, that Wordsworth had no personal friend, that he was not amiable, that he was parsimonious, &c. Landor, always generous, says that he never praised anybody. A gentleman in London showed me a watch that once belonged to Milton, whose initials are engraved on its face. He said, he once showed this to Wordsworth, who took it in one hand, then drew out his own watch, and held it up with the other, before the company, but no one making the expected remark, he put back his own in silence. I do not attach much importance to the disparagement of Wordsworth among London scholars. Who reads him well will know, that in following the strong bent of his genius, he was careless of the many, careless also of the few, self-assured that he should "create the taste by which he is to be enjoyed." He lived long enough to witness the revolution he had wrought, and "to see what he foresaw." There are torpid places in his mind, there is something hard and sterile in his poetry, want of grace and variety, want of due catholicity and cosmopolitan scope: he had conformities to English politics and traditions; he had egotistic puerilities in the choice and treatment of his subjects; but let us say of him, that, alone in his time he treated the human mind well, and with an absolute trust. His adherence to his poetic creed rested on real inspirations. The Ode on Immortality is the high-water-mark which the intellect has reached in this age. New means were employed, and new realms added to the empire of the muse, by his courage.

XVIII.—RESULT.

ENGLAND is the best of actual nations. It is no ideal framework, it is an old pile built in different ages, with repairs, additions, and makeshifts; but you see the poor best you have got. London is the epitome of our times, and the Rome of to-day. Broad-fronted broad-bottomed Teutons, they stand in solid phalanx foursquare to the points of compass: they constitute the modern world, they have earned their vantage-ground, and held it through ages of adverse possession. They are well marked and differing from other leading races. England is tender-hearted. Rome was not. England is not so public in its bias; private life is its place of honour. Truth in private life, untruth in public, marks these home-loving men. Their political conduct is not decided by general views, but by internal intrigues and personal and family interest. They cannot readily see beyond England. The history of Rome and Greece, when written by their scholars, degenerates into English party pamphlets. They cannot see beyond England, nor in England can they transcend the interests of the governing classes. "English principles" mean a primary regard to the interests of property. England, Scotland, and Ireland combine to check the colonies. England and Scotland combine to check Irish manufactures and trade. England rallies at home to check Scotland. In England, the strong classes check the weaker. In the home population of near thirty millions, there are but one million voters. The Church punishes dissent, punishes education. Down to a late day, marriages performed by dissenters were illegal. A bitter class-legislation gives power to those who are rich enough to buy a law. The game-laws are a proverb of oppression. Pauperism incrusts and clogs the state, and in hard times becomes hideous. In bad seasons, the porridge was diluted. Multitudes lived miserably by shell-fish and sea-ware. In cities, the children are trained to beg, until they shall be old enough to rob. Men and women were convicted of poisoning scores of children for burial-fees. In Irish districts, men deteriorated in size and shape, the nose sunk, the gums were exposed, with diminished brain and brutal form. During the Australian emigration, multitudes were rejected by the commissioners as being too emaciated for useful colonists. During the Russian war, few of those that offered as recruits were found up to the medical standard, though it had been reduced.

The foreign policy of England, though ambitious and lavish

of money, has not often been generous or just. It has a principal regard to the interest of trade, checked, however, by the aristocratic bias of the ambassador, which usually puts him in sympathy with the continental Courts. It sanctioned the partition of Poland, it betrayed Genoa, Sicily, Parga, Greece, Turkey, Rome, and Hungary.

Some public regards they have. They have abolished slavery in the West Indies, and put an end to human sacrifices in the East. At home they have a certain statute hospitality: England keeps open doors, as a trading country must, to all nations. It is one of their fixed ideas, and wrathfully supported by their laws in unbroken sequence for a thousand years. In *Magna Charta* it was ordained, that all "merchants shall have safe and secure conduct to go out and come into England, and to stay there, and to pass as well by land as by water, to buy and sell by the ancient allowed customs, without any evil toll, except in time of war, or when they shall be of any nation at war with us." It is a statute and obliged hospitality, and peremptorily maintained. But this shop-rule had one magnificent effect. It extends its cold unalterable courtesy to political exiles of every opinion, and is a fact which might give additional light to that portion of the planet seen from the farthest star. But this perfunctory hospitality puts no sweetness into their unaccommodating manners, no check on that puissant nationality which makes their existence incompatible with all that is not English.

What we must say about a nation is a superficial dealing with symptoms. We cannot go deep enough into the biography of the spirit who never throws himself entire into one hero, but delegates his energy in parts or spasms to vicious and defective individuals. But the wealth of the source is seen in the plenitude of English nature. What variety of power and talent; what facility and plenteousness of knight-hood, lordship, ladyship, royalty, loyalty; what a proud chivalry is indicated in "Collins's Peerage," through eight hundred years! What dignity resting on what reality and stoutness! What courage in war, what sinew in labour, what cunning workmen, what inventors and engineers, what seamen and pilots, what clerks and scholars! No one man and no few men can represent them. It is a people of myriad personalities. Their manyheadedness is owing to the advantageous position of the middle class, who are always the source of letters and science. Hence the vast plenty of their æsthetic production. As they are many-headed, so they are many-nationed: their colonization annexes archipelagoes and continents, and their speech seems destined to be the universal language of men. I have noted the reserve of power in the

English temperament. In the island, they never let out all the length of all the reins, there is no Berserkir rage, no abandonment or ecstasy of will or intellect, like that of the Arabs in the time of Mahomet, or like that which intoxicated France in 1789. But who would see the uncoiling of that tremendous spring, the explosion of their well-husbanded forces, must follow the swarms which, pouring now for two hundred years from the British islands, have sailed, and rode, and traded, and planted, through all climates, mainly following the belt of empire, the temperate zones, carrying the Saxon seed, with its instinct for liberty and law, for arts and for thought—acquiring under some skies a more electric energy than the native air allows—to the conquest of the globe. Their colonial policy, obeying the necessities of a vast empire, has become liberal. Canada and Australia have been contented with substantial independence. They are expiating the wrongs of India, by benefits; first, in works for the irrigation of the peninsula, and roads and telegraphs; and secondly, in the instruction of the people, to qualify them for self-government, when the British power shall be finally called home.

Their mind is in a state of arrested development—a divine cripple, like Vulcan; a blind *savant*, like Huber and Sunderson. They do not occupy themselves on matters of general and lasting import, but on a corporeal civilization, on goods that perish in the using. But they read with good intent, and what they learn they incarnate. The English mind turns every abstraction it can receive into a portable utensil, or a working institution. Such is their tenacity, and such their practical turn, that they hold all they gain. Hence we say, that only the English race can be trusted with freedom—freedom which is double-edged and dangerous to any but the wise and robust. The English designate the kingdoms emulous of free institutions, as the sentimental nations. Their culture is not an outside varnish, but is thorough and secular in families and the race. They are oppressive with their temperament, and all the more that they are refined. I have sometimes seen them walk with my countrymen when I was forced to allow them every advantage, and their companions seemed bags of bones.

There is cramp limitation in their habit of thought, sleepy routine, and a tortoise's instinct to hold hard to the ground with his claws, lest he should be thrown on his back. There is a drag of inertia which resists reform in every shape;—law-reform, army-reform, extension of suffrage, Jewish franchise, Catholic emancipation—the abolition of slavery, of imprisonment, penal code, and entails. They praise this drag, under the formula, that it is the excellence of the British constitu-

tion, that no law can anticipate the public opinion. These poor tortoises must hold hard, for they feel no wings sprouting at their shoulders. Yet somewhat divine warmth at their heart, and waits a happier hour. It hides in their sturdy will. "Will," said the old philosophy, "is the measure of power," and personality is the token of this race. *Quid vult valde vult.* What they do they do with a will. You cannot account for their success by their Christianity, commerce, charter, common law, Parliament, or letters, but by the contumacious sharp-tongued energy of English *naturel*, with a poise impossible to disturb, which makes all these its instruments. They are slow and reticent, and are like a dull good horse which lets every nag pass him, but with whip and spur will run down every racer in the field. They are right in their feeling, though wrong in their speculation.

The feudal system survives in the steep inequality of property and privilege, in the limited franchise, in the social barriers which confine patronage and promotion to a caste, and still more in the submissive ideas pervading these people. The fagging of the schools is repeated in the social classes. An Englishman shows no mercy to those below him in the social scale, as he looks for none from those above him: any forbearance from his superiors surprises him, and they suffer in his good opinion. But the feudal system can be seen with less pain on large historical grounds. It was pleaded in mitigation of the rotten borough, that it worked well, that substantial justice was done. Fox, Burke, Pitt, Erskine, Wilberforce, Sheridan, Romilly, or whatever national man, were by this means sent to Parliament, when their return by large constituencies would have been doubtful. So now we say, that the right measures of England are the men it bred; that it has yielded more able men in five hundred years than any other nation; and, though we must not play Providence, and balance the chances of producing ten great men against the comfort of ten thousand mean men, yet retrospectively we may strike the balance, and prefer one Alfred, one Shakespeare, one Milton, one Sidney, one Raleigh, one Wellington, to a million foolish democrats.

The American system is more democratic, more humane; yet the American people do not yield better or more able men, or more inventions or books or benefits, than the English. Congress is not wiser or better than Parliament. France has abolished its suffocating old *régime*, but is not recently marked by any more wisdom or virtue.

The power of performance has not been exceeded—the creation of value. The English have given importance to individuals, a principal end and fruit of every society. Every

man is allowed and encouraged to be what he is, and is guarded in the indulgence of his whim. "Magna Charta," said Rushworth, "is such a fellow that he will have no sovereign." By this general activity, and by this sacredness of individuals, they have in seven hundred years evolved the principles of freedom. It is the land of patriots, martyrs, sages, and bards, and if the ocean out of which it emerged should wash it away, it will be remembered as an island famous for immortal laws, for the announcements of original right which make the stone tables of liberty.

XIX.—SPEECH AT MANCHESTER.

A FEW days after my arrival at Manchester, in November, 1847, the Manchester Athenæum gave its annual banquet in the Free-Trade Hall. With other guests, I was invited to be present, and to address the company. In looking over recently a newspaper report of my remarks, I incline to reprint it, as fitly expressing the feeling with which I entered England, and which agrees well enough with the more deliberate results of better acquaintance recorded in the foregoing pages. Sir Archibald Alison, the historian, presided, and opened the meeting with a speech. He was followed by Mr. Cobden, Lord Brackley, and others, among whom was Mr. Cruikshank, one of the contributors to "Punch." Mr. Dickens's letter of apology for his absence was read. Mr. Jerrold, who had been announced, did not appear. On being introduced to the meeting I said—

Mr. Chairman and Gentlemen: It is pleasant to me to meet this great and brilliant company, and doubly pleasant to see the faces of so many distinguished persons on this platform. But I have known all these persons already. When I was at home, they were as near to me as they are to you. The arguments of the League and its leader are known to all the friends of free trade. The guileless and genius, the political, the social, the parietal wit of "Punch" go duly every fortnight to every boy and girl in Boston and New York. Sir, when I came to sea, I found the "History of Europe" on the ship's cabin table, the property of the captain;—a sort of programme or play-bill to tell the seafaring New Englander what he shall find on his landing here. And as for Dombey, sir, there is no land where paper exists to print on, where it is not found; no man who can read, that does not read it, and, if he cannot, he finds some charitable pair of eyes that can, and hears it.

* By Sir A. Alison.

But these things are not for me to say; these compliments, though true, would better come from one who felt and understood these merits more. I am not here to exchange civilities with you, but rather to speak of that which I am sure interests these gentlemen more than their own praises; of that which is good in holidays and working-days the same in one century and in another century. That which lures a solitary American in the woods with the wish to see England, is the moral peculiarity of the Saxon race—its commanding sense of right and wrong—the love and devotion to that—this is the imperial trait, which arms them with the sceptre of the globe. It is this which lies at the foundation of that aristocratic character, which certainly wanders into strange vagaries, so that its origin is often lost sight of, but which, if it should lose this, would find itself paralyzed; and in trade, and in the mechanic's shop, gives that honesty in performance, that thoroughness and solidity of work, which is a national characteristic. This conscience is one element, and the other is that loyal adhesion, that habit of friendship, that homage of man to man, running through all classes—the electing of worthy persons to a certain fraternity, to acts of kindness and warm and staunch support, from year to year, from youth to age—which is alike lovely and honourable to those who render and those who receive it;—which stands in strong contrast with the superficial attachments of other races, their excessive courtesy and short-lived connection.

You will think me very pedantic, gentlemen, but holiday though it be, I have not the smallest interest in any holiday, except as it celebrates real and not pretended joys; and I think it just, in this time of gloom and commercial disaster, of affliction and beggary in these districts, that, on these very accounts I speak of, you should not fail to keep your literary anniversary. I seem to hear you say, that, for all that is come and gone yet, we will not reduce by one chaplet or one oak leaf the braveries of our annual feast. For I must tell you, I was given to understand in my childhood, that the British island from which my forefathers came, was no lotus-garden, no paradise of serene sky and roses and music and merriment all the year round; no, but a cold foggy mournful country, where nothing grew well in the open air, but robust men and virtuous women, and these of a wonderful fibre and endurance, that their best parts were slowly revealed; their virtues did not come out until they quarrelled: they did not strike twelve the first time; good lovers, good haters, and you could know little about them till you had seen them long, and little good of them till you had seen them in action; that in prosperity they were moody and dumpish, but in adversity they were

grand. Is it not true, sir, that the wise ancients did not praise the ship parting with flying colours from the port, but only that brave sailer which came back with torn sheets and battered sides, stript of her banners, but having ridden out the storm? And so, gentlemen, I feel in regard to this aged England, with the possessions, honours and trophies, and also with the infirmities, of a thousand years gathering around her, irretrievably committed as she now is to many old customs which cannot be suddenly changed; pressed upon by the transitions of trade, and new and all incalculable modes, fabrics, arts, machines, and competing populations—I see her not dispirited, not weak, but well remembering that she has seen dark days before;—indeed with a kind of instinct that she sees a little better in a cloudy day, and that in storm of battle and calamity, she has a secret vigour and a pulse like a cannon. I see her in her old age, not decrepit, but young, and still daring to believe in her power of endurance and expansion. Seeing this, I say, All hail! mother of nations, mother of heroes, with strength still equal to the time; still wise to entertain and swift to execute the policy which the mind and heart of mankind requires in the present hour, and thus only hospitable to the foreigner, and truly a home to the thoughtful and generous who are born in the soil. So be it! so let it be! If it be not so, if the courage of England goes with the chances of a commercial crisis, I will go back to the capes of Massachusetts, and my own Indian stream, and say to my countrymen, the old race are all gone, and the elasticity and hope of mankind must henceforth remain on the Alleghany ranges, or nowhere.

NATURE.

A subtle chain of countless rings
 The next unto the farthest brings;
 The eye reads omens where it goes,
 And speaks all languages the rose;
 And, striving to be man, the worm
 Mounts through all the spires of form.

INTRODUCTION.

OUR age is retrospective. It builds the sepulchres of the fathers. It writes biographies, histories, and criticism. The foregoing generations beheld God and nature face to face; we, through their eyes. Why should not we also enjoy an original relation to the universe? Why should not we have a poetry and philosophy of insight and not of tradition, and a religion by revelation to us, and not the history of theirs? Embosomed for a season in nature, whose floods of life stream around and through us, and invite us by the powers they supply, to action proportioned to nature, why should we grope among the dry bones of the past, or put the living generation into masquerade out of its faded wardrobe? The sun shines to-day also. There is more wool and flax in the fields. There are new lands, new men, new thoughts. Let us demand our own works and laws and worship.

Undoubtedly we have no questions to ask which are unanswerable. We must trust the perfection of the creation so far, as to believe that whatever curiosity the order of things has awakened in our minds, the order of things can satisfy. Every man's condition is a solution in hieroglyphic to those inquiries he would put. He acts it as life, before he apprehends it as truth. In like manner, nature is already, in its forms and tendencies, describing its own design. Let us interrogate the great apparition, that shines so peacefully around us. Let us inquire, to what end is nature?

All science has one aim, namely, to find a theory of nature. We have theories of races and of functions, but scarcely yet a remote approach to an idea of creation. We are now so far from the road to truth, that religious teachers dispute and hate each other, and speculative men are esteemed unsound

and frivolous. But to a sound judgment, the most abstract truth is the most practical. Whenever a true theory appears, it will be its own evidence. Its test is, that it will explain all phenomena. Now many are thought not only unexplained but inexplicable; as language, sleep, madness, dreams, beasts, sex.

Philosophically considered, the universe is composed of Nature and the Soul. Strictly speaking, therefore, all that is separate from us, all which Philosophy distinguishes as the NOT ME, that is, both nature and art, all other men and my own body, must be ranked under this name, NATURE. In enumerating the values of nature and casting up their sum, I shall use the word in both senses—in its common and in its philosophical import. In inquiries so general as our present one, the inaccuracy is not material; no confusion of thought will occur. *Nature*, in the common sense, refers to essences unchanged by man; space, the air, the river, the leaf. *Art* is applied to the mixture of his will with the same things, as in a house, a canal, a statue, a picture. But his operations taken together are so insignificant, a little chipping, baking, patching, and washing, that in an impression so grand as that of the world on the human mind, they do not vary the result.

I.—NATURE.

TO go into solitude, a man needs to retire as much from his chamber as from society. I am not solitary whilst I read and write, though nobody is with me. But if a man would be alone, let him look at the stars. The rays that come from those heavenly worlds, will separate between him and what he touches. One might think the atmosphere was made transparent with this design, to give man, in the heavenly bodies, the perpetual presence of the sublime. Seen in the streets of cities, how great they are! If the stars should appear one night in a thousand years, how would men believe and adore; and preserve for many generations the remembrance of the city of God which had been shown! But every night come out these envoys of beauty, and light the universe with their admonishing smile.

The stars awaken a certain reverence, because, though always present, they are inaccessible; but all natural objects make a kindred impression, when the mind is open to their influence. Nature never wears a mean appearance. Neither does the wisest man extort her secret, and lose his curiosity by finding out all her perfection. Nature never became a toy to

a wise spirit. The flowers, the animals, the mountains, reflected the wisdom of his best hour, as much as they had delighted the simplicity of his childhood.

When we speak of nature in this manner, we have a distinct but most poetical sense in the mind. We mean the integrity of impression made by manifold natural objects. It is this which distinguishes the stick of timber of the wood-cutter, from the tree of the poet. The charming landscape which I saw this morning, is indubitably made up of some twenty or thirty farms. Miller owns this field, Locke that, and Manning the woodland beyond. But none of them owns the landscape. There is a property in the horizon which no man has but he whose eye can integrate all the parts, that is, the poet. This is the best part of these men's farms, yet to this their warranty-deeds give no title.

To speak truly, few adult persons can see nature. Most persons do not see the sun. At least they have a very superficial seeing. The sun illuminates only the eye of the man, but shines into the eye and the heart of the child. The lover of nature is he whose inward and outward senses are still truly adjusted to each other; who has retained the spirit of infancy even into the era of manhood. His intercourse with heaven and earth becomes part of his daily food. In the presence of nature, a wild delight runs through the man, in spite of real sorrows. Nature says,—he is my creature, and maugre all his impertinent griefs, he shall be glad with me. Not the sun or the summer alone, but every hour and season yields its tribute of delight: for every hour and change corresponds to and authorizes a different state of the mind, from breathless noon to grimmiest midnight. Nature is a setting that fits equally well a comic or a mourning piece. In good health, the air is a cordial of incredible virtue. Crossing a bare common, in snow puddles, at twilight, under a clouded sky, without having in my thoughts any occurrence of special good fortune, I have enjoyed a perfect exhilaration. I am glad to the brink of fear. In the woods too, a man casts off his years, as the snake his slough, and at what period soever of life, is always a child. In the woods is perpetual youth. Within these plantations of God, a decorum and sanctity reign, a perennial festival is dressed, and the guest sees not how he should tire of them in a thousand years. In the woods, we return to reason and faith. There I feel that nothing can befall me in life—no disgrace, no calamity (leaving me my eyes), which nature cannot repair. Standing on the bare ground—my head bathed by the blithe air, and uplifted into infinite space—all mean egotism vanishes. I become a transparent eye-ball; I am nothing; I see all; the currents of the Universal Being circulate through me; I am

part or parcel of God. The name of the nearest friend sounds then foreign and accidental: to be brothers, to be acquaintances—master or servant, is then a trifle and a disturbance. I am the lover of uncontained and immortal beauty. In the wilderness, I find something more dear and connate than in streets or villages. In the tranquil landscape, and especially in the distant line of the horizon, man beholds somewhat as beautiful as his own nature.

The greatest delight which the fields and woods minister, is the suggestion of an occult relation between man and the vegetable. I am not alone and unacknowledged. They nod to me, and I to them. The waving of the boughs in the storm, is new to me and old. It takes me by surprise, and yet is not unknown. Its effect is like that of a higher thought or a better emotion coming over me, when I deemed I was thinking justly or doing right.

Yet it is certain that the power to produce this delight, does not reside in nature, but in man, or in harmony of both. It is necessary to use these pleasures with great temperance. For, nature is not always tricked in holiday attire, but the same scene which yesterday breathed perfume and glittered as for the frolic of the nymphs, is overspread with melancholy to-day. Nature always wears the colours of the spirit. To a man labouring under calamity, the heat of his own fire hath sadness in it. Then, there is a kind of contempt of the landscape felt by him who has just lost by death a dear friend. The sky is less grand as it shuts down over less worth in the population.

II.—COMMODITY.

WHOEVER considers the final cause of the world, will discern a multitude of uses that enter as parts into that result. They all admit of being thrown into one of the following classes: Commodity; Beauty; Language; and Discipline.

Under the general name of commodity, I rank all those advantages which our senses owe to nature. This, of course, is a benefit which is temporary and mediate, not ultimate, like its service to the soul. Yet, although low, it is perfect in its kind, and is the only use of nature which all men apprehend. The misery of man appears like childish petulance, when we explore the steady and prodigal provision that has been made for his support and delight on this green ball which floats him through the heavens. What angels invented these splendid ornaments, these rich conveniences, this ocean

of air above, this ocean of water beneath, this firmament of earth between? this zodiac of lights, this tent of dropping clouds, this striped coat of climates, this fourfold year? Beasts, fire, water, stones, and corn, serve him. The field is at once his floor, his work-yard, his play-ground, his garden, and his bed.

"More servants wait on man
Than he'll take notice of."——

Nature, in its ministry to man, is not only the material, but is also the process and the result. All the parts incessantly work into each other's hands for the profit of man. The wind sows the seed; the sun evaporates the sea; the wind blows the vapour to the field; the ice, on the other side of the planet, condenses rain on this; the rain feeds the plant; the plant feeds the animal: and thus the endless circulations of the divine charity nourish man.

The useful arts are reproductions or new combinations by the wit of man, of the same natural benefactors. He no longer waits for favouring gales, but by means of steam, he realizes the fable of *Æolus's* bag, and carries the two and thirty winds in the boiler of his boat. To diminish friction, he paves the road with iron bars, and, mounting a coach with a ship-load of men, animals, and merchandise behind him, he darts through the country, from town to town, like an eagle or a swallow through the air. By the aggregate of these aids, how is the face of the world changed, from the era of Noah to that of Napoleon! The private poor man hath cities, ships, canals, bridges, built for him. He goes to the post-office, and the human race run on his errands; to the book-shop, and the human race read and write of all that happens, for him; to the court-house, and nations repair his wrongs. He sets his house upon the road, and the human race go forth every morning, and shovel out the snow, and cut a path for him.

But there is no need of specifying particulars in this class of uses. The catalogue is endless, and the examples so obvious, that I shall leave them to the reader's reflection, with the general remark, that this mercenary benefit is one which has respect to a farther good. A man is fed, not that he may be fed, but that he may work.

III.—BEAUTY.

A NOBLER want of man is served by nature, namely, the love of Beauty.

The ancient Greeks called the world *κοσμος*, beauty. Such is the constitution of all things, or such the plastic power of the human eye, that the primary forms, as the sky, the mountain, the tree, the animal, give us a delight *in and for themselves*; a pleasure arising from outline, colour, motion, and grouping. This seems partly owing to the eye itself. The eye is the best of artists. By the mutual action of its structure and of the laws of light, perspective is produced, which integrates every mass of objects, of what character soever, into a well-coloured and shaded globe, so that where the particular objects are mean and unaffecting, the landscape which they compose is round and symmetrical. And as the eye is the best composer, so light is the first of painters. There is no object so foul that intense light will not make beautiful. And the stimulus it affords to the sense, and a sort of infinitude which it hath, like space and time, make all matter gay. Even the corpse has its own beauty. But besides this general grace diffused over nature, almost all the individual forms are agreeable to the eye, as is proved by our endless imitations of some of them, as the acorn, the grape, the pine-cone, the wheat-ear, the egg, the wings and forms of most birds, the lion's claw, the serpent, the butterfly, sea-shells, flames, clouds, buds, leaves, and the forms of many trees, as the palm.

For better consideration, we may distribute the aspects of Beauty in a threefold manner.

I. First, the simple perception of natural forms is a delight. The influence of the forms and actions in nature is so needful to man, that, in its lowest functions, it seems to lie on the confines of commodity and beauty. To the body and mind which have been cramped by noxious work or company, nature is medicinal and restores their tone. The tradesman, the attorney, comes out of the din and craft of the street, and sees the sky and the woods, and is a man again. In their eternal calm he finds himself. The health of the eye seems to demand a horizon. We are never tired, so long as we can see far enough.

But in other hours, Nature satisfies by its loveliness, and without any mixture of corporeal benefit. I see the spectacle of morning from the hill-top over against my house, from daybreak to sunrise, with emotions which an angel might share. The long slender bars of cloud float like fishes in the

sea of crimson light. From the earth, as a shore, I look out into that silent sea. I seem to partake its rapid transformations: the active enchantment reaches my dust, and I dilate and conspire with the morning wind. How does Nature deify us with a few and cheap elements! Give me health and a day, and I will make the pomp of emperors ridiculous. The dawn is my Assyria; the sunset and moonrise my Paphos, and unimaginable realms of faerie; broad noon shall be my England of the senses and the understanding; the night shall be my Germany of mystic philosophy and dreams.

Not less excellent, except for our less susceptibility in the afternoon, was the charm, last evening, of a January sunset. The western clouds divided and subdivided themselves into pink flakes modulated with tints of unspeakable softness; and the air had so much life and sweetness, that it was a pain to come within doors. What was it that nature would say? Was there no meaning in the live repose of the valley behind the mill, and which Homer or Shakespeare could not re-form for me in words? The leafless trees become spires of flame in the sunset, with the blue east for their back-ground, and the stars of the dead calices of flowers, and every withered stem and stubble rimed with frost, contribute something to the mute music.

The inhabitants of cities suppose that the country landscape is pleasant only half the year. I please myself with the graces of the winter scenery, and believe that we are as much touched by it as by the genial influences of summer. To the attentive eye, each moment of the year has its own beauty; and in the same field, it beholds, every hour, a picture which was never seen before, and which shall never be seen again. The heavens change every moment, and reflect their glory or gloom on the plains beneath. The state of the crop in the surrounding farms alters the expression of the earth from week to week. The succession of native plants in the pastures and roadsides, which makes the silent clock by which time tells the summer hours, will make even the divisions of the day sensible to a keen observer. The tribes of birds and insects, like the plants, punctual to their time, follow each other, and the year has room for all. By water-courses the variety is greater. In July, the blue pontederia or pickerel-weed blooms in large beds in the shallow parts of our pleasant river, and swarms with yellow butterflies in continual motion. Art cannot rival this pomp of purple and gold. Indeed the river is a perpetual gala, and boasts each month a new ornament.

But this beauty of Nature which is seen and felt as beauty, is the least part. The shows of day, the dewy morning, the rainbow, mountains, orchards in blossom, stars, moonlight, shadows in still water and the like, if too eagerly hunted,

become shows merely, and mock us with their unreality. Go out of the house to see the moon, and 'tis mere tinsel; it will not please as when its light shines upon your necessary journey. The beauty that shimmers in the yellow afternoons of October, who ever could clutch it? Go forth to find it, and it is gone; 'tis only a mirage as you look from the windows of diligence.

2. The presence of a higher, namely, of the spiritual element is essential to its perfection. The high and divine beauty which can be loved without effeminacy, is that which is found in combination with the human will. Beauty is the mark God sets upon virtue. Every natural action is graceful. Every heroic act is also decent, and causes the place and the bystanders to shine. We are taught by great actions that the universe is the property of every individual in it. Every rational creature has all nature for his dowry and estate. It is his, if he will. He may divest himself of it; he may creep into a corner, and abdicate his kingdom, as most men do, but he is entitled to the world by his constitution. In proportion to the energy of his thought and will, he takes up the world into himself. "All those things for which men plough, build, or sail, obey virtue," said Sallust. "The winds and waves," said Gibbon, "are always on the side of the ablest navigators." So are the sun and moon and all the stars of heaven. When a noble act is done,—perchance in a scene of great natural beauty; when Leonidas and his three hundred martyrs consume one day in dying, and the sun and moon come each and look at them once in the steep defile of Thermopylæ; when Arnold Winkelried, in the high Alps, under the shadow of the avalanche, gathers in his side a sheaf of Austrian spears to break the line for his comrades; are not these heroes entitled to add the beauty of the scene to the beauty of the deed? When the bark of Columbus nears the shore of America;—before it, the beach lined with savages, fleeing out of all their huts of cane; the sea behind; and the purple mountains of the Indian Archipelago around, can we separate the man from the living picture? Does not the New World clothe his form with her palm-groves and savannahs as fit drapery? Ever does natural beauty steal in like air, and envelope great actions. When Sir Harry Vane was dragged up the Tower-hill, sitting on a sled, to suffer death, as the champion of the English laws, one of the multitude cried out to him, "You never sate on so glorious a seat." Charles II., to intimidate the citizens of London, caused the patriot Lord Russell to be drawn in an open coach, through the principal streets of the city, on his way to the scaffold. "But," his biographer says, "the multitude imagined they saw liberty and virtue sitting by his side." In private places, among sordid objects, an act of truth or heroism seems at once to

draw to itself the sky as its temple, the sun as its cradle. Nature stretches out her arms to embrace man, only let his thoughts be of equal greatness. Willingly does she follow his steps with the rose and the violet, and bend her lines of grandeur and grace to the decoration of her darling child. Only let his thoughts be of equal scope, and the frame will suit the picture. A virtuous man is in unison with her works, and makes the central figure of the visible sphere. Homer, Pindar, Socrates, Phocion, associate themselves fitly in our memory with the geography and climate of Greece. The visible heavens and earth sympathize with Jesus. And in common life, whosoever has seen a person of powerful character and happy genius, will have remarked how easily he took all things along with him,—the persons, the opinions, and the day, and nature became ancillary to a man.

3. There is still another aspect under which the beauty of the world may be viewed, namely, as it becomes an object of the intellect. Beside the relation of things to virtue, they have a relation to thought. The intellect searches out the absolute order of things as they stand in the mind of God, and without the colours of affection. The intellectual and the active powers seem to succeed each other, and the exclusive activity of the one, generates the exclusive activity of the other. There is something unfriendly in each to the other, but they are like the alternate periods of feeding and working in animals; each prepares and will be followed by the other. Therefore does beauty, which, in relation to actions, as we have seen, comes unsought, and comes because it is unsought, remain for the apprehension and pursuit of the intellect; and then again, in its turn, of the active power. Nothing divine dies. All good is eternally reproductive. The beauty of nature re-forms itself in the mind, and not for barren contemplation, but for new creation.

All men are in some degree impressed by the face of the world; some men even to delight. This love of beauty is taste. Others have the same love in such excess, that, content with admiring, they seek to embody it in new forms. The creation of beauty is Art.

The production of a work of art throws a light upon the mystery of humanity. A work of art is an abstract or epitome of the world. It is the result or expression of nature, in miniature. For, although the works of nature are innumerable and all different, the result or the expression of them all is similar and single. Nature is a sea of forms radically alike and even unique. A leaf, a sun-beam, a landscape, the ocean, make an analogous impression on the mind. What is common to them all—that perfectness and harmony, is beauty. The

standard of beauty is the entire circuit of natural forms,—the totality of nature; which the Italians expressed by defining beauty “il piu nell’ uno.” Nothing is quite beautiful alone: nothing but is beautiful in the whole. A single object is only so far beautiful as it suggests this universal grace. The poet, the painter, the sculptor, the musician, the architect, seek each to concentrate this radiance of the world on one point, and each in his several work to satisfy the love of beauty which stimulates him to produce. Thus is Art, a nature passed through the alembic of man. Thus in art, does nature work through the will of a man filled with the beauty of her first works.

The world thus exists to the soul to satisfy the desire of beauty. This element I call an ultimate end. No reason can be asked or given why the soul seeks beauty. Beauty, in its largest and profoundest sense, is one expression for the universe. God is the all-fair. Truth, and goodness, and beauty, are but different faces of the same All. But beauty in nature is not ultimate. It is the herald of inward and eternal beauty, and is not alone a solid and satisfactory good. It must stand as a part and not as yet the last or highest expression of the final cause of Nature.

IV.—LANGUAGE.

LANGUAGE is a third use which Nature subserves to man. Nature is the vehicle of thought, and in a simple, double, and threefold degree.

1. Words are signs of natural facts.
2. Particular natural facts are symbols of particular spiritual facts.

3. Nature is the symbol of spirit.

1. Words are signs of natural facts. The use of natural history is to give us aid in supernatural history: the use of the outer creation, to give us language for the beings and changes of the inward creation. Every word which is used to express a moral or intellectual fact, if traced to its root, is found to be borrowed from some material appearance. *Right* means *straight*; *wrong* means *twisted*. *Spirit* primarily means *wind*; *transgression*, the crossing of a line; *supercilious*, the raising of the eyebrow. We say the *heart* to express emotion, the *head* to denote thought; and *thought* and *emotion* are words borrowed from sensible things, and now appropriated to spiritual nature. Most of the process by which this transformation is made, is hidden from us in the remote time when language was framed but the same tendency may be daily observed in children. Children and savages use only nouns or

names of things, which they convert into verbs, and apply to analogous mental acts.

2. But this origin of all words that convey a spiritual import, —so conspicuous a fact in the history of language,—is our least debt to nature. It is not words only that are emblematic; it is things which are emblematic. Every natural fact is a symbol of some spiritual fact. Every appearance in nature corresponds to some state of the mind, and that state of the mind can only be described by presenting that natural appearance as its picture. An enraged man is a lion, a cunning man is a fox, a firm man is a rock, a learned man is a torch. A lamb is innocence; a snake is subtle spite; flowers express to us the delicate affections. Light and darkness are our familiar expression for knowledge and ignorance; and heat for love. Visible distance behind and before us, is respectively our image of memory and hope.

Who looks upon a river in a meditative hour, and is not reminded of the flux of all things? Throw a stone into the stream, and the circles that propagate themselves are the beautiful type of all influence. Man is conscious of a universal soul within or behind his individual life, wherein, as in a firmament, the natures of Justice, Truth, Love, Freedom, arise and shine. This universal soul, he calls Reason: it is not mine, or thine, or his, but we are its; we are its property and men. And the blue sky in which the private earth is buried, the sky with its eternal calm, and full of everlasting orbs, is the type of Reason. That which, intellectually considered, we call Reason, considered in relation to nature, we call Spirit. Spirit is the Creator. Spirit hath life in itself. And man in all ages and countries, embodies it in his language, as the FATHER.

It is easily seen that there is nothing lucky or capricious in these analogies, but that they are constant, and pervade nature. These are not the dreams of a few poets, here and there, but man is an analogist, and studies relations in all objects. He is placed in the centre of beings, and a ray of relation passes from every other being to him. And neither can man be understood without these objects, nor these objects without man. All the facts in natural history, taken by themselves, have no value, but are barren, like a single sex. But marry it to human history, and it is full of life. Whole Floras, all Linnaeus' and Buffon's volumes, are dry catalogues of facts; but the most trivial of these facts, the habit of a plant, the organs, or work, or noise of an insect, applied to the illustration of a fact in intellectual philosophy, or, in any way associated to human nature, affects us in the most lively and agreeable manner. The seed of a plant,—to what affecting analogies in the nature of man is that little fruit made use of, in all discourse, up to

the voice of Paul, who calls the human corpse a seed.—"It is sown a natural body; it is raised a spiritual body." The motion of the earth round its axis, and round the sun, makes the day and the year. These are certain amounts of brute light and heat. But is there no intent of an analogy between man's life and the seasons? And do the seasons gain no grandeur or pathos from that analogy? The instincts of the ant are very unimportant, considered as the ant's; but the moment a ray of relation is seen to extend from it to man, and the little drudge is seen to be a monitor, a little body with a mighty heart, then all its habits, even that said to be recently observed, that it never sleeps, become sublime.

Because of this radical correspondence between visible things and human thoughts, savages, who have only what is necessary, converse in figures. As we go back in history, language becomes more picturesque, until its infancy, when it is all poetry; or all spiritual facts are represented by natural symbols. The same symbols are found to make the original elements of all languages. It has moreover been observed, that the idioms of all languages approach each other in passages of the greatest eloquence and power. And as this is the first language, so is it the last. This immediate dependence of language upon nature, this conversion of an outward phenomenon into a type of somewhat in human life, never loses its power to affect us. It is this which gives that piquancy to the conversation of a strong-natured farmer or backwoodsman, which all men relish.

A man's power to connect his thought with its proper symbol, and so to utter it, depends on the simplicity of his character, that is, upon his love of truth, and his desire to communicate it without loss. The corruption of man is followed by the corruption of language. When simplicity of character and the sovereignty of ideas is broken up by the prevalence of secondary desires, the desire of riches, of pleasure, of power, and of praise—and duplicity and falsehood take place of simplicity and truth, the power over nature as an interpreter of the will, is in a degree lost; new imagery ceases to be created, and old words are perverted to stand for things which are not; a paper currency is employed, when there is no bullion in the vaults. In due time, the fraud is manifest, and words lose all power to stimulate the understanding or the affections. Hundreds of writers may be found in every long-civilized nation, who for a short time believe, and make others believe, that they see and utter truths, who do not of themselves clothe one thought in its natural garment, but who feed unconsciously on the language created by the primary writers of the country, those, namely, who hold primarily on nature.

But wise men pierce this rotten diet on and fasten words again to visible things; so that picturesque language is at once a commanding certificate that he who employs it, is a man in alliance with truth and God. The moment our discourse rises above the ground line of familiar facts, and is inflamed with passion or exalted by thought, it clothes itself in images. A man conversing in earnest, if he watch his intellectual processes, will find that a material image, more or less luminous, arises in his mind, contemporaneous with every thought, which furnishes the vestment of the thought. Hence, good writing and brilliant discourse are perpetual allegories. This imagery is spontaneous. It is the blending of experience with the present action of the mind. It is proper creation. It is the working of the Original Cause through the instruments he has already made.

These facts may suggest the advantage which the country life possesses for a powerful mind, over the artificial and curtailed life of cities. We know more from nature than we can at will communicate. Its light flows into the mind evermore, and we forget its presence. The poet, the orator, bred in the woods, whose senses have been nourished by their fair and appeasing changes, year after year, without design and without heed—shall not lose their lesson altogether, in the roar of cities or the broil of politics. Long thereafter, amidst agitation and terror in national councils—in the hour of revolution—these solemn images shall reappear in their morning lustre, as fit symbols and words of the thoughts which the passing events shall awaken. At the call of a noble sentiment, again the woods wave, the pines murmur, the river rolls and shines, and the cattle low upon the mountains, as he saw and heard them in his infancy. And with these forms, the spells of persuasion, the keys of power, are put into his hands.

3. We are thus assisted by natural objects in the expression of particular meanings. But how great a language to convey such pepper-corn informations! Did it need such noble races of creatures, this profusion of forms, this host of orbs in heaven, to furnish man with the dictionary and grammar of his municipal speech? Whilst we use this grand cipher to expedite the affairs of our pot and kettle, we feel that we have not yet put it to its use, neither are able. We are like travellers using the cinders of a volcano to roast their eggs. Whilst we see that it always stands ready to clothe what we would say, we cannot avoid the question, whether the characters are not significant of themselves. Have mountains, and waves, and skies no significance but what we consciously give them, when we employ them as emblems of our thoughts? The

world is emblematic. Parts of speech are metaphors, because the whole of nature is a metaphor of the human mind. The laws of moral nature answer to those of matter as face to face in a glass. "The visible world and the relation of its parts, is the dial plate of the invisible." The axioms of physics translate the laws of ethics. Thus, "the whole is greater than its part;" "reaction is equal to action;" "the smallest weight may be made to lift the greatest, the difference in weight being compensated by time;" and many the like propositions, which have an ethical as well as physical sense. These propositions have a much more extensive and universal sense when applied to human life, than when confined to technical use.

In like manner, the memorable words of history, and the proverbs of nations, consist usually of a natural fact, selected as a picture or parable of a moral truth. Thus: A rolling stone gathers no moss; A bird in the hand is worth two in the bush; A cripple in the right way, will beat a racer in the wrong; Make hay while the sun shines; 'Tis hard to carry a full cup even; Vinegar is the son of wine; The last ounce broke the camel's back; Long-lived trees make roots first;—and the like. In their primary sense these are trivial facts, but we repeat them for the value of their analogical import. What is true of proverbs, is true of all fables, parables, and allegories.

This relation between the mind and matter is not fancied by some poet, but stands in the will of God, and so is free to be known by all men. It appears to men, or it does not appear. When in fortunate hours we ponder this miracle, the wise man doubts, if, at all other times, he is not blind and deaf;

———"Can these things be,
And overcome us like a summer's cloud,
Without our special wonder?"

for the universe becomes transparent, and the light of higher laws than its own shines through it. It is the standing problem which has exercised the wonder and the study of every fine genius since the world began; from the era of the Egyptians and the Brahmins, to that of Pythagoras, of Plato, of Bacon, of Leibnitz, of Swedenborg. There sits the Sphinx at the road-side, and from age to age, as each prophet comes by, he tries his fortune at reading her riddle. There seems to be a necessity in spirit to manifest itself in material forms; and day and night, river and storm, beast and bird, acid and alkali, pre-exist in necessary Ideas in the mind of God, and are what they are by virtue of preceding affections, in the world of spirit. A Fact is the end or last issue of spirit. The visible creation is the terminus or the circumference of the in-

visible world. "Material objects," said a French philosopher, "are necessarily kinds of *scoriae* of the substantial thoughts of the Creator, which must always preserve an exact relation to their first origin; in other words, visible nature must have a spiritual and moral side."

This doctrine is abstruse, and though the images of "garment," "*scoriae*," "mirror," &c., may stimulate the fancy, we must summon the aid of subtler and more vital expositors to make it plain. "Every scripture is to be interpreted by the same spirit which gave it forth,"—is the fundamental law of criticism. A life in harmony with nature, the love of truth and of virtue, will purge the eyes to understand her text. By degrees we may come to know the primitive sense of the permanent objects of nature, so that the world shall be to us an open book, and every form significant of its hidden life and final cause.

A new interest surprises us, whilst, under the view now suggested, we contemplate the fearful extent and multitude of objects; since "every object rightly seen, unlocks a new faculty of the soul." That which was unconscious truth, becomes, when interpreted and defined in an object, a part of the domain of knowledge,—a new weapon in the magazine of power.

V.—DISCIPLINE.

IN view of the significance of nature, we arrive at once at a new fact, that nature is a discipline. This use of the world includes the preceding uses, as parts of itself.

Space, time, society, labour, climate, food, locomotion, the animals, the mechanical forces, give us sincerest lessons, day by day, whose meaning is unlimited. They educate both the Understanding and the Reason. Every property of matter is a school for the understanding,—its solidity or resistance, its inertia, its extension, its figure, its divisibility. The understanding adds, divides, combines, measures, and finds nutriment and room for its activity in this worthy scene. Meantime, Reason transfers all these lessons into its own world of thought, by perceiving the analogy that marries Matter and Mind.

I. Nature is a discipline of the understanding in intellectual truths. Our dealing with sensible objects is a constant exercise in the necessary lessons of difference, of likeness, of order, of being and seeming, of progressive arrangement; of assent from particular to general; of combination to one end of

manifold forces. Proportioned to the importance of the organ to be formed, is the extreme care with which its tuition is provided,—a care pretermitted in no single case. What tedious training, day after day, year after year, never ending, to form the common sense; what continual reproduction of annoyances, inconveniences, dilemmas; what rejoicing over us of little men; what disputing of prices, what reckonings of interest,—and all to form the Hand of the mind;—to instruct us that “good thoughts are no better than good dreams, unless they be executed!”

The same good office is performed by Property and its filial systems of debt and credit. Debt, grinding debt, whose iron face the widow, the orphan, and the sons of genius fear and hate;—debt, which consumes so much time, which so cripples and disheartens a great spirit with cares that seem so base, is a preceptor whose lessons cannot be foregone, and is needed most by those who suffer from it most. Moreover, property, which has been well compared to snow,—“if it fall level to-day, it will be blown into drifts to-morrow,”—is the surface action of internal machinery, like the index on the face of a clock. Whilst now it is the gymnastics of the understanding, it is having in the foresight of the spirit, experience in profounder laws.

The whole character and fortune of the individual are affected by the least inequalities in the culture of the understanding; for example, in the perception of differences. Therefore is Space, and therefore Time, that man may know that things are not huddled and lumped, but sundered and individual. A bell and a plough have each their use, and neither can do the office of the other. Water is good to drink, coal to burn, wool to wear; but wool cannot be drunk, nor water spun, nor coal eaten. The wise man shows his wisdom in separation, in gradation, and his scale of creatures and of merits is as wide as nature. The foolish have no range in their scale, but suppose every man is as every other man. What is not good they call the worst, and what is not hateful, they call the best.

In like manner, what good heed nature forms in us! She pardons no mistakes. Her yea is yea, and her nay, nay.

The first steps in Agriculture, Astronomy, Zoölogy, (those first steps which the farmer, the hunter, and the sailor take,) teach that nature's dice are always loaded; that in her heaps and rubbish are concealed sure and useful results.

How calmly and genially the mind apprehends one after another the laws of physics! What noble emotions dilate the mortal as he enters into the counsels of the creation, and feels by knowledge the privilege to BE! His insight refines him.

The beauty of nature shines in his own breast. Man is greater than he can see this, and the universe less, because Time and Space relations vanish as laws are known.

Here again we are impressed and even daunted by the immense Universe to be explored. "What we know, is a point to what we do not know." Open any recent journal of science, and weigh the problems suggested concerning Light, Heat, Electricity, Magnetism, Physiology, Geology, and judge whether the interest of natural science is likely to be soon exhausted.

Passing by many particulars of the discipline of nature, we must not omit to specify two.

The exercise of the Will or the lesson of power is taught in every event. From the child's successive possession of his several senses up to the hour when he saith, "Thy will be done!" he is learning the secret, that he can reduce under his will, not only particular events, but great classes, nay the whole series of events, and so conform all facts to his character. Nature is thoroughly mediate. It is made to serve. It receives the dominion of man as meekly as the ass on which the Saviour rode. It offers all its kingdoms to man as the raw material which he may mould into what is useful. Man is never weary of working it up. He forges the subtle and delicate air into wise and melodious words, and gives them wing as angels of persuasion and command. One after another, his victorious thought comes up with and reduces all things, until the world becomes, at last, only a realized will,—the double of the man.

2. Sensible objects conform to the premonitions of Reason and reflect the conscience. All things are moral; and in their boundless changes have an unceasing reference to spiritual nature. Therefore is nature glorious with form, colour, and motion, that every globe in the remotest heaven; every chemical change from the rudest crystal up to the laws of life; every change of vegetation from the first principle of growth in the eye of a leaf, to the tropical forest and antediluvian coal-mine; every animal function from the sponge up to Hercules, shall hint or thunder to man the laws of right and wrong, and echo the Ten Commandments. Therefore is nature ever the ally of Religion: lends all her pomp and riches to the religious sentiment. Prophet and priest, David, Isaiah, Jesus, have drawn deeply from this source. This ethical character so penetrates the bone and marrow of nature, as to seem the end for which it was made. Whatever private purpose is answered by any member or part, this is its public and universal function, and is never omitted. Nothing in nature is exhausted in its first use. When a thing has served

an end to the uttermost, it is wholly new for an ulterior service. In God, every end is converted into a new means. Thus the use of commodity, regarded by itself, is mean and squalid. But it is to the mind an education in the doctrine of Use, namely, that a thing is good only so far as it serves; that a conspiring of parts and efforts to the production of an end, is essential to any being. The first and gross manifestation of this truth, is our inevitable and hated training in values and wants, in corn and meat.

It has already been illustrated, that every natural process is a version of a moral sentence. The moral law lies at the centre of nature and radiates to the circumference. It is the pith and marrow of every substance, every relation, and every process. All things with which we deal, preach to us. What is a farm but a mute gospel? The chaff and the wheat, weeds and plants, blight, rain, insects, sun,—it is a sacred emblem from the first furrow of spring to the last stack which the snow of winter overtakes in the fields. But the sailor, the shepherd, the miner, the merchant, in their several resorts, have each an experience precisely parallel, and leading to the same conclusion: because all organizations are radically alike. Nor can it be doubted that this moral sentiment which thus scents the air, grows in the grain, and impregnates the waters of the world, is caught by man and sinks into his soul. The moral influence of nature upon every individual is that amount of truth which it illustrates to him. Who can estimate this? Who can guess how much firmness the sea-beaten rock has taught the fisherman? how much tranquillity has been reflected to man from the azure sky, over whose unspotted deeps the winds for evermore drive flocks of stormy clouds, and leave no wrinkle or stain? how much industry and providence and affection we have caught from the pantomime of brutes? What a searching preacher of self-command is the varying phenomenon of Health!

Herein is especially apprehended the unity of Nature,—the unity in variety,—which meets us everywhere. All the endless variety of things make an identical impression. Xenophanes complained in his old age, that, look where he would, all things hastened back to Unity. He was weary of seeing the same entity in the tedious variety of forms. The fable of Proteus has a cordial truth. A leaf, a drop, a crystal, a moment of time is related to the whole, and partakes of the perfection of the whole. Each particle is a microcosm, and faithfully renders the likeness of the world.

Not only resemblances exist in things whose analogy is obvious, as when we detect the type of the human hand in the flipper of the fossil saurus, but also in objects wherein

there is great superficial unlikeness. Thus architecture is called "frozen music," by De Stael and Goethe. Vitruvius thought an architect should be a musician. "A Gothic church," said Coleridge, "is a petrified religion." Michael Angelo maintained, that, to an architect, a knowledge of anatomy is essential. In Haydn's oratorios, the notes present to the imagination not only motions, as, of the snake, the stag, and the elephant, but colours also; as the green grass. The law of harmonic sounds reappears in the harmonic colours. The granite is differenced in its laws only by the more or less of heat, from the river that wears it away. The river, as it flows, resembles the air that flows over it; the air resembles the light which traverses it with more subtle currents; the light resembles the heat which rides with it through Space. Each creature is only a modification of the other; the likeness in them is more than the difference, and their radical law is one and the same. A rule of one art, or a law of one organization, holds true throughout nature. So intimate is this Unity, that, it is easily seen, it lies under the undermost garment of nature, and betrays its source in Universal Spirit. For, it pervades Thought also. Every universal truth which we express in words, implies or supposes every other truth. *Omne verum vero consonat.* It is like a great circle on a sphere, comprising all possible circles; which, however, may be drawn, and comprise it, in like manner. Every such truth is the absolute Ens seen from one side. But it has innumerable sides.

The central Unity is still more conspicuous in actions. Words are finite organs of the infinite mind. They cannot cover the dimensions of what is in truth. They break, chop, and impoverish it. An action is the perfection and publication of thought. A right action seems to fill the eye, and to be related to all nature. "The wise man, in doing one thing, does all; or, in the one thing he does rightly, he sees the likeness of all which is done rightly."

Words and actions are not the attributes of brute nature. They introduce us to the human form, of which all other organizations appear to be degradations. When this appears among so many that surround it, the spirit prefers it to all others. It says, 'From such as this, have I drawn joy and knowledge; in such as this, have I found and beheld myself; I will speak to it; it can speak again; it can yield me thought already formed and alive.' In fact, the eye,—the mind,—is always accompanied by these forms, male and female; and these are incomparably the richest informations of the power and order that lie at the heart of things. Unfortunately, every one of them bears the marks as of some injury; is

marred and superficially defective. Nevertheless, far different from the deaf and dumb nature around them, these all rest like fountain-pipes on the unfathomed sea of thought and virtue whereto they alone, of all organizations, are the entrances.

It were a pleasant inquiry to follow into detail their ministry to our education, but where would it stop? We are associated in adolescent and adult life with some friends, who, like skies and waters, are co-extensive with our idea; who, answering each to a certain affection of the soul, satisfy our desire on that side; whom we lack power to put at such focal distance from us, that we can mend or even analyze them. We cannot choose but love them. When much intercourse with a friend has supplied us with a standard of excellence, and has increased our respect for the resources of God who thus sends a real person to outgo our ideal; when he has, moreover, become an object of thought, and, whilst his character retains all its unconscious effect, is converted in the mind into solid and sweet wisdom,—it is a sign to us that his office is closing, and he is commonly withdrawn from our sight in a short time.

VI.—IDEALISM.

THUS is the unspeakable but intelligible and practicable meaning of the world conveyed to man, the immortal pupil in every object of sense. To this one end of Discipline, all parts of nature conspire.

A noble doubt perpetually suggests itself, whether this end be not the Final Cause of the Universe; and whether nature outwardly exists. It is a sufficient account of that Appearance we call the World, that God will teach a human mind, and so makes it the receiver of a certain number of congruent sensations, which we call sun and moon, man and woman, horse and trade. In my utter impotence to test the authenticity of the report of my senses, to know whether the impressions they make on me correspond with outlying objects, what difference does it make, whether Orion is up there in heaven, or some god paints the image in the firmament of the soul? The relations of parts and the end of the whole remaining the same, what is the difference, whether land and sea interact, and worlds revolve and intermingle without number or end,—deep yawning under deep, and galaxy balancing galaxy, throughout absolute space,—or, whether, without relations of time and space, the same appearances are inscribed

in the constant faith of man? Whether nature enjoy a substantial existence without, or is only in the apocalypse of the mind, it is alike useful and alike venerable to me. Be it what it may, it is ideal to me, so long as I cannot try the accuracy of my senses.

The frivolous make themselves merry with the Ideal theory, as if its consequences were burlesque: as if it affected the stability of nature. It surely does not. God never jests with us, and will not compromise the end of nature, by permitting any inconsequence in its procession. Any distrust of the permanence of laws, would paralyze the faculties of man. Their permanence is sacredly respected, and his faith therein is perfect. The wheels and springs of man are all set to the hypothesis of the permanence of nature. We are not built like a ship to be tossed, but like a house to stand. It is a natural consequence of this structure, that, so long as the active powers predominate over the reflective, we resist with indignation any hint that nature is more short-lived or mutable than spirit. The broker, the wheelwright, the carpenter, the toll-man are much displeased at the intimation.

But whilst we acquiesce entirely in the permanence of natural laws, the question of the absolute existence of nature still remains open. It is the uniform effect of culture on the human mind, not to shake our faith in the stability of particular phenomena, as of heat, water, azote; but to lead us to regard nature as phenomenon, not a substance; to attribute necessary existence to spirit; to esteem nature as an accident and an effect.

To the senses and the unrenewed understanding, belongs a sort of instinctive belief in the absolute existence of nature. In their view, man and nature are indissolubly joined. Things are ultimates, and they never look beyond their sphere. The presence of reason mars this faith. The first effort of thought tends to relax this despotism of the senses, which binds us to nature as if we were a part of it, and shows us nature aloof, and, as it were, afloat. Until this higher agency intervened, the animal eye sees, with wonderful accuracy, sharp outlines and coloured surfaces. When the eye of Reason opens, to outline and surface are at once added grace and expression. These proceed from imagination and affection, and abate somewhat of the angular distinctness of objects. If the Reason be stimulated to more earnest vision, outlines and surfaces become transparent, and are no longer seen; causes and spirits are seen through them. The best moments of life are these delicious awakenings of the higher powers, and the reverential withdrawing of nature before its God.

Let us proceed to indicate the effects of culture. I. Our

first institution in the Ideal philosophy is a hint from nature herself.

Nature is made to conspire with spirit to emancipate us. Certain mechanical changes, a small alteration in our local position, apprizes us of a dualism. We are strangely affected by seeing the shore from a moving ship, from a balloon, or through the tints of an unusual sky. The last change in our point of view, gives the whole world a pictorial air. A man who seldom rides, needs only to get into a coach and traverse his own town, to turn the street into a puppet-show. The men, the women,—talking, running, bartering, fighting,—the earnest mechanic, the loungee, the beggar, the boys, the dogs, are unrealized at once, or, at least, wholly detached from all relation to the observer, and seen as apparent, not substantial beings. What new thoughts are suggested by seeing a face of country quite familiar, in the rapid movement of the railroad car! Nay, the most wonted objects (make a very slight change in the point of vision) please us most. In a camera obscura, the butcher's cart, and the figure of one of our own family, amuse us. So a portrait of a well-known face gratifies us. Turn the eyes upside down, by looking at the landscape through your legs, and how agreeable is the picture, though you have seen it any time these twenty years!

In these cases, by mechanical means, is suggested the difference between the observer and the spectacle,—between man and nature. Hence arises a pleasure mixed with awe; I may say, a low degree of the sublime is felt from the fact, probably, that man is hereby apprized, that, whilst the world is a spectacle, something in himself is stable.

2. In a higher manner, the poet communicates the same pleasure. By a few strokes he delineates, as on air, the sun, the mountain, the camp, the city, the hero, the maiden, not different from what we know them, but only lifted from the ground and afloat before the eye. He unfixes the land and the sea, makes them revolve around the axis of his primary thought, and disposes them anew. Possessed himself by a heroic passion, he uses matter as symbols of it. The sensual man conforms thoughts to things; the poet conforms things to his thoughts. The one esteems nature as rooted and fast; the other, as fluid, and impresses his being thereon. To him, the refractory world is ductile and flexible; he invests dust and stones with humanity, and makes them the words of the Reason. The Imagination may be defined to be, the use which the Reason makes of the material world. Shakespeare possesses the power of subordinating nature for the purposes of expression, beyond all poets. His imperial muse tosses the creation like a bauble from hand to hand, and uses it to

embody any caprice of thought that is uppermost in his mind. The remotest spaces of nature are visited, and the farthest sundered things are brought together, by a subtle spiritual connection. We are made aware that magnitude of material things is relative, and all objects shrink and expand to serve the passion of the poet. Thus, in his sonnets, the lays of birds, the scents and dyes of flowers, he finds to be the *shadows* of his beloved; time, which keeps her from him, is his *chest*; the suspicion she has awakened, is her *ornament*;

The ornament of beauty is Suspect,
A crow which flies in heaven's sweetest air.

His passion is not the fruit of chance; it swells, as he speaks, to a city, or a state.

No, it was builded far from accident;
It suffers not in smiling pomp, nor falls
Under the brow of thralling discontent;
It fears not policy, that heretic,
That works on leases of short numbered hours,
But all alone stands hugely politic.

In the strength of his constancy, the Pyramids seem to him recent and transitory. The freshness of youth and love dazzles him, with its resemblance to morning.

Take those lips away
Which so sweetly were forsworn:
And those eyes,—the break of day,
Lights that do mislead the morn.

The wild beauty of this hyperbole, I may say, in passing, it would not be easy to match in literature.

This transfiguration which all material objects undergo through the passion of the poet,—this power which he exerts to dwarf the great, to magnify the small,—might be illustrated by a thousand examples from his Plays. I have before me the *Tempest*, and will cite only these few lines.

PROSPERO. The strong based promontory
Have I made shake, and by the spurs plucked up
The pine and cedar.

Prospero calls for music to soothe the frantic Alonso, and his companions;

A solemn air, and the best comforter
To an unsettled fancy, cure thy brains
Now useless, boiled within thy skull.

steering the darkness, so that rising
Begin to chase the ignorant fumes that mantle
Their clearer reason.

Their understanding
Begins to swell: and the approaching tide
Will shortly fill the reasonable shore
That now lies foul and muddy.

The perception of real affinities between events (that is to say, of *ideal* affinities, for those only are real), enables the poet thus to make free with the most imposing forms and phenomena of the world, and to assert the predominance of the soul.

3. Whilst thus the poet animates nature with his own thoughts, he differs from the philosopher only herein, that the one proposes Beauty as his main end; the other Truth. But the philosopher, not less than the poet, postpones the apparent order and relations of things to the empire of thought. "The problem of philosophy," according to Plato, "is, for all that exists conditionally, to find a ground unconditioned and absolute." It proceeds on the faith that a law determines all phenomena, which being known, the phenomena can be predicted. That law, when in the mind, is an idea. Its beauty is infinite. The true philosopher and the true poet are one, and a beauty, which is truth, and a truth, which is beauty, is the aim of both. Is not the charm of one of Plato's or Aristotle's definitions, strictly like that of the Antigone of Sophocles? It is, in both cases, that a spiritual life has been imparted to nature; that the solid seeming block of matter has been pervaded and dissolved by a thought; that this feeble human being has penetrated the vast masses of nature with an informing soul, and recognised itself in their harmony, that is, seized their law. In physics, when this is attained, the memory disburthens itself of its cumbrous catalogues of particulars, and carries centuries of observation in a single formula.

Thus even in physics, the material is degraded before the spiritual. The astronomer, the geometer, rely on their irrefragable analysis, and disdain the results of observation. The sublime remark of Euler on his law of arches, "This will be found contrary to all experience, yet is true:" had already transferred nature into the mind, and left matter like an out-cast corpse.

4. Intellectual science has been observed to beget invariably a doubt of the existence of matter. Turgot said, "He that has never doubted the existence of matter, may be assured he has no aptitude for metaphysical inquiries." It fastens the atten-

tion upon immortal necessary uncreated natures, that is, upon Ideas; and in their presence, we feel that the outward circumstance is a dream and a shade. Whilst we wait in this Olympus of gods, we think of nature as an appendix to the soul. We ascend into their region, and know that these are the thoughts of the Supreme Being. "These are they who were set up from everlasting, from the beginning, or ever the earth was. When he prepared the heavens, they were there; when he established the clouds above, when he strengthened the fountains of the deep. Then they were by him, as one brought up with him. Of them took he counsel."

Their influence is proportionate. As objects of science, they are accessible to few men. Yet all men are capable of being raised by piety or by passion, into their region. And no man touches these divine natures, without becoming, in some degree, himself divine. Like a new soul, they renew the body. We become physically nimble and lightsome; we tread on air; life is no longer irksome, and we think it will never be so. No man fears age or misfortune or death, in their serene company, for he is transported out of the district of change. Whilst we behold unveiled the nature of Justice and Truth, we learn the difference between the absolute and the conditional or relative. We apprehend the absolute. As it were, for the first time, *we exist*. We become immortal, for we learn that time and space are relations of matter; that, with a perception of truth, or a virtuous will, they have no affinity.

5. Finally, religion and ethics, which may be fitly called,—the practice of ideas, or the introduction of ideas into life,—have an analogous effect with all lower culture, in degrading nature and suggesting its dependence on spirit. Ethics and religion differ herein; that the one is the system of human duties commencing from man; the other, from God. Religion includes the personality of God; Ethics does not. They are one to our present design. They both put nature under foot. The first and last lesson of religion is, "The things that are seen are temporal; the things that are unseen are eternal." It puts an affront upon nature. It does that for the unschooled, which philosophy does for Berkeley and Viasa. The uniform language that may be heard in the churches of the most ignorant sects, is,—"*Contemn the unsubstantial shows of the world; they are vanities, dreams, shadows, unrealities: seek the realities of religion.*" The devotee flouts nature. Some theosophists have arrived at a certain hostility and indignation towards matter, as the Manichean and Plotinus. They distrusted in themselves any looking back to these flesh-pots of Egypt. Plotinus was ashamed of his body. In short, they might all say of matter, what Michael Angelo said of ex-

ternal beauty, "it is the frail and weary weed, in which God dresses the soul, which he has called into time."

It appears that motion, poetry, physical and intellectual science, and religion, all tend to affect our convictions of the reality of the external world. But I own there is something ungrateful in expanding too curiously the particulars of the general proposition, that all culture tends to imbue us with idealism. I have no hostility to nature, but a child's love to it. I expand and live in the warm day like corn and melons. Let us speak her fair. I do not wish to fling stones at my beautiful mother, nor soil my gentle nest. I only wish to indicate the true position of nature in regard to man, wherein to establish man, all right education tends; as the ground which to attain is the object of human life, that is, of man's connection with nature. Culture inverts the vulgar views of nature, and brings the mind to call that apparent, which it uses to call real, and that real, which it uses to call visionary. Children, it is true, believe in the external world. The belief that it appears only, is an afterthought, but with culture, this faith will as surely arise in the mind as did the first.

The advantage of the ideal theory over the popular faith, is this, that it presents the world in precisely that view which is most desirable to the mind. It is, in fact, the view which Reason, both speculative and practical, that is, philosophy and virtue, take. For, seen in the light of thought, the world always is phenomenal; and virtue subordinates it to the mind. Idealism sees the world in God. It beholds the whole circle of persons and things, of actions and events, of country and religion, not as painfully accumulated, atom after atom, act after act, in an aged creeping Past, but as one vast picture, which God paints on the instant eternity, for the contemplation of the soul. Therefore the soul holds itself off from a too trivial and microscopic study of the universal tablet. It respects the end too much, to immerse itself in the means. It sees something more important in Christianity, than the scandals of ecclesiastical history, or the niceties of criticism; and, very incurious concerning persons or miracles, and not at all disturbed by chasms of historical evidence, it accepts from God the phenomenon, as it finds it, as the pure and awful form of religion in the world. It is not hot and passionate at the appearance of what it calls its own good or bad fortune, at the union or opposition of other persons. No man is its enemy. It accepts whatsoever befalls, as part of its lesson. It is a watcher more than a doer, and it is a doer, only that it may the better watch.

VII.—SPIRIT.

IT is essential to a true theory of nature and of man, that it should contain somewhat progressive. Uses that are exhausted or that may be, and facts that end in the statement, cannot be all that is true of this brave lodging wherein man is harboured, and wherein all his faculties find appropriate and endless exercise. And all the uses of nature admit of being summed in one, which yields the activity of man an infinite scope. Through all its kingdoms, to the suburbs and outskirts of things, it is faithful to the cause whence it had its origin. It always speaks of Spirit. It suggests the absolute. It is a perpetual effect. It is a great shadow pointing always to the sun behind us.

The aspect of nature is devout. Like the figure of Jesus, she stands with bended head, and hands folded upon the breast. The happiest man is he who learns from nature the lesson of worship.

Of that ineffable essence which we call Spirit, he that thinks most, will say least. We can foresee God in the coarse, and, as it were, distant phenomena of matter; but when we try to define and describe himself, both language and thought desert us, and we are as helpless as fools and savages. That essence refuses to be recorded in propositions, but when man has worshipped him intellectually, the noblest ministry of nature is to stand as the apparition of God. It is the organ through which the universal spirit speaks to the individual, and strives to lead back the individual to it.

When we consider Spirit, we see that the views already presented do not include the whole circumference of man. We must add some related thoughts.

Three problems are put by nature to the mind; What is matter? Whence is it? and Whereto? The first of these questions only, the ideal theory answers. Idealism saith: matter is a phenomenon, not a substance. Idealism acquaints us with the total disparity between the evidence of our own being, and the evidence of the world's being. The one is perfect; the other, incapable of any assurance; the mind is a part of the nature of things; the world is a divine dream, from which we may presently awake to the glories and certainties of day. Idealism is a hypothesis to account for nature by other principles than those of carpentry and chemistry. Yet, if it only deny the existence of matter, it does not satisfy the demands of the spirit. It leaves God out of me. It leaves

me in the splendid labyrinth of my perceptions, to wander without end. Then the heart resists it, because it baulks the affections in denying substantive being to men and women. Nature is so pervaded with human life, that there is something of humanity in all, and in every particular. But this theory makes nature foreign to me, and does not account for that consanguinity which we acknowledge to it.

Let it stand, then, in the present state of our knowledge, merely as a useful introductory hypothesis, serving to apprise us of the eternal distinction between the soul and the world.

But when, following the invisible steps of thought, we come to inquire, Whence is matter? and Whereto? many truths arise to us out of the recesses of consciousness. We learn that the highest is present to the soul of man, that the dread universal essence, which is not wisdom, or love, or beauty, or power, but all in one, and each entirely, is that for which all things exist, and that by which they are; that spirit creates: that behind nature, throughout nature, spirit is present; one and not compound, it does not act upon us from without, that is, in space and time, but spiritually, or through ourselves: therefore, that spirit, that is, the Supreme Being, does not build up nature around us, but puts it forth through us, as the life of the tree puts forth new branches and leaves through the pores of the old. As a plant upon the earth, so a man rests upon the bosom of God; he is nourished by unfailing fountains, and draws, at his need, inexhaustible power. Who can set bounds to the possibilities of man? Once inhale the upper air, being admitted to behold the absolute natures of justice and truth, and we learn that man has access to the entire mind of the Creator, is himself the creator in the finite. This view, which admonishes me where the sources of wisdom and power lie, and points to virtue as to

"The golden key
Which opens the palace of eternity,"

carries upon its face the highest certificate of truth, because it animates me to create my own world through the purification of my soul.

The world proceeds from the same spirit as the body of man. It is a remoter and inferior incarnation of God, a projection of God in the unconscious. But it differs from the body in one important respect. It is not, like that, now subjected to the human will. Its serene order is inviolable by us. It is, therefore, to us, the present expositor of the divine mind. It is a fixed point whereby we may measure our departure. As we degenerate, the contrast between us and our house is more evident. We are as much strangers in nature, as we are aliens

from God. We do not understand the notes of birds. The fox and the deer run away from us; the bear and tiger rend us. We do not know the uses of more than a few plants, as corn and the apple, the potato and the vine. Is not the landscape, every glimpse of which hath a grandeur, a face of him? Yet this may show us what discord is between man and nature, for you cannot freely admire a noble landscape, if labourers are digging in the field hard by. The poet finds something ridiculous in his delight, until he is out of the sight of men.

VIII.—PROSPECTS.

IN inquiries respecting the laws of the world and the frame of things, the highest reason is always the truest. That which seems faintly possible—it is so refined, is often faint and dim because it is deepest seated in the mind among the eternal verities. Empirical science is apt to cloud the sight, and, by the very knowledge of functions and processes, to bereave the student of the manly contemplation of the whole. The savant becomes unpoetic. But the best read naturalist, who lends an entire and devout attention to truth, will see that there remains much to learn of his relation to the world, and that it is not to be learned by any addition or subtraction or other comparison of known quantities, but is arrived at by untaught sallies of the spirit, by a continual self-recovery, and by entire humility. He will perceive that there are far more excellent qualities in the student than preciseness and infallibility; that a guess is often more fruitful than an indisputable affirmation, and that a dream may let us deeper into the secret of nature than a hundred concerted experiments. For, the problems to be solved are precisely those which the physiologist and the naturalist omit to state. It is not so pertinent to man to know all the individuals of the animal kingdom, as it is to know whence and whereto is this tyrannizing unity in his constitution, which evermore separates and classifies things, endeavouring to reduce the most diverse to one form. When I behold a rich landscape, it is less to my purpose to recite correctly the order and superposition of the strata, than to know why all thought of multitude is lost in a tranquil sense of unity. I cannot greatly honour minuteness in details, so long as there is no hint to explain the relation between things and thoughts; no ray upon the *metaphysics* of conchology, of botany, of the arts, to show the relation of the forms of flowers, shells, animals, architecture, to the mind, and build science upon ideas. In a cabinet of natural history, we

become sensible of a certain occult recognition and sympathy in regard to the most unwieldly and eccentric forms of beast, fish, and insect. The American who has been confined, in his own country, to the sight of buildings designed after foreign models, is surprised on entering York Minster or St. Peter's at Rome, by the feeling that these structures are imitations also,—faint copies of an invisible archetype. Nox has science sufficient humanity, so long as the naturalist overlooks that wonderful congruity which subsists between man and the world; of which he is lord, not because he is the most subtle inhabitant, but because he is its head and heart, and finds something of himself in every great and small thing, in every mountain stratum, in every new law of colour, fact of astronomy, or atmospheric influence which observation or analysis lay open. A perception of this mystery inspires the muse of George Herbert, the beautiful psalmist of the seventeenth century. The following lines are part of his little poem of

“Man is all symmetry,
Full of proportions, one limb to another,
And all to all the world besides.
Each part may call the farthest, brother;
For head with foot hath private amity,
And both with moons and tides.
“Nothing hath got so far
But man hath caught and kept it as his prey;
His eyes dismount the highest star;
He is in little all the sphere.
Herbs gladly cure our flesh, because that they
Find their acquaintance there.
“For us, the winds do blow,
The earth doth rest, heaven move, and fountains flow;
Nothing we see, but means our good,
As our delight, or as our treasure;
The whole is either our cupboard of food,
Or cabinet of pleasure.
“The stars have us to bed;
Night draws the curtain; which the sun withdraws
Music and light attend our head.
All things unto our flesh are kind,
In their descent and being; to our mind,
In their ascent and cause.
“More servants wait on man
Than he doth take notice of. In every path,
He treads down that which doth befriend him
When sickness makes him pale and wan.
Oh mighty love! Man is one world, and hath
Another to attend him.”

The perception of this class of truths makes the attraction which draws men to science, but the end is lost sight of in attention to the means. In view of this half-sight of science, we accept the sentence of Plato, that "poetry comes nearer to vital truth than history." Every surmise and vaticination of the mind is entitled to a certain respect, and we learn to prefer imperfect theories, and sentences, which contain glimpses of truth, to digested systems which have no one valuable suggestion. A wise writer will feel that the ends of study and composition are best answered by announcing undiscovered regions of thought, and so communicating, through hope, new activity to the torpid spirit.

I shall therefore conclude this essay with some traditions of man and nature, which a certain poet sang to me; and which, as they have always been in the world, and perhaps reappear to every bard, may be both history and prophecy.

'The foundations of man are not in matter, but in spirit. But the element of spirit is eternity. To it, therefore, the longest series of events, the oldest chronologies, are young and recent. In the cycle of the universal man, from whom the known individuals proceed, centuries are points, and all history is but the epoch of one degradation.

'We distrust and deny inwardly our sympathy with nature. We own and disown our relation to it, by turns. We are, like Nebuchadnezzar, dethroned, bereft of reason, and eating grass like an ox. But who can set limits to the remedial force of spirit?

'A man is a god in ruins. When men are innocent, life shall be longer, and shall pass into the immortal, as gently as we awake from dreams. Now, the world would be insane and rabid, if these disorganizations should last for hundreds of years. It is kept in check by death and infancy. Infancy is the perpetual Messiah, which comes into the arms of fallen men, and pleads with them to return to paradise.

'Man is the dwarf of himself. Once he was permeated and dissolved by spirit. He filled nature with his overflowing currents. Out from him sprang the sun and moon: from man, the sun; from woman, the moon. The laws of his mind, the periods of his actions, externized themselves into day and night, into the year and the seasons. But, having made for himself this huge shell, his waters retired; he no longer fills the veins and veinlets; he is shrunk to a drop. He sees, that the structure still fits him, but fits him colossally. Say, rather, once it fitted him, now it corresponds to him from far and on high. He adores timidly his own work. Now is man the follower of the sun, and woman the follower of the moon. Yet sometimes he starts in his slumber, and wonders at himself

and his house, and muses strangely at the resemblance betwixt him and it. He perceives that if his law is still paramount, if still he have elemental power, if his word is sterling yet in nature, it is not conscious power, it is not inferior but superior to his will. It is Instinct.' Thus my Orphic poet sang.

At present, man applies to nature but half his force. He works on the world with his understanding alone. He lives in it, and masters it by a penny-wisdom; and he that works most in it, is but a half-man, and whilst his arms are strong and his digestion good, his mind is imbruted, and he is a selfish savage. His relation to nature, his power over it, is through the understanding; as by manure; the economic use of fire, wind, water, and the mariner's needle; steam, coal, chemical agriculture; the repairs of the human body by the dentist and the surgeon. This is such a resumption of power, as if a banished king should buy his territories inch by inch, instead of vaulting at once into his throne. Meantime, in the thick darkness, there are not wanting gleams of a better light—occasional examples of the action of man upon nature with his entire force—with reason as well as understanding. Such examples are; the traditions of miracles in the earliest antiquity of all nations; the history of Jesus Christ; the achievements of a principle, as in religious and political revolutions, and in the abolition of the Slave-trade, the miracles of enthusiasm, as those reported of Swedenborg, Hohenlohe, and the Shakers; many obscure and yet contested facts, now arranged under the name of Animal Magnetism; prayer; eloquence; self-healing; and the wisdom of children. These are examples of Reason's momentary grasp of the sceptre; the exertions of a power which exists not in time or space, but an instantaneous in-streaming causing power. The difference between the actual and the ideal force of man is happily figured by the schoolmen, in saying, that the knowledge of man is an evening knowledge, *vespertina cognitio*, but that of God is a morning knowledge, *matutina cognitio*.

The problem of restoring to the world original and eternal beauty, is solved by the redemption of the soul. The ruin or the blank, that we see when we look at nature, is in our own eye. The axis of vision is not coincident with the axis of things, and so they appear not transparent but opaque. The reason why the world lacks unity, and lies broken and in heaps, is, because man is disunited with himself. He cannot be a naturalist, until he satisfies all the demands of the spirit. Love is as much its demand, as perception. Indeed, neither can be perfect without the other. In the uttermost meaning of the words, thought is devout, and devotion is thought. Deep calls unto deep, But in actual life, the marriage is not

celebrated. There are innocent men who worship God after the tradition of their fathers, but their sense of duty has not yet extended to the use of all their faculties. And there are patient naturalists, but they freeze their subject under the wintry light of the understanding. Is not prayer also a study of truth—a sally of the soul into the unfound infinite? No man ever prayed heartily, without learning something. But when a faithful thinker, resolute to detach every object from personal relations, and see it in the light of thought, shall, at the same time, kindle science with the fire of the holiest affections, then will God go forth anew into the creation.

It will not need, when the mind is prepared for study, to search for objects. The invariable mark of wisdom is to see the miraculous in the common. What is a day? What is a year? What is summer? What is woman? What is a child? What is sleep? To our blindness, these things seem unaffecting. We make fables to hide the baldness of the fact, and conform it, as we say, to the higher law of the mind. But when the fact is seen under the light of an idea, the gaudy fable fades and shrivels. We behold the real higher law. To the wise, therefore, a fact is true poetry, and the most beautiful of fables. These wonders are brought to our own door. You also are a man. Man and woman, and their social life, poverty, labour, sleep, fear, fortune, are known to you. Learn that none of these things is superficial, but that each phenomenon has its roots in the faculties and affections of the mind. Whilst the abstract question occupies your intellect, nature brings it in the concrete to be solved by your hands. It were a wise inquiry for the closet, to compare, point by point, especially at remarkable crises in life, our daily history, with the rise and progress of ideas in the mind.

So shall we come to look at the world with new eyes. It shall answer the endless inquiry of the intellect—What is truth? and of the affections—What is good? by yielding itself passive to the educated Will. Then shall come to pass what my poet said; 'Nature is not fixed but fluid. Spirit alters, moulds, makes it. The immobility or bruteness of nature, is the absence of spirit; to pure spirit, it is fluid, it is volatile, it is obedient. Every spirit builds itself a house; and beyond its house, a world; and beyond its world, a heaven. Know then, that the world exists for you. For you is the phenomenon perfect. What we are, that only can we see. All that Adam had, all that Cæsar could, you have and can do. Adam called his house, heaven and earth; Cæsar called his house, Rome; you perhaps call yours, a cobbler's trade; a hundred acres of ploughed land; or a scholar's garret. Yet line for line and point for point, your dominion is as great as theirs, though

without fine names. Build, therefore, your own world. As fast as you conform your life to the pure idea in your mind, that will unfold its great proportions. A correspondent revolution in things will attend the influx of the spirit. So fast will disagreeable appearances, swine, spiders, snakes, pests, madhouses, prisons, enemies, vanish; they are temporary and shall be no more seen. The sordid and filth of nature, the sun shall dry up, and the wind exhale. As when the summer comes from the south; the snow-banks melt, and the face of the earth becomes green before it, so shall the advancing spirit create its ornaments along its path, and carry with it the beauty it visits, and the song which enchants it; it shall draw beautiful faces, warm hearts, wise discourse, and heroic acts, around its way, until evil is no more seen. The kingdom of man over nature, which cometh not with observation—a dominion such as now is beyond his dream of God—he shall enter without more wonder than the blind man feels who is gradually restored to perfect sight.'

THE AMERICAN SCHOLAR.

AN ORATION DELIVERED BEFORE THE PHI BETA KAPPA SOCIETY
AT CAMBRIDGE, AUGUST 31, 1837.

MR. PRESIDENT AND GENTLEMEN,

I GREET you on the recommencement of our literary year. Our anniversary is one of hope, and, perhaps, not enough of labour. We do not meet for games of strength or skill, for the recitation of histories, tragedies, and odes, like the ancient Greeks; for parliaments of love and poesy, like the Troubadours; nor for the advancement of science, like our contemporaries in the British and European capitals. Thus far, our holiday has been simply a friendly sign of the survival of the love of letters amongst a people too busy to give to letters any more. As such, it is precious as the sign of an indestructible instinct. Perhaps the time is already come, when it ought to be, and will be, something else; when the sluggish intellect of this continent will look from under its iron lids, and fill the postponed expectation of the world with something better than the exertions of mechanical skill. Our day of dependence, our long apprenticeship to the learning of other lands, draws to a close. The millions, that around us are rushing into life, cannot always be fed on the sere remains of foreign harvests. Events, actions, arise, that must be sung, that will sing themselves. Who can doubt that poetry will revive and lead in a new age, as the star in the constellation Harp, which now flames in our zenith, astronomers announce, shall one day be the pole-star for a thousand years?

In this hope, I accept the topic which not only usage, but the nature of our association, seem to prescribe to this day—the AMERICAN SCHOLAR. Year by year, we come up hither to read one more chapter of his biography. Let us inquire what light new days and events have thrown on his character, and his hopes.

It is one of those fables, which, out of an unknown antiquity, convey an unlooked-for wisdom, that the gods, in the beginning, divided Man into men, that he might be more helpful to himself; just as the hand was divided into fingers, the better to answer its end.

The old fable covers a doctrine ever new and sublime; that there is One Man—present to all particular men only partially, or through one faculty; and that you must take the whole society to find the whole man. Man is not a farmer, or a professor, or an engineer, but he is all. Man is priest, and

scholar, and statesman, and producer, and soldier. In the *divided* or social state, these functions are parcelled out to individuals, each of whom aims to do his stint of the joint work, whilst each other performs his. The fable implies, that the individual, to possess himself, must sometimes return from his own labour to embrace all the other labourers. But, unfortunately, this original unit, this fountain of power, has been so distributed to multitudes, has been so minutely subdivided and peddled out, that it is spilled into drops, and cannot be gathered. The state of society is one in which the members have suffered amputation from the trunk, and strut about so many walking monsters—a good finger, a neck, a stomach, an elbow, but never a man.

Man is thus metamorphosed into a thing, into many things. The planter, who is Man sent out into the field to gather food, is seldom cheered by any idea of the true dignity of his ministry. He sees his bushel and his cart, and nothing beyond, and sinks into the farmer, instead of Man on the farm. The tradesman scarcely ever gives an ideal worth to his work, but is ridden by the routine of his craft, and the soul is subject to dollars. The priest becomes a form; the attorney, a statute-book; the mechanic, a machine; the sailor, a rope of the ship.

In this distribution of functions, the scholar is the delegated intellect. In the right state, he is, *Man Thinking*. In the degenerate state, when the victim of society, he tends to become a mere thinker, or, still worse, the parrot of other men's thinking.

In this view of him, as *Man Thinking*, the theory of his office is contained. His nature solicits with all her placid, all her monitory pictures; him the past instructs; him the future invites. Is not, indeed, every man a student, and do not all things exist for the student's behoof? And, finally, is not the true scholar the only true master? But the old oracle said, "All things have two handles: beware of the wrong one." In life, too often, the scholar errs with mankind and forfeits his privilege. Let us see him in his school, and consider him in reference to the main influences he receives.

I. The first in time and the first in importance of the influences upon the mind is that of nature. Every day, the sun; and, after sunset, night and her stars. Ever the winds blow; ever the grass grows. Every day, men and women, conversing, beholding and beholden. The scholar is he of all men whom this spectacle most engages. He must settle its value in his mind. What is nature to him? There is never a beginning, there is never an end, to the inexplicable continuity of this web of God, but always circular power returning into itself. Therein it resembles his own spirit, whose beginning, whose

ending, he never can find—so entire, so boundless. Far, too, as her splendours shine, system on system shooting like rays, upward, downward, without centre, without circumference—in the mass and in the particle, nature hastens to render account of herself to the mind. Classification begins. To the young mind, every thing is individual, stands by itself. By and by, it finds how to join two things, and see in them one nature; then three, then three thousand; and so, tyrannized over by its own unifying instinct, it goes on tying things together, diminishing anomalies, discovering roots running under ground, whereby contrary and remote things cohere, and flower out from one stem. It presently learns, that, since the dawn of history, there has been a constant accumulation and classifying of facts. But what is classification but the perceiving that these objects are not chaotic, and are not foreign, but have a law which is also a law of the human mind? The astronomer discovers that geometry, a pure abstraction of the human mind, is the measure of planetary motion. The chemist finds proportions and intelligible method throughout matter; and science is nothing but the finding of analogy, identity, in the most remote parts. The ambitious soul sits down before each refractory fact; one after another, reduces all strange constitutions, all new powers, to their class and their law, and goes on for ever to animate the last fibre of organization, the outskirts of nature, by insight.

Thus to him, to this schoolboy under the bending dome of day, is suggested, that he and it proceed from one root; one is leaf and one is flower; relation, sympathy, stirring in every vein. And what is that root? Is not that the soul of his soul?—A thought too bold—a dream too wild. Yet when this spiritual light shall have revealed the law of more earthly natures—when he has learned to worship the soul, and to see that the natural philosophy that now is, is only the first gropings of its gigantic hand, he shall look forward to an ever expanding knowledge as to a becoming creator. He shall see, that nature is the opposite of the soul, answering to it part for part. One is seal, and one is print. Its beauty is the beauty of his own mind. Its laws are the laws of his own mind. Nature then becomes to him the measure of his attainments. So much of nature as he is ignorant of, so much of his own mind does he not yet possess. And, in fine, the ancient precept, "Know thyself," and the modern precept, "Study nature," become at last one maxim.

II. The next great influence into the spirit of the scholar, is, the mind of the Past,—in whatever form, whether of literature, of art, of institutions, that mind is inscribed.

Books are the best type of the influence of the past, and perhaps we shall get at the truth,—learn the amount of this influence more conveniently,—by considering their value alone.

The theory of books is noble. The scholar of the first age received into him the world around; brooded thereon; gave it the new arrangement of his own mind, and uttered it again. It came into him, life; it went out from him, truth. It came to him, short-lived actions; it went out from him, immortal thoughts. It came to him, business; it went from him, poetry. It was dead fact; now, it is quick thought. It can stand, and it can go. It now endures, it now flies, it now inspires. Precisely in proportion to the depth of mind from which it issued, so high does it soar, so long does it sing.

Or, I might say, it depends on how far the process had gone, of transmuting life into truth. In proportion to the completeness of the distillation, so will the purity and imperishableness of the product be. But none is quite perfect. As no air-pump can by any means make a perfect vacuum, so neither can any artist entirely exclude the conventional, the local, the perishable, from his book, or write a book of pure thought, that shall be as efficient, in all respects, to a remote posterity, as to contemporaries, or rather to the second age. Each age, it is found, must write its own books; or rather, each generation for the next succeeding. The books of an older period will not fit this.

Yet hence arises a grave mischief. The sacredness which attaches to the act of creation,—the act of thought,—is transferred to the record. The poet chanting, was felt to be a divine man: henceforth the chant is divine also. The writer was a just and wise spirit: henceforward it is settled, the book is perfect; as love of the hero corrupts into worship of his statue. Instantly, the book becomes noxious: the guide is a tyrant. The sluggish and perverted mind of the multitude, slow to open to the incursions of Reason, having once so opened, having once received this book, stands upon it, and makes an outcry, if it is disparaged. Colleges are built on it. Books are written on it by thinkers, not by Man Thinking; by men of talent, that is, who start wrong, who set out from accepted dogmas, not from their own sight of principles. Meek young men grow up in libraries, believing it their duty to accept the views, which Cicero, which Locke, which Bacon, have given; forgetful that Cicero, Locke, and Bacon were only young men in libraries, when they wrote these books.

Hence, instead of Man Thinking, we have the bookworm. Hence, the book-learned class, who value books, as such; not as related to nature and the human constitution, but as making a sort of Third Estate with the world and the soul. Hence,

the restorers of readings, the emendators, the bibliomaniacs of all degrees.

Books are the best of things, well used; abused, among the worst. What is the right use? What is the one end, which all means go to effect? They are for nothing but to inspire. I had better never see a book, than to be warped by its attraction clean out of my own orbit and made a satellite instead of a system. The one thing in the world, of value, is the active soul. This every man is entitled to: this every man contains within him, although, in almost all men, obstructed, and as yet unborn. The soul active sees absolute truth; and utters truth, or creates. In this action, it is genius; not the privilege of here and there a favourite, but the sound estate of every man. In its essence, it is progressive. The book, the college, the school of art, the institution of any kind, stop with some past utterance of genius. This is good, say they,—let us hold by this. They pin me down. They look backward and not forward. But genius looks forward: the eyes of man are set in his forehead, not in his hindhead: man hopes: genius creates. Whatever talents may be, if the man create not, the pure efflux of the Deity is not his;—cinders and smoke there may be, but not yet flame. There are creative manners, there are creative actions, and creative words; manners, actions, words, that is, indicative of no custom or authority, but springing spontaneous from the mind's own sense of good and fair.

On the other part, instead of being its own seer, let it receive from another mind its truth, though it were in torrents of light, without periods of solitude, inquest, and self-recovery, and a fatal disservice is done. Genius is always sufficiently the enemy of genius by over-influence. The literature of every nation bear me witness. The English dramatic poets have Shakespearized now for two hundred years.

Undoubtedly there is a right way of reading, so it be sternly subordinated. Man Thinking must not be subdued by his instruments. Books are for the scholar's idle times. When he can read God directly, the hour is too precious to be wasted in other men's transcripts of their readings. But when the intervals of darkness come, as come they must,—when the sun is hid, and the stars withdraw their shining,—we repair to the lamps which were kindled by their ray, to guide our steps to the East again, where the dawn is. We hear, that we may speak. The Arabian proverb says, "A fig tree, looking on a fig tree, becometh fruitful."

It is remarkable, the character of the pleasure we derive from the best books. They impress us with the conviction, that one nature wrote and the same reads. We read the

verses of one of the great English poets, of Chancer, of Marvell, of Dryden, with the most modern joy,—with a pleasure, I mean, which is in great part caused by the abstraction of all *time* from their verses. There is some awe mixed with the joy of our surprise, when this poet, who lived in some past world, two or three hundred years ago, says that which lies close to my own soul, that which I also had well-nigh thought and said. But for the evidence thence afforded to the philosophical doctrine of the identity of all minds, we should suppose some pre-established harmony, some foresight of souls that were to be, and some preparation of stores for their future wants, like the fact observed in insects, who lay up food before death for the young grub they shall never see.

I would not be hurried by any love of system, by any exaggeration of instincts, to underrate the Book. We all know, that, as the human body can be nourished on any food, though it were boiled grass and the broth of shoes, so the human mind can be fed by any knowledge. And great and heroic men have existed, who had almost no other information than by the printed page. I only would say, that it needs a strong head to bear that diet. One must be an inventor to read well. As the proverb says, "He that would bring home the wealth of the Indies, must carry out the wealth of the Indies." There is then creative reading as well as creative writing. When the mind is braced by labour and invention, the page of whatever book we read becomes luminous with manifold allusion. Every sentence is doubly significant, and the sense of our author is as broad as the world. We then see, what is always true, that, as the seer's hour of vision is short and rare among heavy days and months, so is its record, perchance, the least part of his volume. The discerning will read, in his Plato or Shakespeare, only that least part,—only the authentic utterances of the oracle;—all the rest he rejects, were it never so many times Plato's and Shakespeare's.

Of course, there is a portion of reading quite indispensable to a wise man. History and exact science he must learn by laborious reading. Colleges, in like manner, have their indispensable office,—to teach elements. But they can only highly serve us, when they aim not to drill, but to create; when they gather from far every ray of various genius to their hospitable halls, and, by the concentrated fires, set the hearts of their youth on flame. Thought and knowledge are natures in which apparatus and pretension avail nothing. Gowns, and pecuniary foundations, though of towns of gold, can never countervail the least sentence or syllable of wit. Forget this, and our American colleges will recede in their public importance, whilst they grow richer every year.

III. There goes in the world a notion, that the scholar should be a recluse, a valetudinarian,—as unfit for any handiwork or public labour, as a penknife for an axe. The so-called “practical men” sneer at speculative men, as if, because they speculate or *see*, they could do nothing. I have heard it said that the clergy,—who are always, more universally than any other class, the scholars of their day,—are addressed as women; that the rough, spontaneous conversation of men they do not hear, but only a mincing and diluted speech. They are often virtually disfranchised; and, indeed, there are advocates for their celibacy. As far as this is true of the studious classes, it is not just and wise. Action is with the scholar subordinate, but it is essential. Without it, he is not yet man. Without it, thought can never ripen into truth. Whilst the world hangs before the eye as a cloud of beauty, we cannot even see its beauty. Inaction is cowardice, but there can be no scholar without the heroic mind. The preamble of thought, the transition through which it passes from the unconscious to the conscious, is action. Only so much do I know, as I have lived. Instantly we know whose words are loaded with life, and whose not.

The world,—this shadow of the soul, or *other me*, lies wide around. Its attractions are the keys which unlock my thoughts and make me acquainted with myself. I run eagerly into this resounding tumult. I grasp the hands of those next me, and take my place in the ring to suffer and to work, taught by an instinct, that so shall the dumb abyss be vocal with speech. I pierce its order; I dissipate its fear; I dispose of it within the circuit of my expanding life. So much only of life as I know by experience, so much of the wilderness have I vanquished and planted, or so far have I extended my being, my dominion. I do not see how any man can afford, for the sake of his nerves and his nap, to spare any action in which he can partake. It is pearls and rubies to his discourse. Drudgery, calamity, exasperation, want, are instructors in eloquence and wisdom. The true scholar grudges every opportunity of action passed by, as a loss of power.

It is the raw material out of which the intellect moulds her splendid products. A strange process too, this, by which experience is converted into thought, as a mulberry leaf is converted into satin. The manufacture goes forward at all hours.

The actions and events of our childhood and youth, are now matters of calmest observation. They lie like fair pictures in the air. Not so with our recent actions,—with the business which we now have in hand. On this we are quite unable to speculate. Our affections as yet circulate through it. We no more feel or know it, than we feel the feet, or the hand, or the

brain of our body. The new deed is yet a part of life,—remains for a time immersed in our unconscious life. In some rontemplative hour, it detaches itself from the life like a ripe fruit, to become a thought of the mind. Instantly, it is raised, transfigured; the corruptible has put on incorruption. Henceforth it is an object of beauty, however base its origin and neighbourhood. Observe, too, the impossibility of antedating this act. In its grub state, it cannot fly, it cannot shine, it is a dull grub. But suddenly, without observation, the selfsame thing unfurls beautiful wings, and is an angel of wisdom. So is there no fact, no event, in our private history, which shall not, sooner or later, lose its adhesive, inert form, and astonish us by soaring from our body into the empyrean. Cradle and infancy, school and playground, the fear of boys, and dogs, and ferules, the love of little maids and berries, and many another fact that once filled the whole sky, are gone already; friend and relative, profession and party, town and country, nation and world, must also soar and sing.

Of course, he who has put forth his total strength in fit actions, has the richest return of wisdom. I will not shut myself out of this globe of action, and transplant an oak into a flower-pot, there to hunger and pine; nor trust the revenue of some single faculty, and exhaust one vein of thought, much like those Savoyards, who, getting their livelihood by carving shepherds, shepherdesses, and smoking Dutchmen, for all Europe, went out one day to the mountain to find stock, and discovered that they had whittled up the last of their pine-trees. Authors we have, in numbers, who have written out their vein, and who, moved by a commendable prudence, sail for Greece or Palestine, follow the trapper into the prairie, or ramble round Algiers, to replenish their merchantable stock.

If it were only for a vocabulary, the scholar would be covetous of action. Life is our dictionary. Years are well spent in country labours; in town,—in the insight into trades and manufactories; in frank intercourse with many men and women; in science; in art; to the one end of mastering in all their facts a language by which to illustrate and embody our perceptions. I learn immediately from any speaker how much he has already lived, through the poverty or the splendour of his speech. Life lies behind us as the quarry from whence we get tiles and cope-stones for the masonry of to-day. This is the way to learn grammar. Colleges and books only copy the language which the field and the work-yard made.

But the final value of action, like that of books, and better than books, is, that it is a resource. That great principle of Undulation in nature, that shows itself in the inspiring and expiring of the breath; in desire and satiety; in the ebb and

flow of the sea; in day and night; in heat and cold; and as yet more deeply ingrained in every atom and every fluid, is known to us under the name of Polarity,—these “fits of easy transmission and reflection,” as Newton called them, are the law of nature because they are the law of spirit.

The mind now thinks; now acts; and each fit reproduces the other. When the artist has exhausted his materials, when the fancy no longer paints, when thoughts are no longer apprehended, and books are a weariness,—he has always the resource *to live*. Character is higher than intellect. Thinking is the function. Living is the functionary. The stream retreats to its source. A great soul will be strong to live, as well as strong to think. Does he lack organ or medium to impart his truth? He can still fall back on this elemental force of living them. This is a total act. Thinking is a partial act. Let the grandeur of justice shine in his affairs. Let the beauty of affection cheer his lowly roof. Those “far from fame,” who dwell and act with him, will feel the force of his constitution in the doings and passages of the day better than it can be measured by any public and designed display. Time shall teach him, that the scholar loses no hour which the man lives. Herein he unfolds the sacred germ of his instinct, screened from influence. What is lost in seemliness is gained in strength. Not out of those, on whom systems of education have exhausted their culture, comes the helpful giant to destroy the old or to build the new, but out of unhandselled savage nature, out of terrible Druids and Berserkirs, come at last Alfred and Shakespeare.

I hear therefore with joy whatever is beginning to be said of the dignity and necessity of labour to every citizen. There is virtue yet in the hoe and the spade, for learned as well as for unlearned hands. And labour is everywhere welcome, always we are invited to work; only be this limitation observed, that a man shall not for the sake of wider activity sacrifice any opinion to the popular judgments and modes of action.

I have now spoken of the education of the scholar by nature, by books, and by action. It remains to say somewhat of his duties.

They are such as become Man Thinking. They may all be comprised in self-trust. The office of the scholar is to cheer, to raise, and to guide men by showing them facts amidst appearances. He plies the slow, unhonoured, and unpaid task of observation. Flamsteed and Herschel, in their glazed observatories, may catalogue the stars with the praise of all men, and, the results being splendid and useful, honour is sure.

But he, in his private observatory, cataloguing obscure and nebulous stars of the human mind, which as yet no man has thought of as such,—watching days and months, sometimes, for a few facts; correcting still his old records;—must relinquish display and immediate fame. In the long period of his preparation, he must betray often an ignorance and shiftlessness in popular arts, incurring the disdain of the able who shoulder him aside. Long he must stammer in his speech; often forego the living for the dead. Worse yet, he must accept,—how often! poverty and solitude. For the ease and pleasure of treading the old road, accepting the fashions, the education, the religion of society, he takes the cross of making his own, and, of course, the self-accusation, the faint heart, the frequent uncertainty and loss of time, which are the nettles and tangling vines in the way of the self-relying and self-directed; and the state of virtual hostility in which he seems to stand to society, and especially to educated society. For all this loss and scorn, what offset? He is to find consolation in exercising the highest functions of human nature. He is one, who raises himself from private considerations, and breathes and lives on public and illustrious thoughts. He is the world's eye. He is the world's heart. He is to resist the vulgar prosperity that retrogrades ever to barbarism, by preserving and communicating heroic sentiments, noble biographies, melodious verse, and the conclusions of history. Whatsoever oracles the human heart, in all emergencies, in all solemn hours, has uttered as its commentary on the world of actions,—these he shall receive and impart. And whatsoever new verdict Reason from her inviolable seat pronounces on the passing men and events of to-day,—this he shall hear and promulgate.

These being his functions, it becomes him to feel all confidence in himself, and to defer never to the popular cry. He and he only knows the world. The world of any moment is the merest appearance. Some great decorum, some fetish of a government, some ephemeral trade, or war, or man, is cried up by half mankind and cried down by the other half, as if all depended on this particular up or down. The odds are that the whole question is not worth the poorest thought which the scholar has lost in listening to the controversy. Let him not quit his belief that a popgun is a popgun, though the ancient and honourable of the earth affirm it to be the crack of doom. In silence, in steadiness, in severe abstraction, let him hold by himself; add observation to observation, patient of neglect, patient of reproach; and bide his own time,—happy enough, if he can satisfy himself alone, that this day he has seen something truly. Success treads on every right step. For the

instinct is sure, that prompts him to tell his brother what he thinks. He then learns, that in going down into the secrets of his own mind, he has descended into the secrets of all minds. He learns that he who has mastered any law in his private thoughts, is master to that extent of all men whose language he speaks, and of all into whose language his own can be translated. The poet, in utter solitude remembering his spontaneous thoughts and recording them, is found to have recorded that, which men in crowded cities find true for them also. The orator distrusts at first the fitness of his frank confessions,—his want of knowledge of the persons he addresses,—until he finds that he is the complement of his hearers;—that they drink his words because he fulfils for them their own nature; the deeper he dives into his privatest, secretest presentiment, to his wonder he finds, this is the most acceptable, most public, and universally true. The people delight in it; the better part of every man feels, This is my music; this is myself.

In self-trust, all the virtues are comprehended. Free should the scholar be,—free and brave. Free even to the definition of freedom, “without any hindrance that does not arise out of his own constitution.” Brave; for fear is a thing, which a scholar by his very function puts behind him. Fear always springs from ignorance. It is a shame to him if his tranquillity, amid dangerous times, arise from the presumption, that, like children and women, his is a protected class; or if he seek a temporary peace by the diversion of his thoughts from politics or vexed questions, hiding his head like an ostrich in the flowering bushes, peeping into microscopes, and turning rhymes, as a boy whistles to keep his courage up. So is the danger a danger still; so is the fear worse. Manlike let him turn and face it. Let him look into its eye and search its nature, inspect its origin—see the whelping of this lion—which lies no great way back; he will then find in himself a perfect comprehension of its nature and extent; he will have made his hands meet on the other side, and can henceforth defy it, and pass on superior. The world is his, who can see through its pretension. What deafness, what stone-blind custom, what overgrown error you behold, is there only by sufferance—by your sufferance. See it to be a lie, and you have already dealt it its mortal blow.

Yes, we are the cowed—we the trustless. It is a mischievous notion that we are come late into nature; that the world was finished a long time ago. As the world was plastic and fluid in the hands of God, so it is ever to so much of his attributes as we bring to it. To ignorance and sin, it is flint. They adapt themselves to it as they may; but in proportion as a man has any thing in him divine, the firmament flows before

him and takes his signet and form. Not he is great who can alter matter, but he who can alter my state of mind. They are the kings of the world who give the colour of their present thought to all nature and all art, and persuade men by the cheerful serenity of their carrying the matter, that this thing which they do, is the apple which the ages have desired to pluck, now at last ripe, and inviting nations to the harvest. The great man makes the great thing. Wherever Macdonald sits, there is the head of the table. Linnæus makes botany the most alluring of studies, and wins it from the farmer and the herb-woman; Davy, chemistry; and Cuvier, fossils. The day is always his, who works in it with serenity and great aims. The unstable estimates of men crowd to him whose mind is filled with a truth, as the heaped waves of the Atlantic follow the moon.

For this self-trust, the reason is deeper than can be fathomed—darker than can be enlightened. I might not carry with me the feeling of my audience in stating my own belief. But I have already shown the ground of my hope, in adverting to the doctrine that man is one. I believe man has been wronged; he has wronged himself. He has almost lost the light, that can lead him back to his prerogatives. Men are become of no account. Men in history, men in the world of to-day are bugs, are spawn, and are called "the mass" and "the herd." In a century, in a millennium, one or two men; that is to say—one or two approximations to the right state of every man. All the rest behold in the hero or the poet their own green and crude being—ripened; yes, and are content to be less, so that may attain to its full stature. What a testimony—full of grandeur, full of pity, is borne to the demands of his own nature, by the poor clansman, the poor partisan, who rejoices in the glory of his chief. The poor and the low find some amends to their immense moral capacity, for their acquiescence in a political and social inferiority. They are content to be brushed like flies from the path of a great person, so that justice shall be done by him to that common nature which it is the dearest desire of all to see enlarged and glorified. They sun themselves in the great man's light, and feel it to be their own element. They cast the dignity of man from their downtrodden selves upon the shoulders of a hero, and will perish to add one drop of blood to make that great heart beat, those giant sinews combat and conquer. He lives for us, and we live in him.

Men such as they are, very naturally seek money or power; and power because it is as good as money—the "spoils," so called, "of office." And why not? for they aspire to the highest, and this, in their sleep-walking, they dream is highest.

Wake them, and they shall quit the false good, and leap to the true, and leave governments to clerks and desks. This revolution is to be wrought by the gradual domestication of the idea of Culture. The main enterprise of the world for splendour, for extent, is the upbuilding of a man. Here are the materials strewn along the ground. The private life of one man shall be a more illustrious monarchy—more formidable to its enemy, more sweet and serene in its influence to its friend, than any kingdom in history. For a man, rightly viewed, comprehendeth the particular natures of all men. Each philosopher, each bard, each actor, has only done for me, as by a delegate, what one day I can do for myself. The books which once we valued more than the apple of the eye, we have quite exhausted. What is that but saying, that we have come up with the point of view which the universal mind took through the eyes of one scribe; we have been that man, and have passed on. First, one; then, another; we drain all cisterns, and waxing greater by all these supplies, we crave a better and more abundant food. The man has never lived that can feed us ever. The human mind cannot be enshrined in a person, who shall set a barrier on any one side to this unbounded, unboundable empire. It is one central fire, which, flaming now out of the lips of Etna, lightens the capes of Sicily; and, now out of the throat of Vesuvius, illuminates the towers and vineyards of Naples. It is one light which beams out of a thousand stars. It is one soul which animates all men.

But I have dwelt perhaps tediously upon this abstraction of the Scholar. I ought not to delay longer to add what I have to say, of nearer reference to the time and to this country.

Historically, there is thought to be a difference in the ideas which predominate over successive epochs, and there are data for marking the genius of the Classic, of the Romantic, and now of the Reflective or Philosophical age. With the views I have intimated of the oneness or the identity of the mind through all individuals, I do not much dwell on these differences. In fact, I believe each individual passes through all three. The boy is a Greek; the youth, romantic; the adult, reflective. I deny not, however, that a revolution, in the leading idea may be distinctly enough traced.

Our age is bewailed as the age of Introversion. Must that needs be evil? We, it seems, are critical; we are embarrassed with second thoughts; we cannot enjoy anything for hankering to know whereof the pleasure consists; we are lined with eyes; we see with our feet; the time is infected with Hamlet's unhappiness,—

"Sicklied o'er with the pale cast of thought,"

Is it so bad then? Sight is the last thing to be pitied. Would we be blind? Do we fear lest we should outsee nature and God, and drink truth dry? I look upon the discontent of the literary class, as a mere announcement of the fact, that they find themselves not in the state of mind of their fathers, and regret the coming state as untried; as a boy dreads the water before he has learned that he can swim. If there is any period one would desire to be born in—is it not the age of Revolution; when the old and the new stand side by side, and admit of being compared; when the energies of all men are searched by fear and by hope; when the historic glories of the old, can be compensated by the rich possibilities of the new era? This time, like all times, is a very good one, if we but know what to do with it.

I read with some joy of the auspicious signs of the coming days, as they glimmer already through poetry and art, through philosophy and science, through church and state.

One of these signs is the fact, that the same movement which effected the elevation of what was called the lowest class in the state, assumed in literature a very marked and as benign an aspect. Instead of the sublime and beautiful, the near, the low, the common, was explored and poetized. That which had been negligently trodden under foot by those who were harnessing and provisioning themselves for long journeys into far countries, is suddenly found to be richer than all foreign parts. The literature of the poor, the feelings of the child, the philosophy of the street, the meaning of household life, are the topics of the time. It is a great stride. It is a sign—is it not? of new vigour, when the extremities are made active, when the currents of warm life run into the hands and the feet. I ask not for the great, the remote, the romantic; what is doing in Italy or Arabia; what is Greek art, or Provençal minstrelsy; I embrace the common, I explore and sit at the feet of the familiar, the low. Give me insight into to-day, and you may have the antique and future worlds. What would we really know the meaning of? The meal in the firkin; the milk in the pan; the ballad in the street; the news of the boat; the glance of the eye; the form and the gait of the body; show me the ultimate reason of these matters; show me the sublime presence of the highest spiritual cause lurking, as always it does lurk, in these suburbs and extremities of nature; let me see every trifle bristling with the polarity that ranges it instantly on an eternal law; and the shop, the plough, and the ledger, referred to the like cause by which light undulates and poets sing; and the world lies no longer a dull miscellany and lumber-room, but has form and order; there is no trifle; there is no

puzzle; but one design unites and animates the furthest pinnacle and the lowest trench.

This idea has inspired the genius of Goldsmith, Burns, Cowper, and, in a newer time, of Goethe, Wordsworth, and Carlyle. This idea they have differently followed and with various success. In contrast with their writing, the style of Pope, of Johnson, of Gibbon, looks cold and pedantic. This writing is blood-warm. Man is surprised to find that things near are not less beautiful and wondrous than things remote. The near explains the far. The drop is a small ocean. A man is related to all nature. This perception of the worth of the vulgar is fruitful in discoveries. Goethe, in this very thing the most modern of the moderns, has shown us, as none ever did, the genius of the ancients.

There is one man of genius, who has done much for this philosophy of life, whose literary value has never yet been rightly estimated;—I mean Emanuel Swedenborg. The most imaginative of men, yet writing with the precision of a mathematician, he endeavoured to engraft a purely philosophical Ethics on the popular Christianity of his time. Such an attempt, of course, must have difficulty, which no genius could surmount. But he saw and showed the connection between nature and the affections of the soul. He pierced the emblematic or spiritual character of the visible, audible, tangible world. Especially did his shade-loving muse hover over and interpret the lower parts of nature; he showed the mysterious bond that allies moral evil to the foul material forms, and has given in epical parables a theory of insanity, of beasts, of unclean and fearful things.

Another sign of our times, also marked by an analogous political movement, is, the new importance given to the single person. Every thing that tends to insulate the individual—to surround him with barriers of natural respect, so that each man shall feel the world is his, and man shall treat with man as a sovereign state with a sovereign state;—tends to true union as well as greatness. "I learned," said the melancholy Pestalozzi, "that no man in God's wide earth is either willing or able to help any other man." Help must come from the bosom alone. The scholar is that man who must take up into himself all the ability of the time, all the contributions of the past, all the hopes of the future. He must be an university of knowledges. If there be one lesson more than another, which should pierce his ear, it is, The world is nothing, the man is all; in yourself is the law of all nature, and you know not yet how a globule of sap ascends; in yourself slumbers the whole of Reason; it is for you to know all, it is for you to dare all.

Mr. President and Gentlemen, this confidence in the un-

searched might of man belongs, by all motives, by all prophecy, by all preparation, to the American Scholar. We have listened too long to the courtly muses of Europe. The spirit of the American freeman is already suspected to be timid, imitative, tame. Public and private avarice make the air we breathe thick and fat. The scholar is decent, indolent, complaisant. See already the tragic consequence. The mind of this country, taught to aim at low objects, eats upon itself. There is no work for any but the decorous and the complaisant. Young men of the fairest promise, who begin life upon our shores, inflated by the mountain winds, shined upon by all the stars of God, find the earth below not in unison with these—but are hindered from action by the disgust which the principles on which business is managed inspire, and turn drudges, or die of disgust—some of them suicides. What is the remedy? They did not yet see, and thousands of young men as hopeful now crowding to the barriers for the career, do not yet see, that, if the single man plant himself indomitably on his instincts, and there abide, the huge world will come round to him. Patience—patience;—with the shades of all the good and great for company; and for solace, the perspective of your own infinite life; and for work, the study and the communication of principles, the making those instincts prevalent, the conversion of the world. Is it not the chief disgrace in the world, not to be an unit;—not to be reckoned one character;—not to yield that peculiar fruit which each man was created to bear, but to be reckoned in the gross, in the hundred, or the thousand, of the party, the section, to which we belong; and our opinion predicted geographically, as the north, or the south? Not so, brothers and friends—please God, ours shall not be so. We will walk on our own feet; we will work with our own hands; we will speak our own minds. The study of letters shall be no longer a name for pity, for doubt, and for sensual indulgence. The dread of man and the love of man shall be a wall of defence and a wreath of joy around all. A nation of men will for the first time exist, because each believes himself inspired by the Divine Soul which also inspires all men.

AN ADDRESS

DELIVERED BEFORE THE SENIOR CLASS IN DIVINITY COLLEGE,
CAMBRIDGE, SUNDAY EVENING, JULY 15, 1838.

IN this refulgent summer, it has been a luxury to draw the breath of life. The grass grows, the buds burst, the meadow is spotted with fire and gold in the tint of flowers. The air is full of birds, and sweet with the breath of the pine, the balm-of-Gilead, and the new hay. Night brings no gloom to the heart with its welcome shade. Through the transparent darkness the stars pour their almost spiritual rays. Man under them seems a young child, and his huge globe a toy. The cool night bathes the world as with a river, and prepares his eyes again for the crimson dawn. The mystery of nature was never displayed more happily. The corn and the wine have been freely dealt to all creatures, and the never-broken silence with which the old bounty goes forward, has not yielded yet one word of explanation. One is constrained to respect the perfection of this world, in which our senses converse. How wide; how rich; what invitation from every property it gives to every faculty of man! In its fruitful soils; in its navigable sea; in its mountains of metal and stone; in its forests of all woods; in its animals; in its chemical ingredients; in the powers and path of light, heat, attraction, and life, it is well worth the pith and heart of great men to subdue and enjoy it. The planters, the mechanics, the inventors, the astronomers, the builders of cities, and the captains, history delights to honour.

But when the mind opens, and reveals the laws which traverse the universe, and make things what they are, then shrinks the great world at once into a mere illustration and fable of this mind. What am I? and What is? asks the human spirit with a curiosity new-kindled, but never to be quenched. Behold these out-running laws, which our imperfect apprehension can see tend this way and that, but not come full circle. Behold these infinite relations, so like, so unlike; many, yet one. I would study, I would know, I would admire for ever. These works of thought have been the entertainments of the human spirit in all ages.

A more secret, sweet, and overpowering beauty appears to man when his heart and mind open to the sentiment of virtue. Then he is instructed in what is above him. He learns that his being is without bound; that, to the good, to the perfect, he is born, low as he now lies in evil and weakness. That which he venerates is still his own, though he has not realized

it yet. *He ought.* He knows the sense of that grand word, though his analysis fails to render account of it. When in innocency, or when by intellectual perception, he attains to say—"I love the Right; Truth is beautiful within and without for evermore. Virtue, I am thine: save me: use me: thee will I serve, day and night, in great, in small, that I may be not virtuous, but virtue;"—then is the end of the creation answered, and God is well pleased.

The sentiment of virtue is a reverence and delight in the presence of certain divine laws. It perceives that this homely game of life we play, covers, under what seem foolish details, principles that astonish. The child amidst his baubles, is learning the action of light, motion, gravity, muscular force; and in the game of human life, love, fear, justice, appetite, man, and God, interact. These laws refuse to be adequately stated. They will not be written out on paper, or spoken by the tongue. They elude our persevering thought; yet we read them hourly in each other's faces, in each other's actions, in our own remorse. The moral traits which are all globed into every virtuous act and thought—in speech, we must sever, and describe or suggest by painful enumeration of many particulars. Yet, as this sentiment is the essence of all religion, let me guide your eye to the precise objects of the sentiment, by an enumeration of some of those classes of facts in which this element is conspicuous.

The intuition of the moral sentiment is an insight of the perfection of the laws of the soul. These laws execute themselves. They are out of time, out of space, and not subject to circumstance. Thus; in the soul of man there is a justice whose retributions are instant and entire. He who does a good deed, is instantly ennobled. He who does a mean deed, is by the action itself contracted. He who puts off impurity, thereby puts on purity. If a man is at heart just, then in so far is he God; the safety of God, the immortality of God, the majesty of God, do enter into that man with justice. If a man dissemble, deceive, he deceives himself, and goes out of acquaintance with his own being. A man in the view of absolute goodness, adores, with total humanity. Every step so downward, is a step upward. The man who renounces himself, comes to himself.

See how this rapid intrinsic energy worketh everywhere, righting wrongs, correcting appearances, and bringing up facts to a harmony with thoughts. Its operation in life, though slow to the senses, is, at last, as sure as in the soul. By it, a man is made the Providence to himself, dispensing good to his goodness, and evil to his sin. Character is always known. Thefts never enrich; alms never impoverish; murder will

speaking out of stone walls. The least admixture of a lie—for example, the taint of vanity, any attempt to make a good impression, a favourable appearance—will instantly vitiate the effect. But speak the truth, and all nature and all spirits help you with unexpected furtherance. Speak the truth, and all things alive or brute are vouchers, and the very roots of the grass underground there, do seem to stir and move to bear you witness. See again the perfection of the Law as it applies itself to the affections, and becomes the law of society. As we are, so we associate. The good, by affinity, seek the good; the vile, by affinity, the vile. Thus of their own volition, souls proceed into heaven, into hell.

These facts have always suggested to man the sublime creed, that the world is not the product of manifold power, but of one will, of one mind; and that one mind is everywhere active, in each ray of the star, in each wavelet of the pool; and whatever opposes that will, is everywhere baulked and baffled, because things are made so, and not otherwise. Good is positive. Evil is merely privative, not absolute: it is like cold, which is the privation of heat. All evil is so much death or nonentity. Benevolence is absolute and real. So much benevolence as a man hath, so much life hath he. For all things proceed out of this same spirit, which is differently named love, justice, temperance, in its different applications, just as the ocean receives different names on the several shores which it washes. All things proceed out of the same spirit, and all things conspire with it. Whilst a man seeks good ends, he is strong by the whole strength of nature. In so far as he roves from these ends, he bereaves himself of power, or auxiliaries; his being shrinks out of all remote channels, he becomes less and less, a mote, a point, until absolute badness is absolute death.

The perception of this law of laws awakens in the mind a sentiment which we call the religious sentiment, and which makes our highest happiness. Wonderful is its power to charm and to command. It is a mountain air. It is the embalmer of the world. It is myrrh and storax, and chlorine and rosemary. It makes the sky and the hills sublime, and the silent song of the stars is it. By it, is the universe made safe and habitable, not by science or power. Thought may work cold and intransitive in things, and find no end or unity; but the dawn of the sentiment of virtue on the heart, gives and is the assurance that Law is sovereign over all natures; and the worlds, time, space, eternity, do seem to break out into joy.

This sentiment is divine and deifying. It is the beatitude of man. It makes him illimitable. Through it, the soul first knows itself. It corrects the capital mistake of the infant

man, who seeks to be great by following the great, and hopes to derive advantages *from another*,—by showing the fountain of all good to be in himself, and that he, equally with every man, is an inlet into the deeps of Reason. When he says, "I ought;" when love warms him; when he chooses, warned from on high, the good and great deed; then, deep melodies wander through his soul from Supreme Wisdom.—Then he can worship, and be enlarged by his worship; for he can never go behind this sentiment. In the sublimest flights of the soul, rectitude is never surmounted, love is never outgrown.

This sentiment lies at the foundation of society, and successively creates all forms of worship. The principle of veneration never dies out. Man fallen into superstition, into sensuality, is never quite without the visions of the moral sentiment. In like manner, all the expressions of this sentiment are sacred and permanent in proportion to their purity. The expressions of this sentiment affect us more than all other compositions. The sentences of the oldest time, which ejaculate this piety, are still fresh and fragrant. This thought dwelled always deepest in the minds of men in the devout and contemplative East; not alone in Palestine, where it reached its purest expression, but in Egypt, in Persia, in India, in China. Europe has always owed to oriental genius its divine impulses. What these holy bards said, all sane men found agreeable and true. And the unique impression of Jesus upon mankind, whose name is not so much written as ploughed into the history of this world, is proof of the subtle virtue of this infusion.

Meantime, whilst the doors of the temple stand open, night and day, before every man, and the oracles of this truth cease never, it is guarded by one stern condition; this, namely; it is an intuition. It cannot be received at second hand. Truly speaking, it is not instruction, but provocation, that I can receive from another soul. What he announces, I must find true in me, or reject; and on his word, or as his second, be he who he may, I can accept nothing. On the contrary, the absence of this primary faith is the presence of degradation. As is the flood so is the ebb. Let this faith depart, and the very words it spake, and the things it made, become false and hurtful. Then falls the church, the state, art, letters, life. The doctrine of the divine nature being forgotten, a sickness infects and dwarfs the constitution. Once man was all; now he is an appendage, a nuisance. And because the indwelling Supreme Spirit cannot wholly be got rid of, the doctrine of it suffers this perversion, that the divine nature is attributed to one or two persons, and denied to all the rest, and denied with fury. The doctrine of inspiration is lost; the base doctrine

of the majority of voices, usurps the place of the doctrine of the soul. Miracles, prophecy, poetry; the ideal life, the holy life, exist as ancient history merely; they are not in the belief, nor in the aspiration of society; but, when suggested, seem ridiculous. Life is comic or pitiful, as soon as the high ends of being fade out of sight, and man becomes near-sighted, and can only attend to what addresses the senses.

These general views, which, whilst they are general, none will contest, find abundant illustration in the history of religion, and especially in the history of the Christian church. In that, all of us have had our birth and nurture. The truth contained in that, you, my young friends, are now setting forth to teach. As the Cultus, or established worship of the civilized world, it has great historical interest for us. Of its blessed words, which have been the consolation of humanity, you need not that I should speak. I shall endeavour to discharge my duty to you, on this occasion, by pointing out two errors in its administration, which daily appear more gross from the point of view we have just now taken.

Jesus Christ belonged to the true race of prophets. He saw with open eye the mystery of the soul. Drawn by its severe harmony, ravished with its beauty, he lived in it, and had his being there. Alone in all history, he estimated the greatness of man. One man was true to what is in you and me. He saw that God incarnates himself in man, and evermore goes forth anew to take possession of his world. He said, in this jubilee of sublime emotion, 'I am divine. Through me, God acts; through me, speaks. Would you see God, see me; or, see thee, when thou also thinkest as I now think.' But what a distortion did his doctrine and memory suffer in the same, in the next, and the following ages! There is no doctrine of the Reason which will bear to be taught by the Understanding. The understanding caught this high chant from the poet's lips, and said in the next age, 'This was Jehovah come down out of heaven. I will kill you, if you say he was a man.' The idioms of his language, and the figures of his rhetoric, have usurped the place of his truth; and churches are not built on his principles, but on his tropes. Christianity became a Mythus, as the poetic teaching of Greece and of Egypt before. He spoke of miracles; for he felt that man's life was a miracle, and all that man doth, and he knew that this daily miracle shines, as the character ascends. But the word Miracle, as pronounced by Christian churches, gives a false impression; it is Monster. It is not one with the blowing clover and the falling rain.

He felt respect for Moses and the prophets; but no unfit tenderness at postponing their initial revelations, to the hour

and the man that law is; to the eternal revelation in the heart. Thus was he a true man. Having seen that the law in us is commanding, he would not suffer it to be commanded. Boldly, with hard, and heart, and life, he declared it was God. Thus is he, as I think, the only soul in history who has appreciated the worth of man.

1. In this point of view we become sensible of the first defect of historical Christianity. Historical Christianity has fallen into the error that corrupts all attempts to communicate religion. As it appears to us, and as it has appeared for ages, it is not the doctrine of the soul, but an exaggeration of the personal, the positive, the ritual. It has dwelt, it dwells, with noxious exaggeration about the *person* of Jesus. The soul knows no persons. It invites every man to expand to the full circle of the universe, and will have no preferences but those of spontaneous love. But by this eastern monarchy of a Christianity, which indolence and fear have built, the friend of man is made the injurer of man. The manner in which his name is surrounded with expressions, which were once sallies of admiration and love, but are now petrified into official titles, kills all generous sympathy and liking. All who hear me, feel, that the language that describes Christ to Europe and America, is not the style of friendship and enthusiasm to a good and noble heart, but is appropriated and formal—paints a demigod as the Orientals or the Greeks would describe Osiris or Apollo. Accept the injurious impositions of our early catechetical instruction, and even honesty and self-denial were but splendid sins, if they did not wear the Christian name. One would rather be

‘A pagan, suckled in a creed outworn,’

than to be defrauded of his manly right in coming into nature, and finding not names and places, not land and professions, but even virtue and truth foreclosed and monopolized. You shall not be a man even. You shall not own the world; you shall not dare, and live after the infinite Law that is in you, and in company with the infinite Beauty which heaven and earth reflect to you in all lovely forms; but you must subordinate your nature to Christ's nature; you must accept our interpretations; and take his portrait as the vulgar draw it.

That is always best which gives me to myself. The sublime is excited in me by the great stoical doctrine, Obey thyself. That which shows God in me, fortifies me. That which shows God out of me, makes me a wart and a wen. There is no longer a necessary reason for my being. Already the long shadows of untimely oblivion creep over me, and I shall de cease for ever.

The divine bards are the friends of my virtue, of my intellect, of my strength. They admonish me, that the gleams which flash across my mind, are not mine, but God's; that they had the like, and were not disobedient to the heavenly vision. So I love them. Noble provocations go out from them, inviting me to resist evil; to subdue the world; and to Be. And thus by his holy thoughts, Jesus serves us, and thus only. To aim to convert a man by miracles, is a profanation of the soul. A true conversion, a true Christ, is now, as always, to be made, by the reception of beautiful sentiments. It is true that a great and rich soul, like his, falling among the simple, does so preponderate, that, as his did, it names the world. The world seems to them to exist for him, and they have not yet drunk so deeply of his sense, as to see that only by coming again to themselves, or to God in themselves, can they grow for evermore. It is a low benefit to give me something; it is a high benefit to enable me to do somewhat of myself. The time is coming when all men will see, that the gift of God to the soul is not a vaunting, overpowering, excluding, sanctity, but a sweet, natural goodness, a goodness like thine and mine, and that so invites thine and mine to be and to grow.

The injustice of the vulgar tone of preaching is not less flagrant to Jesus, than to the souls which it profanes. The preachers do not see that they make his gospel not glad, and shear him of the locks of beauty and the attributes of heaven. When I see a majestic Epaminondas, or Washington; when I see among my contemporaries, a true orator, an upright judge, a dear friend; when I vibrate to the melody and fancy of a poem; I see beauty that is to be desired. And so lovely, and with yet more entire consent of my human being, sounds in my ear the severe music of the bards that have sung of the true God in all ages. Now do not degrade the life and dialogues of Christ out of the circle of this charm, by insulation and peculiarity. Let them lie as they befel, alive and warm, part of human life, and of the landscape, and of the cheerful day.

2. The second defect of the traditionary and limited way of using the mind of Christ is a consequence of the first; this, namely, that the Moral Nature, that Law of laws, whose revelations introduce greatness—yea, God himself, into the open soul, is not explored as the fountain of the established teaching in society. Men have come to speak of the revelation as somewhat long ago given and done, as if God were dead. The injury to faith throttles the preacher; and the goodliest of institutions becomes an uncertain and inarticulate voice.

It is very certain that it is the effect of conversation with the beauty of the soul, to begot a desire and need to impart to

is a sayer. Somehow his dream is told: somehow he publishes it with solemn joy: sometimes with pencil on canvas; sometimes with chisel on stone; sometimes in towers and aisles of granite, his soul's worship is builded; sometimes in anthems of indefinite music; but clearest and most permanent, in words.

The man enamoured of this excellency, becomes its priest or poet. The office is coeval with the world. But observe the condition, the spiritual limitation, of the office. The spirit only can teach. Not any profane man, not any sensual, not any liar, not any slave, can teach, but only he can give, who has; he only can create, who is. The man on whom the soul descends, through whom the soul speaks, alone can teach. Courage, piety, love, wisdom, can teach: and every man can open his door to these angels, and they shall bring him the gift of tongues. But the man who aims to speak as books enable, as synods use, as the fashion guides, and as interest commands, babbles. Let him hush.

To this holy office you propose to devote yourselves. I wish you may feel your call in throbs of desire and hope. The office is the first in the world. It is of that reality, that it cannot suffer the deduction of any falsehood. And it is my duty to say to you, that the need was never greater of new revelation than now. From the views I have already expressed you will infer the sad conviction, which I share, I believe, with numbers, of the universal decay and now almost death of faith in society. The soul is not preached. The Church seems to totter to its fall, almost all life extinct. On this occasion, any complaisance would be criminal, which told you, whose hope and commission it is to preach the faith of Christ, that the faith of Christ is preached.

It is time that this ill-suppressed murmur of all thoughtful men against the famine of our churches; this moaning of the heart because it is bereaved of the consolation, the hope, the grandeur, that come alone out of the culture of the moral nature; should be heard through the sleep of indolence, and over the din of routine. This great and perpetual office of the preacher is not discharged. Preaching is the expression of the moral sentiment in application to the duties of life. In how many churches, by how many prophets, tell me, is man made sensible that he is an infinite Soul; that the earth and heavens are passing into his mind; that he is drinking for ever the soul of God? Where now sounds the persuasion, that by its very melody imparadises my heart, and so affirms its own origin in heaven? Where shall I hear words such as in elder

ages drew men to leave all and follow,—father and mother, house and land, wife and child? Where shall I hear these august laws of moral being so pronounced, as to fill my ear, and I feel ennobled by the offer of my uttermost action and passion? The test of the true faith, certainly, should be its power to charm and command the soul, as the laws of nature control the activity of the hands—so commanding that we find pleasure and honour in obeying. The faith should blend with the light of rising and of setting suns, with the flying cloud, the singing bird, and the breath of flowers. But now the priest's Sabbath has lost the splendour of nature; it is unlovely; we are glad when it is done! we can make, we do make, even sitting in our pews, a far better, holier, sweeter, for ourselves.

Whenever the pulpit is usurped by a formalist, then is the worshipper defrauded and disconsolate. We shrink as soon as the prayers begin, which do not uplift, but smite and offend us. We are fain to wrap our cloaks about us, and secure, as best we can, a solitude that hears not. I once heard a preacher who sorely tempted me to say, I would go to church no more. Men go, thought I, where they are wont to go, else had no soul entered the temple in the afternoon. A snow-storm was falling around us. The snow-storm was real; the preacher merely spectral; and the eye felt the sad contrast in looking at him, and then out of the window behind him, into the beautiful meteor of the snow. He had lived in vain. He had no one word intimating that he had laughed or wept, was married or in love, had been commended, or cheated, or chagrined. If he had ever lived and acted, we were none the wiser for it. The capital secret of his profession, namely, to convert life into truth, he had not learned. Not one fact in all his experience, had he yet imported into his doctrine. This man had ploughed, and planted, and talked, and bought, and sold; he had read books; he had eaten and drunken; his head aches; his heart throbs; he smiles and suffers; yet was there not a surmise, a hint, in all the discourse, that he had ever lived at all. Not a line did he draw out of real history. The true preacher can be known by this, that he deals out to the people his life—life passed through the fire of thought. But of the bad preacher, it could not be told from his sermon, what age of the world he fell in; whether he had a father or a child; whether he was a freeholder or a pauper; whether he was a citizen or a countryman; or any other fact of his biography. It seemed strange that the people should come to church. It seemed as if their houses were very unentertaining, that they should prefer this thoughtless clamour. It shows that there is a commanding attraction in the moral sentiment, that can lend a faint tint of light to darkness and ignorance,

coming in its name and place. The good hearer is sure he has been touched sometimes; is sure there is somewhat to be reached, and some word that can reach it. When he listens to these vain words, he comforts himself by their relation to his remembrance of better hours, and so they clatter and echo unchallenged.

I am not ignorant that when we preach unworthily, it is not always quite in vain. There is a good ear, in some men, that draws supplies to virtue out of very indifferent nutriment. There is poetic truth concealed in all the commonplaces of prayer and of sermons, and though foolishly spoken, they may be wisely heard; for, each is some select expression that broke out in a moment of piety from some stricken or jubilant soul, and its excellency made it remembered. The prayers, and even the dogmas of our church, are like the zodiac of Denderah, and the astronomical monuments of the Hindoos, wholly insulated from anything now extant in the life and business of the people. They mark the height to which the waters once rose. But this docility is a check upon the mischief from the good and devout. In a large portion of the community, the religious service gives rise to quite other thoughts and emotions. We need not chide the negligent servant. We are struck with pity, rather, at the swift retribution of his sloth. Alas for the unhappy man that is called to stand in the pulpit, and *not* give bread of life. Everything that befalls, accuses him. Would he ask contributions for the missions, foreign or domestic? Instantly his face is suffused with shame, to propose to his parish, that they should send money a hundred or a thousand miles, to furnish such poor fare as they have at home, and would do well to go the hundred or the thousand miles to escape. Would he urge people to a godly way of living; and can he ask a fellow-creature to come to Sabbath meetings, when he and they all know what is the poor uttermost they can hope for therein? Will he invite them privately to the Lord's Supper? He dares not. If no heart warm this rite, the hollow, dry, creaking formality is too plain, than that he can face a man of wit and energy, and put the invitation without terror. In the street, what has he to say to the bold village blasphemer? The village blasphemer sees fear in the face, form, and gait of the minister.

Let me not taint the sincerity of this plea by any oversight of the claims of good men. I know and honour the purity and strict conscience of numbers of the clergy. What life the public worship retains, it owes to the scattered company of pious men, who minister here and there in the churches, and who, sometimes accepting with too great tenderness the tenet of the elders, have not accepted from others, but from their

own heart, the genuine impulses of virtue, and so still command our love and awe, to the sanctity of character. Moreover, the exceptions are not so much to be found in a few eminent preachers, as in the better hours, the truer inspirations of all,—nay, in the sincere moments of every man. But with whatever exception, it is still true, that tradition characterizes the preaching of this country; that it comes out of the memory, and not out of the soul; that it aims at what is usual, and not at what is necessary and eternal; that thus, historical Christianity destroys the power of preaching, by withdrawing it from the exploration of the moral nature of man, where the sublime is, where are the resources of astonishment and power. What a cruel injustice it is to that Law, the joy of the whole earth, which alone can make thought dear and rich; that Law whose fatal sureness the astronomical orbits poorly emulate, that it is travestied and depreciated, that it is behooted and behowled, and not a trait, not a word of it articulated. The pulpit, in losing sight of this Law, loses its reason, and gropes after it knows not what. And for want of this culture, the soul of the community is sick and faithless. It wants nothing so much as a stern, high, stoical, Christian discipline, to make it know itself and the divinity that speaks through it. Now man is ashamed of himself; he skulks and sneaks through the world, to be tolerated, to be pitied, and scarcely in a thousand years does any man dare to be wise and good, and so draw after him the tears and blessings of his kind.

Certainly there have been periods when, from the inactivity of the intellect on certain truths, a greater faith was possible in names and persons. The Puritans in England and America found in the Christ of the Catholic Church, and in the dogmas inherited from Rome, scope for their austere piety, and their longings for civil freedom. But their creed is passing away, and none arises in its room. I think no man can go, with his thoughts about him, into one of our churches, without feeling that what hold the public worship had on men is gone, or going. It has lost its grasp on the affection of the good, and the fear of the bad. In the country neighbourhoods, half parishes are *signing off*, to use the local term. It is already beginning to indicate character and religion to withdraw from the religious meetings. I have heard a devout person, who prized the Sabbath, say in bitterness of heart, "On Sundays, it seems wicked to go to church." And the motive, that holds the best there, is now only a hope and a waiting. What was once a mere circumstance, that the best and the worst men in the parish, the poor and the rich, the learned and the ignorant, young and old, should meet one day as fellows in one house, in

ADDRESS.

sign of an equal right in the soul, has come to be a paramount motive for going thither.

My friends, in these two errors, I think, I find the causes of a decaying church and a wasting unbelief. And what greater calamity can fall upon a nation, than the loss of worship? Then all things go to decay. Genius leaves the temple, to haunt the senate, or the market. Literature becomes frivolous. Science is cold. The eye of youth is not lighted by the hope of other worlds, and age is without honour. Society lives to trifles, and when men die, we do not mention them.

And now, my brothers, you will ask, What in these desponding days can be done by us? The remedy is already declared in the ground of our complaint of the Church. We have contrasted the Church with the Soul. In the soul, then, let the redemption be sought. Wherever a man comes, there comes revolution. The old is for slaves. When a man comes, all books are legible, all things transparent, all religions are forms. He is religious. Man is the wonderworker. He is seen amid miracles. All men bless and curse. He saith yea and nay, only. The stationariness of religion; the assumption that the age of inspiration is past, that the Bible is closed; the fear of degrading the character of Jesus by representing him as a man, indicate with sufficient clearness the falsehood of our theology. It is the office of a true teacher to show us that God is, not was; that He speaketh, not spake. The true Christianity—a faith like Christ's in the infinitude of man—is lost. None believeth in the soul of man, but only in some man or person old and departed. Ah me! no man goeth alone. All men go in flocks to this saint or that poet, avoiding the God who seeth in secret. They cannot see in secret; they love to be blind in public. They think society wiser than their soul, and know not that one soul, and their soul, is wiser than the whole world. See how nations and races flit by on the sea of time, and leave no ripple to tell where they floated or sunk, and one good soul shall make the name of Moses, or of Zeno, or of Zoroaster, reverend for ever. None assayeth the stern ambition to be the Self of the nation, and of nature, but each would be an easy secondary to some Christian scheme, or sectarian connection, or some eminent man. Once leave your own knowledge of God, your own sentiment, and take secondary knowledge, as St. Paul's, or George Fox's, or Swedenborg's, and you get wide from God with every year this secondary form lasts, and if, as now, for centuries,—the chasm yawns to that breadth, that men can scarcely be convinced there is in them anything divine.

Let me admonish you, first of all, to go alone, to refuse the good models, even those which are sacred in the imagination

of men, and dare to love God without mediator or veil. Friends enough you shall find who will hold up to your emulation Wesleys and Oberlins, Saints and Prophets. Thank God for these good men, but say, 'I also am a man.' Imitation cannot go above its model. The imitator dooms himself to hopeless mediocrity. The inventor did it, because it was natural to him, and so in him it has a charm. In the imitator, something else is natural, and he bereaves himself of his own beauty, to come short of another man's.

Yourself a newborn bard of the Holy Ghost—cast behind you all conformity, and acquaint men at first hand with Deity. Look to it first and only, that fashion, custom, authority, pleasure, and money, are nothing to you—are not bandages over your eyes, that you cannot see—but live with the privilege of the immeasurable mind. Not too anxious to visit periodically all families and each family in your parish connection—when you meet one of these men or women, be to them a divine man; be to them thought and virtue; let their timid aspirations find in you a friend; let their trampled instincts be genially tempted out in your atmosphere; let their doubts know that you have doubted, and their wonder feel that you have wondered. By trusting your own heart, you shall gain more confidence in other men. For all our penny-wisdom, for all our soul-destroying slavery to habit, it is not to be doubted, that all men have sublime thoughts; that all men value the few real hours of life; they love to be heard; they love to be caught up into the vision of principles. We mark with light in the memory the few interviews we have had, in the dreary years of routine and of sin, with souls that made our souls wiser; that spoke what we thought; that told us what we knew; that gave us leave to be what we inly were. Discharge to men the priestly office, and, present or absent, you shall be followed with their love as by an angel.

And, to this end, let us not aim at common degrees of merit. Can we not leave, to such as love it, the virtue that glitters for the commendation of society, and ourselves pierce the deep solitudes of absolute ability and worth? We easily come up to the standard of goodness in society. Society's praise can be cheaply secured, and almost all men are content with those easy merits; but the instant effect of conversing with God, will be, to put them away. There are persons who are not actors, not speakers, but influences; persons too great for fame, for display; who disdain eloquence; to whom all we call arc and artist, seems too nearly allied to show and by-ends, to the exaggeration of the finite and selfish, and loss of the universal. The orators, the poets, the commanders encroach on us only as fair women do, by our allowance and homage.

Sight them by preoccupation of mind, slay them, as you can well afford to do, by high and universal aims, and they instantly feel that you have right, and that it is in lower places that they must shine. They also feel your right; for they with you are open to the influx of the all-knowing Spirit, which annihilates before its broad noon the little shades and gradations of intelligence in the compositions we call wiser and wisest.

In such high communion, let us study the grand strokes of rectitude: a bold benevolence, an independence of friends, so that not the unjust wishes of those who love us, shall impair our freedom, but we shall resist for truth's sake the freest flow of kindness, and appeal to sympathies far in advance; and—what is the highest form in which we know this beautiful element—a certain solidity of merit, that has nothing to do with opinion, and which is so essentially and manifestly virtue, that it is taken for granted, that the right, the brave, the generous step will be taken by it, and nobody thinks of commending it. You would compliment a coxcomb doing a good act, but you would not praise an angel. The silence that accepts merit as the most natural thing in the world, is the highest applause. Such souls, when they appear, are the Imperial Guard of Virtue, the perpetual reserve, the dictators of fortune. One needs not praise their courage—they are the heart and soul of nature. O, my friends, there are resources in us on which we have not drawn. There are men who rise refreshed on hearing a threat; men to whom a crisis which intimidates and paralyzes the majority—demanding not the faculties of prudence and thrift, but comprehension, immovableness, the readiness of sacrifice—comes graceful and beloved as a bride. Napoleon said to Massena, that he was not himself until the battle began to go against him; then, when the dead began to fall in ranks around him, awoke his powers of combination, and he put on terror and victory as a robe. So it is in rugged crises, in unweariable endurance, and in aims which put sympathy out of question, that the angel is shown. But these are heights that we can scarce remember and look up to, without contrition and shame. Let us thank God that such things exist.

And now let us do what we can to rekindle the smouldering, nigh quenched fire on the altar. The evils of the church that now is are manifest. The question returns, What shall we do? I confess, all attempts to project and establish a Cultus with new rites and forms, seem to me vain. Faith makes us, and not we it, and faith makes its own forms. All attempts to contrive a system are as cold as the new worship introduced by the French to the goddess of Reason,—to-day, pasteboard

and fillagree, and ending to-morrow in madness and murder. Rather let the breath of new life be breathed by you through the forms already existing. For, if once you are alive, you shall find they shall become plastic and new. The remedy to their deformity is, first, soul, and second, soul, and evermore, soul. A whole popedom of forms, one pulsation of virtue can uplift and vivify. Two inestimable advantages Christianity has given us; first; the Sabbath, the jubilee of the whole world; whose light dawns welcome alike into the closet of the philosopher, into the garret of toil, and into prison-cells, and everywhere suggests, even to the vile, the dignity of spiritual being. Let us stand for evermore, a temple, which new love, new faith, new sight, shall restore to more than its first splendour to mankind. And secondly, the institution of preaching,—the speech of man to men,—essentially the most flexible of all organs, of all forms. What hinders that now everywhere, in pulpits, in lecture-rooms, in houses, in fields, wherever the invitation of men or your own occasions lead you, you speak the very truth, as your life and conscience teach it, and cheer the waiting, fainting hearts of men with new hope and new revelation?

I look for the hour when that supreme Beauty, which ravished the souls of those eastern men, and chiefly of those Hebrews, and through their lips spoke oracles to all time, shall speak in the West also. The Hebrew and Greek Scriptures contain immortal sentences, that have been bread of life to millions. But they have no equal integrity; are fragmentary; are not shown in their order to the intellect. I look for the new Teacher, that shall follow so far those shining laws, that he shall see them come full circle; shall see their rounding complete grace; shall see the world to be the mirror of the soul; shall see the identity of the law of gravitation with purity of heart; and shall show that the Ought, that Duty, is one thing with Science, with Beauty, and with Joy.

LITERARY ETHICS.

AN ORATION DELIVERED BEFORE THE LITERARY SOCIETIES OF
DARTMOUTH COLLEGE, JULY 24, 1838.

GENTLEMEN,

THE invitation to address you this day, with which you have honoured me, was a call so welcome, that I made haste to obey it. A summons to celebrate with scholars a literary festival, is so alluring to me, as to overcome the doubts I might well entertain of my ability to bring you any thought worthy of your attention. I have reached the middle age of man; yet I believe I am not less glad or sanguine at the meeting of scholars, than when, a boy, I first saw the graduates of my own College assembled at their anniversary. Neither years nor books have yet availed to extirpate a prejudice then rooted in me, that a scholar is the favourite of heaven and earth, the excellency of his country, the happiest of men. His duties lead him directly into the holy ground where other men's aspirations only point. His successes are occasions of the purest joy to all men. Eyes is he to the blind; feet is he to the lame. His failures, if he is worthy, are inlets to higher advantages. And because the scholar, by every thought he thinks, extends his dominion into the general mind of men, he is not one, but many. The few scholars in each country, whose genius I know, seem to me not individuals, but societies; and, when events occur of great import, I count over these representatives of opinion, whom they will affect, as if I were counting nations. And, even if his results were incommunicable; if they abode in his own spirit; the intellect hath somewhat so sacred in its possessions, that the fact of his existence and pursuits would be a happy omen.

Meantime I know that a very different estimate of the scholar's profession prevails in this country, and the importunity, with which society presses its claim upon young men, tends to pervert the views of the youth in respect to the culture of the intellect. Hence the historical failure, on which Europe and America have so freely commented. This country has not fulfilled what seemed the reasonable expectation of mankind. Men looked, when all feudal straps and bandages were snapped asunder, that nature too long the mother of dwarfs, should reimburse itself by a brood of Titans, who should laugh and leap in the continent, and run up the mountains of the West with the errand of genius and of love. But the mark of American merit in painting, in sculpture, in poetry, in fiction, in eloquence, seems to be a certain grace

without grandeur, and itself not new but derivative; a vase of fair outline, but empty,—which whoso sees, may fill with what wit and character is in him, but which does not, like the charged cloud, overflow with terrible beauty, and emit lightnings on all beholders.

I will not lose myself in the desultory questions, what are the limitations, and what the causes of the fact. It suffices me to say, in general, that the diffidence of mankind in the soul has crept over the American mind; that men here, as elsewhere, are indisposed to innovation, and prefer any antiquity, any usage, any livery productive of ease or profit, to the unproductive service of thought.

Yet, in every sane hour, the service of thought appears reasonable, the despotism of the senses insane. The scholar may lose himself in schools, in words, and become a pedant; but when he comprehends his duties, he above all men is a realist, and converses with things. For, the scholar is the student of the world, and of what worth the world is, and with what emphasis it accosts the soul of man, such is the worth, such the call of the scholar.

The want of the times, and the propriety of this anniversary, concur to draw attention to the doctrine of Literary Ethics. What I have to say on that doctrine distributes itself under the topics of the resources, the subject, and the discipline of the scholar.

I. The resources of the scholar are proportioned to his confidence in the attributes of the Intellect. The resources of the scholar are co-extensive with nature and truth, yet can never be his, unless claimed by him with an equal greatness of mind. He cannot know them until he has beheld with awe the infinitude and impersonality of the intellectual power. When he has seen, that it is not his, nor any man's, but that it is the soul which made the world, and that it is all accessible to him, he will know that he, as its minister, may rightfully hold all things subordinate and answerable to it. A divine pilgrim in nature, all things attend his steps. Over him stream the flying constellations; over him streams Time, as they, scarcely divided into months and years. He inhales the year as a vapour: its fragrant midsummer breath, its sparkling January heaven. And so pass into his mind, in bright transfiguration, the grand events of history, to take a new order and scale from him. He is the world; and the epochs and heroes of chronology are pictorial images, in which his thoughts are told. There is no event but sprung somewhere from the soul of man; and therefore there is none but the soul of man can interpret. Every presentiment of the mind is

literatures, and empires? The new man must feel that he is new, and has not come into the world mortgaged to the opinions and usages of Europe, and Asia, and Egypt. The sense of spiritual independence is like the lovely varnish of the dew, whereby the old, hard, peaked earth, and its old self-same productions, are made new every morning, and shining with the last touch of the artist's hand. A false humility, a complaisance to reigning schools, or to the wisdom of antiquity, must not defraud me of supreme possession of this hour. If any person have less love of liberty, and less jealousy to guard his integrity, shall he therefore dictate to you and me? Say to such doctors, We are thankful to you, as we are to history, to the pyramids, and the authors; but now our day is come; we have been born out of the eternal silence; and now will we live,—live for ourselves,—and not as the pall-bearers of a funeral, but as the upholders and creators of our age; and neither Greece nor Rome, nor the three Unities of Aristotle, nor the three Kings of Cologne, nor the College of the Sorbonne, nor the Edinburgh Review, is to command any longer. Now that we are here, we will put our own interpretation on things, and our own things for interpretation. Please himself with complaisance who will,—for me, things must take my scale, not I theirs. I will say with the warlike king, "God gave me this crown, and the whole world shall not take it away."

The whole value of history, of biography, is to increase my self-trust, by demonstrating what man can be and do. This is the moral of the Plutarchs, the Oudworths, the Tennemanns, who give us the story of men or of opinions. Any history of philosophy fortifies my faith, by showing me, that what high dogmas I had supposed were the rare and late fruit of a cumulative culture, and only now possible to some recent Kant or Fichte,—were the prompt improvisations of the earliest inquirers; of Parmenides, Heraclitus, and Xenophanes. In view of these students, the soul seems to whisper, 'There is a better way than this indolent learning of another. Leave me alone; do not teach me out of Leibnitz or Schelling, and I shall find it all out myself.'

Still more do we owe to biography the fortification of our hope. If you would know the power of character, see how much you would impoverish the world, if you could take clean out of history the lives of Milton, Shakespeare, and Plato,—these three, and cause them not to be. See you not, how much less the power of man would be? I console myself in, the poverty of my thoughts; in the paucity of great men, in the malignity and dulness of the nations, by falling back on these

sublime recollections, and seeing what the prolific soul could beget on actual nature;—seeing that Plato was, and Shakespeare, and Milton,—three irrefragable facts. Then I dare; I also will essay to be. The humblest, the most hopeless, in view of these radiant facts, may now theorize and hope. In spite of all the rueful abortions that squeak and gibber in the street, in spite of slumber and guilt, in spite of the army, the bar-room, and the jail, *have been* these glorious manifestations of the mind; and I will thank my great brothers so truly for the admonition of their being, as to endeavour also to be just and brave, to aspire and to speak. Plotinus too, and Spinoza, and the immortal bards of philosophy,—that which they have written out with patient courage, makes me bold. No more will I dismiss, with haste, the visions which flash and sparkle across my sky; but observe them, approach them, domesticate them, brood on them, and draw out of the past, genuine life for the present hour.

To feel the full value of these lives, as occasions of hope and provocation, you must come to know, that each admirable genius is but a successful diver in that sea whose floor of pearls is all your own. The impoverishing philosophy of ages has laid stress on the distinctions of the individual, and not on the universal attributes of man. The youth, intoxicated with his admiration of a hero, fails to see, that it is only a projection of his own soul, which he admires. In solitude, in a remote village, the ardent youth loiters and mourns. With inflamed eye, in this sleeping wilderness, he has read the story of the Emperor Charles the Fifth, until his fancy has brought home to the surrounding woods, the faint roar of cannonades in the Milanese, and marches in Germany. He is curious concerning that man's day. What filled it? the crowded orders, the stern decisions, the foreign despatches, the Castilian etiquette? The soul answers—Behold his day here! In the sighing of these woods, in the quiet of these gray fields, in the cool breeze that sings out of these northern mountains; in the workmen, the boys, the maidens, you meet,—in the hopes of the morning, the ennui of noon, and sauntering of the afternoon; in the disquieting comparisons; in the regrets at want of vigour; in the great idea, and the puny execution;—behold Charles the Fifth's day; another, yet the same; behold Chatham's, Hampden's, Bayard's, Alfred's, Scipio's, Pericles's day,—day of all that are born of women. The difference of circumstance is merely costume. I am tasting the self-same life,—its sweetness, its greatness, its pain, which I so admire in other men. Do not foolishly ask of the inscrutable, obliterated past, what it cannot tell,—the details of that nature, of that day, called Byron, or Burke;—but ask it of the

this hero, and that, and every hero. Be lord of a day, through wisdom and justice, and you can put up your history books.

An intimation of these broad rights is familiar in the sense of injury which men feel in the assumption of any man to limit their possible progress. We resent all criticism, which denies us anything that lies in our line of advance. Say to the man of letters, that he cannot paint a Transfiguration, or build a steamboat, or be a grand-marshal,—and he will not seem to himself depreciated. But deny to him any quality of literary or metaphysical power, and he is piqued. Concede to him genius, which is a sort of Stoical *plenum* annulling the comparative, and he is content; but concede him talents never so rare, denying him genius, and he is aggrieved. What does this mean? Why simply, that the soul has assurance, by instincts and presentiments, of *all* power in the direction of its ray, as well as of the special skills it has already acquired.

In order to a knowledge of the resources of the scholar, we must not rest in the use of slender accomplishments,—of faculties to do this and that other feat with words; but we must pay our vows to the highest power, and pass, if it be possible, by assiduous love and watching, into the visions of absolute truth. The growth of the intellect is strictly analogous in all individuals. It is larger reception. Able men, in general, have good dispositions, and a respect for justice; because an able man is nothing else than a good, free, vascular organization, whereinto the universal spirit freely flows; so that his fund of justice is not only vast, but infinite. All men, in the abstract, are just and good; what hinders them, in the particular, is, the momentary predominance of the finite and individual over the general truth. The condition of our incarnation in a private self, seems to be, a perpetual tendency to prefer the private law, to obey the private impulse, to the exclusion of the law of universal being. The hero is great by means of the predominance of the universal nature; he has only to open his mouth, and it speaks; he has only to be forced to act, and it acts. All men catch the word, or embrace the deed, with the heart, for it is verily theirs as much as his; but in them this disease of an excess of organization cheats them of equal issues. Nothing is more simple than greatness; indeed, to be simple is to be great. The vision of genius comes by renouncing the too officious activity of the understanding, and giving leave and amplest privilege to the spontaneous sentiment. Out of this must all that is alive and genial in thought go. Men grind and grind in the mill of a

truism, and nothing comes out but what was put in. But the moment they desert the tradition for a spontaneous thought, then poetry, wit, hope, virtue, learning, anecdote, all flock to their aid. Observe the phenomenon of extempore debate. A man of cultivated mind, but reserved habits, sitting silent, admires the miracle of free, impassioned, picturesque speech, in the man addressing an assembly;—a state of being and power, how unlike his own! Presently his own emotion rises to his lips, and overflows in speech. He must also rise and say somewhat. Once embarked, once having overcome the novelty of the situation, he finds it just as easy and natural to speak—to speak with thoughts, with pictures, with rhythmical balance of sentences—as it was to sit silent; for, it needs not to do, but to suffer; he only adjusts himself to the free spirit which gladly utters itself through him; and motion is as easy as rest.

II. I pass now to consider the task offered to the intellect of this country. The view I have taken of the resources of the scholar, pre-supposes a subject as broad. We do not seem to have imagined its riches. We have not heeded the invitation it holds out. To be as good a scholar as Englishmen are; to have as much learning as our contemporaries; to have written a book that is read; satisfies us. We assume, that all thought is already long ago adequately set down in books—all imaginations in poems; and what we say, we only throw in as confirmatory of this supposed complete body of literature. A very shallow assumption. Say rather, all literature is yet to be written. Poetry has scarce chanted its first song. The perpetual admonition of nature to us, is, 'The world is new, untried. Do not believe the past. I give you the universe a virgin to-day.'

By Latin and English poetry, we were born and bred in an oratorio of praises of nature—flowers, birds, mountains, sun, and moon;—yet the naturalist of this hour finds that he knows nothing, by all their poems, of any of these fine things; that he has conversed with the mere surface and show of them all; and of their essence, or of their history, knowing nothing. Further inquiry will discover that nobody—that not these chanting poets themselves, knew anything sincere of these handsome natures they so commended; that they contented themselves with the passing chirp of a bird, that they saw one or two mornings, and listlessly looked at sunsets, and repeated idly these few glimpses in their song. But go into the forest, you shall find all new and undescribed. The hawking of the wild geese flying by night; the thin note of the companionable titmouse, in the winter day; the fall of swarms of flies, in

autumn, from combats high in the air, pattering down on the leaves like rain; the angry hiss of the wood-birds; the pine throwing out its pollen for the benefit of the next century; the turpentine exuding from the tree;—and, indeed, any vegetation; any animation; any and all, are alike unattempted. The man who stands on the sea-shore, or who rambles in the woods, seems to be the first man that ever stood on the shore, or entered a grove, his sensations and his world are so novel and strange. Whilst I read the poets, I think that nothing new can be said about morning and evening. But when I see the daybreak, I am not reminded of these Homeric, or Shakespearian, or Miltonic, or Chaucerian pictures. No; but I feel perhaps the pain of an alien world; a world not yet subdued by the thought; or, I am cheered by the moist, warm, glittering, budding, melodious hour, that takes down the narrow walls of my soul, and extends its life and pulsation to the very horizon. *That* is morning, to cease for a bright hour to be a prisoner of this sickly body, and to become as large as nature.

The noonday darkness of the American forest, the deep, echoing, aboriginal woods, where the living columns of the oak and fir tower up from the ruins of the trees of the last millennium; where, from year to year, the eagle and the crow see no intruder; the pines, bearded with savage moss, yet touched with grace by the violets at their feet; the broad, cold lowland, which forms its coat of vapour with the stillness of subterranean crystallization; and where the traveller, amid the repulsive plants that are native in the swamp, thinks with pleasing terror of the distant town; this beauty—haggard and desert beauty, which the sun and the moon, the snow and the rain, re-paint and vary, has never been recorded by art, yet is not indifferent to any passenger. All men are poets at heart. They serve nature for bread, but her loveliness overcomes them sometimes. What mean these journeys to Niagara; these pilgrims to the White Hills? Men believe in the adaptations of utility, always: in the mountains, they may believe in the adaptations of the eye. Undoubtedly, the changes of geology have a relation to the prosperous sprouting of the corn and peas in my kitchen garden; but not less is there a relation of beauty between my soul and the dim crags of Agiocochook up there in the clouds. Every man, when this is told, hearkens with joy, and yet his own conversation with nature is still unsung.

Is it otherwise with civil history? Is it not the lesson of our experience that every man, were life long enough, would write history for himself? What else do these volumes of extracts and manuscript commentaries, that every scholar writes, indicate? Greek history is one thing to me; another

to you. Since the birth of Niebuhr and Wolf, Roman and Greek history have been written anew. Since Carlyle wrote French history, we see that no history, that we have, is safe, but a new classifier shall give it new and more philosophical arrangement. Thucydides, Livy, have only provided materials. The moment a man of genius pronounces the name of the Pelasgi, of Athens, of the Etrurian, of the Roman people, we see their state under a new aspect. As in poetry and history, so in the other departments. There are few masters or none. Religion is yet to be settled on its fast foundations in the breast of man; and politics, and philosophy, and letters, and art. As yet we have nothing but tendency and indication.

This starting, this warping of the best literary works from the adamant of nature, is especially observable in philosophy. Let it take what tone of pretension it will, to this complexion must it come, at last. Take, for example, the French Eclecticism, which Cousin esteems so conclusive; there is an optical illusion in it. It avows great pretensions. It looks as if they had all truth, in taking all the systems, and had nothing to do, but to sift and wash and strain, and the gold and diamonds would remain in the last colander. But, Truth is such a flyaway, such a slyboots, so untransportable and unbarrelable a commodity, that it is as bad to catch as light. Shut the shutters never so quick, to keep all the light in, it is all in vain; it is gone before you can cry, Hold. And so it happens with our philosophy. Translate, collate, distil all the systems, it steads you nothing; for truth will not be compelled, in any mechanical manner. But the first observation you make, in the sincere act of your nature, though on the veriest trifle, may open a new view of nature and of man, that, like a menstruum, shall dissolve all theories in it; shall take up, Greece, Rome, Stoicism, Eclecticism, and what not, as mere data and food for analysis, and dispose of your world-containing system, as a very little unit. A profound thought, anywhere, classifies all things: a profound thought will lift Olympus. The book of philosophy is only a fact, and no more inspiring fact than another, and no less; but a wise man will never esteem it anything final and transcending. Go and talk with a man of genius, and the first word he utters, sets all your so-called knowledge afloat and at large. Then Plato, Bacon, Kant, and the Eclectic Cousin, condescend instantly to be men and mere facts.

I by no means aim, in these remarks, to disparage the merit of these or of any existing compositions; I only say that any particular portraiture does not in any manner exclude or forestall a new attempt, but, when considered by the soul, warps and shrinks away. The inundation of the spirit sweeps

away before it all our little architecture of wit and memory, as straws and straw-huts before the torrent. Works of the intellect are great only by comparison with each other; *Ivanhoe* and *Waverley* compared with *Castle Radcliffe* and the *Porter* novels; but nothing is great—not mighty *Homer* and *Milton*—beside the infinite Reason. It carries them away as a flood. They are as a sleep.

Thus is justice done to each generation and individual—wisdom teaching man that he shall not hate, or fear, or mimic his ancestors; that he shall not bewail himself, as if the world was old, and thought was spent, and he was born into the dotage of things; for, by virtue of the Deity, thought renews itself inexhaustibly every day, and the thing whereon it shines, though it were dust and sand, is a new subject with countless relations.

III. Having thus spoken of the resources and the subject of the scholar, out of the same faith proceeds also the rule of his ambition and life. Let him know that the world is his, but he must possess it by putting himself into harmony with the constitution of things. He must be a solitary, laborious, modest, and charitable soul.

He must embrace solitude as a bride. He must have his glees and his glooms alone. His own estimate must be measure enough, his own praise reward enough for him. And why must the student be solitary and silent? That he may become acquainted with his thoughts. If he pines in a lonely place, hankering for the crowd, for display, he is not in the lonely place; his heart is in the market; he does not see; he does not hear; he does not think. But go cherish your soul; expel companions; set your habits to a life of solitude; then, will the faculties rise fair and full within, like forest trees and field flowers; you will have results, which, when you meet your fellow-men, you can communicate, and they will gladly receive. Do not go into solitude only that you may presently come into public. Such solitude denies itself; is public and stale. The public can get public experience, but they wish the scholar to replace to them those private, sincere, divine experiences, of which they have been defrauded by dwelling in the street. It is the noble, manlike, just thought, which is the superiority demanded of you, and not crowds but solitude confers this elevation. Not insulation of place, but independence of spirit, is essential, and it is only as the garden, the cottage, the forest, and the rock, are a sort of mechanical aids to this, that they are of value. Think alone, and all places are friendly and sacred. The poets who have lived in cities have been hermits still. Inspiration makes solitude anywhere. *Pindar*, *Raffaël*.

Angelo, Dryden, De Staël, dwell in crowds, it may be, but the instant thought comes, the crowd grows dim to their eye; their eye fixes on the horizon—on vacant space; they forget the bystanders; they spurn personal relations; they deal with abstractions, with verities, with ideas. They are alone with the mind.

Of course, I would not have any superstition about solitude. Let the youth study the uses of solitude and of society. Let him use both, not serve either. The reason why an ingenious soul shuns society, is to the end of finding society. It repudiates the false, out of love of the true. You can very soon learn all that society can teach you for one while. Its foolish routine, an indefinite multiplication of balls, concerts, rides, theatres, can teach you no more than a few can. Then accept the hint of shame, of spiritual emptiness and waste, which true nature gives you, and retire, and hide; lock the door; shut the shutters; then welcome falls the imprisoning rain—dear hermitage of nature. Re-collect the spirits. Have solitary prayer and praise. Digest and correct the past experience; and blend it with the new and divine life.

You will pardon me, Gentlemen, if I say, I think that we have need of a more rigorous scholastic rule; such an asceticism, I mean, as only the hardihood and devotion of the scholar himself can enforce. We live in the sun and on the surface—a thin, plausible, superficial existence, and talk of muse and prophet, of art and creation. But out of our shallow and frivolous way of life, how can greatness ever grow? Come now, let us go and be dumb. Let us sit with our hands on our mouths, a long, austere, Pythagorean lustrum. Let us live in corners, and do chores, and suffer, and weep, and drudge, with eyes and hearts that love the Lord. Silence, seclusion, austerity, may pierce deep into the grandeur and secret of our being, and so diving, bring up out of secular darkness, the sublimities of the moral constitution. How mean to go blazing, a gaudy butterfly, in fashionable or political saloons, the fool of society, the fool of notoriety, a topic for newspapers, a piece of the street, and forfeiting the real prerogative of the russet coat, the privacy, and the true and warm heart of the citizen!

Fatal to the man of letters, fatal to man, is the lust of display, the seeming that unmakes our being. A mistake of the main end to which they labour, is incident to literary men, who, dealing with the organ of language—the subtlest, strongest, and longest-lived of man's creations, and only fitly used as the weapon of thought and of justice—learn to enjoy the pride of playing with this splendid engine, but rob it of its almightiness by failing to work with it. Extricating themselves from the tasks of the world, the world revenges itself by

exposing, at every turn, the folly of these incomplete, pedantic, useless, ghostly creatures. The scholar will feel, that the richest romance—the noblest fiction that was ever woven—the heart and soul of beauty—lies enclosed in human life. Itself of surpassing value, it is also the richest material for his creations. How shall he know its secrets of tenderness, of terror, of will, and of fate? How can he catch and keep the strain of upper music that peals from it? Its laws are concealed under the details of daily action. All action is an experiment upon them. He must bear his share of the common load. He must work with men in houses, and not with their names in books. His needs, appetites, talents, affections, accomplishments, are keys that open to him the beautiful museum of human life. Why should he read it as an Arabian tale, and not know, in his own beating bosom, its sweet and smart? Out of love and hatred, out of earnings, and borrowings, and lendings, and losses; out of sickness and pain; out of wooing and worshipping; out of travelling, and voting, and watching, and caring; out of disgrace and contempt, comes our tuition in the serene and beautiful laws. Let him not slur his lesson: let him learn it by heart. Let him endeavour exactly, bravely, and cheerfully, to solve the problem of that life which is set before *him*. And this, by punctual action, and not by promises or dreams. Believing, as in God, in the presence and favour of the grandest influences, let him deserve that favour, and learn how to receive and use it, by fidelity also to the lower observances.

This lesson is taught with emphasis in the life of the great actor of this age, and affords the explanation of his success. Bonaparte represents truly a great recent revolution, which we in this country, please God, shall carry to its farthest consummation. Not the least instructive passage in modern history, seems to me a trait of Napoleon, exhibited to the English when he became their prisoner. On coming on board the *Bellerophon*, a file of English soldiers drawn up on deck, gave him a military salute. Napoleon observed, that their manner of handling their arms differed from the French exercise, and, putting aside the guns of those nearest him, walked up to a soldier, took his gun, and himself went through the motion in the French mode. The English officers and men looked on with astonishment, and inquired if such familiarity was usual with the Emperor.

In this instance, as always, that man, with whatever defects or vices, represented performance in lieu of pretension. Feudalism and Orientalism had long enough thought it majestic to do nothing; the modern majesty consists in work. He belonged to a class fast growing in the wor'd, who think, that

what a man can do is his greatest ornament, and that he always consults his dignity by doing it. He was not a believer in luck; he had a faith, like sight, in the application of means to ends. Means to ends, is the motto of all his behaviour. He believed that the great captains of antiquity performed their exploits only by correct combinations, and by justly comparing the relation between means and consequences; efforts and obstacles. The vulgar call good fortune that which really is produced by the calculations of genius. But Napoleon, thus faithful to facts, had also this crowning merit; that, whilst he believed in number and weight, and omitted no part of prudence, he believed also in the freedom and quite incalculable force of the soul. A man of infinite caution, he neglected never the least particular of preparation, of patient adaptation; yet nevertheless he had a sublime confidence, as in his all, in the sallies of the courage, and the faith in his destiny, which, at the right moment, repaired all losses, and demolished cavalry, infantry, king, and kaiser, as with irresistible thunderbolts. As they say the bough of the tree has the character of the leaf, and the whole tree of the bough, so, it is curious to remark, Bonaparte's army partook of this double strength of the captain; for, whilst strictly supplied in all its appointments, and everything expected from the valour and discipline of every platoon, in flank and centre, yet always remained his total trust in the prodigious revolutions of fortune, which his reserved Imperial Guard were capable of working, if, in all else, the day was lost. Here he was sublime. He no longer calculated the chance of the cannon ball. He was faithful to tactics to the uttermost—and when all tactics had come to an end, then, he dilated, and availed himself of the mighty saltations of the most formidable soldiers in nature.

Let the scholar appreciate this combination of gifts, which, applied to better purpose, make true wisdom. He is a revealer of things. Let him first learn the things. Let him not, too eager to grasp some badge of reward, omit the work to be done. Let him know, that, though the success of the market is in the reward, true success is the doing; that, in the private obedience to his mind; in the sedulous inquiry, day after day, year after year, to know how the thing stands; in the use of all means, and most in the reverence of the humble commerce and humble needs of life,—to hearken what *they* say, and so, by mutual reaction of thought and life, to make thought solid, and life wise; and in a contempt for the gabble of to-day's opinions, the secret of the world is to be learned, and the skill truly to unfold it is acquired. Or rather, is it not, that, by this discipline, the usurpation of the senses is overcome, and the lower faculties of man are subdued to docility; through which,

as an unobstructed channel, the soul now easily and gladly flows?

The good scholar will not refuse to bear the yoke in his youth; to know, if he can, the uttermost secret of toil and endurance; to make his own hands acquainted with the soil by which he is fed, and the sweat that goes before comfort and luxury. Let him pay his tithe, and serve the world as a true and noble man; never forgetting to worship the immortal divinities, who whisper to the poet, and make him the utterer of melodies that pierce the ear of eternal time. If he have this twofold goodness,—the drill and the inspiration,—then he has health; then he is a whole, and not a fragment; and the perfection of his endowment will appear in his compositions. Indeed, this twofold merit characterizes ever the productions of great masters. The man of genius should occupy the whole space between God or pure mind, and the multitude of uneducated men. He must draw from the infinite Reason, on one side; and he must penetrate into the heart and sense of the crowd, on the other. From one, he must draw his strength; to the other he must owe his aim. The one yokes him to the real; the other, to the apparent. At one pole, is Reason; at the other, Common Sense. If he be defective at either extreme of the scale, his philosophy will seem low and utilitarian; or it will appear too vague and indefinite for the uses of life.

The student, as we all along insist, is great only by being passive to the superincumbent spirit. Let this faith, then, dictate all his action. Snares and bribes abound to mislead him; let him be true nevertheless. His success has its perils too. There is somewhat inconvenient and injurious in his position. They whom his thoughts have entertained or inflamed, seek him before yet they have learned the hard conditions of thought. They seek him, that he may turn his lamp on the dark riddles whose solution they think is inscribed on the walls of their being. They find that he is a poor, ignorant man, in a white-seamed, rusty coat, like themselves, nowise emitting a continuous stream of light, but now and then a jet of luminous thought, followed by total darkness; moreover, that he cannot make of his infrequent illumination a portable taper to carry whither he would, and explain now this dark riddle, now that. Sorrow ensues. The scholar regrets to damp the hope of ingenuous boys; and the youth has lost a star out of his new flaming firmament. Hence the temptation to the scholar to mystify; to hear the question; to sit upon it; to make an answer of words, in lack of the oracle of things. Not the less let him be cold and true, and wait in patience, knowing that truth can make even silence eloquent and

memorable. Truth shall be policy enough for him. Let him open his breast to all honest inquiry, and be an artist superior to tricks of art. Show frankly as a saint would do, your experience, methods, tools, and means. Welcome all comers to the freest use of the same. And out of this superior frankness and charity, you shall learn higher secrets of your nature, which gods will bend and aid you to communicate.

If, with a high trust, he can thus submit himself, he will find that ample returns are poured into his bosom, out of what seemed hours of obstruction and loss. Let him not grieve too much on account of unfit associates. When he sees how much thought he owes to the disagreeable antagonism of various persons who pass and cross him, he can easily think that in a society of perfect sympathy, no word, no act, no record, would be. He will learn, that it is not much matter what he reads, what he does. Be a scholar, and he shall have the scholar's part of everything. As, in the counting-room, the merchant cares little whether the cargo be hides or barilla; the transaction, a letter of credit or a transfer of stocks; be it what it may, his commission comes gently out of it; so you shall get your lesson out of the hour, and the object, whether it be a concentrated or a wasteful employment, even in reading a dull book, or working off a stint of mechanical day labour, which your necessities or the necessities of others impose.

Gentlemen, I have ventured to offer you these considerations upon the scholar's place, and hope, because I thought, that, standing, as many of you now do, on the threshold of this College, girt and ready to go and assume tasks, public and private, in your country, you would not be sorry to be admonished of those primary duties of the intellect, whereof you will seldom hear from the lips of your new companions. You will hear every day the maxims of a low prudence. You will hear, that the first duty is to get land and money, place and name. 'What is this Truth you seek? what is this Beauty?' men will ask, with derision. If, nevertheless, God have called any of you to explore truth and beauty, be bold, be firm, be true. When you shall say, 'As others do, so will I: I renounce, I am sorry for it, my early visions; I must eat the good of the land and let learning and romantic expectations go, until a more convenient season;'—then dies the man in you; then once more perish the buds of art, and poetry, and science, as they have died already in a thousand thousand men. The hour of that choice is the crisis of your history; and see that you hold yourself fast by the intellect. It is this domineering temper of the sensual world, that creates the extreme need of the priests of science; and it is the office and right of the intellect

to make and not take its estimate. Bend to the persuasion which is flowing to you from every object in nature, to be its tongue to the heart of man, and to show the besotted world how passing fair is wisdom. Forewarned that the vice of the times and the country is an excessive pretension, let us seek the shade, and find wisdom in neglect. Be content with a little light, so it be your own. Explore, and explore. Be neither chided nor flattered out of your position of perpetual inquiry. Neither dogmatise, nor accept another's dogmatism. Why should you renounce your right to traverse the star-lit deserts of truth, for the premature comforts of an acre, house, and barn? Truth also has its roof, and bed, and board. Make yourself necessary to the world, and mankind will give you bread, and if not store of it, yet such as shall not take away your property in all men's possessions, in all men's affections, in art, in nature, and in hope.

You will not fear, that I am enjoining too stern an asceticism. Ask not, Of what use is a scholarship that systematically retreats? or, Who is the better for the philosopher who conceals his accomplishments, and hides his thoughts from the waiting world? Hides his thoughts! Hide the sun and moon. Thought is all light, and publishes itself to the universe. It will speak, though you were dumb, by its own miraculous organ. It will flow out of your actions, your manners, and your face. It will bring you friendships. It will impledge you to truth by the love and expectation of generous minds. By virtue of the laws of that Nature, which is one and perfect, it shall yield every sincere good that is in the soul, to the scholar beloved of earth and heaven.

THE METHOD OF NATURE.

AN ORATION DELIVERED BEFORE THE SOCIETY OF THE ADELPHI, IN
WATERVILLE COLLEGE, MAINE, AUGUST 11, 1841.

GENTLEMEN,

LET us exchange congratulations on the enjoyments and the promises of this literary anniversary. The land we live in has no interest so dear, if it knew its want, as the fit consecration of days of reason and thought. Where there is no vision, the people perish. The scholars are the priests of that thought which establishes the foundations of the earth. No matter what is their special work or profession, they stand for the spiritual interest of the world, and it is a common calamity if they neglect their post in a country where the material interest is so predominant as it is in America. We hear something too much of the results of machinery, commerce, and the useful arts. We are a puny and a fickle folk. Avarice, hesitation, and following, are our diseases. The rapid wealth which hundreds in the community acquire in trade, or by the incessant expansions of our population and arts, enchants the eyes of all the rest; the luck of one is the hope of thousands, and the bribe acts like the neighbourhood of a gold mine to impoverish the farm, the school, the church, the house, and the very body and feature of man.

I do not wish to look with sour aspect at the industrious manufacturing village, or the mart of commerce. I love the music of the water-wheel; I value the railway; I feel the pride which the sight of a ship inspires; I look on trade and every mechanical craft as education also. But let me discriminate what is precious herein. There is in each of these works an act of invention, an intellectual step, or short series of steps taken; that act or step is the spiritual act; all the rest is mere repetition of the same a thousand times. And I will not be deceived into admiring the routine of handicrafts and mechanics, how splendid soever the result, any more than I admire the routine of the scholars or clerical class. That splendid results ensue from the labours of stupid men; is the fruit of higher laws than their will, and the routine is not to be praised for it. I would not have the labourer sacrificed to the result,—I would not have the labourer sacrificed to my convenience and pride, nor to that of a great class of such as me. Let there be worse cotton and better men. The weaver should not be bereaved of his superiority to his work, and his knowledge that the product or the skill is of no value, except so far as it embodies his spiritual prerogatives. If I see

citizen; and are continually yielding to this dazzling lustre of numbers, that which they would never yield to the solitary example of any one.

Whilst the multitude of men degrade each other, and give currency to desponding doctrines, the scholar must be a bringer of hope, and must reinforce man against himself. I sometimes believe that our literary anniversaries will presently assume a greater importance, as the eyes of men open to their capabilities. Here, a new set of distinctions, a new order of ideas, prevail. Here, we set a bound to the respectability of wealth, and a bound to the pretensions of the law and the church. The bigot must cease to be a bigot to-day. Into our charmed circle, power cannot enter; and the sturdiest defender of existing institutions feels the terrific inflammability of this air which condenses heat in every corner that may restore to the elements the fabrics of ages. Nothing solid is secure; everything tilts and rocks. Even the scholar is not safe; he too is searched and revised. Is his learning dead? Is he living in his memory? The power of mind is not mortification, but life. But come forth, thou curious child! hither, thou loving, all-hoping poet! hither, thou tender, doubting heart, who has not yet found any place in the world's market fit for thee; any wares which thou couldst buy or sell,—so large is thy love and ambition,—thine and not theirs is the hour. Smooth thy brow, and hope and love on, for the kind heaven justifies thee and the whole world feels that thou art in the right.

We ought to celebrate this hour by expressions of manly joy. Not thanks, not prayer, seem quite the highest or truest name for our communication with the infinite,—but glad and conspiring reception,—reception that becomes giving in its turn, as the receiver is only the All-Giver in part and in infancy. I cannot,—nor can any man,—speak precisely of things so sublime, but it seems to me, the wit of man, his strength, his grace, his tendency, his art, is the grace and the presence of God. It is beyond explanation. When all is said and done, the rapt saint is found the only logician. Not exhortation, not argument becomes our lips, but pæans of joy and praise. But not of adulation: we are too nearly related in the deep of the mind to that we honour. It is God in us which checks the language of petition by a grander thought. In the bottom of the heart, it is said; 'I am, and by me, O child! this fair body and world of thine stands and grows. I am; all things are mine: and all mine are thine.'

The festiva of the intellect, and the return to its source, cast a strong light on the always interesting topics of Man and

Nature. We are forcibly reminded of the old want. There is no man; there hath never been. The Intellect still asks that a man may be born. The flame of life flickers feebly in human breasts. We demand of men a richness and universality we do not find. Great men do not content us. It is their solitude, not their force, that makes them conspicuous. There is somewhat indigent and tedious about them. They are poorly tied to one thought. If they are prophets, they are egotists; if polite and various, they are shallow. How tardily men arrive at any result! how tardily they pass from it to another! The crystal sphere of thought is as concentric as the geological structure of the globe. As our soils and rocks lie in strata, concentric strata, so do all men's thinkings run laterally, never vertically. Here comes by a great inquisitor with auger and plumb-line, and will bore an Artesian well through our conventions and theories, and pierce to the core of things. But as soon as he probes the crust, behold gimlet, plumb-line, and philosopher take a lateral direction, in spite of all resistance, as if some strong wind took everything off its feet, and if you come month after month to see what progress our reformer has made—not an inch has he pierced—you still find him with new words in the old place, floating about in new parts of the same old vein or crust. The new book says, 'I will give you the key to nature,' and we expect to go like a thunderbolt to the centre. But the thunder is a surface phenomenon, makes a skin-deep cut, and so does the sage. The wedge turns out to be a rocket. Thus a man lasts but a very little while, for his monomania becomes insupportably tedious in a few months. It is so with every book and person: and yet—and yet—we do not take up a new book, or meet a new man, without a pulse-beat of expectation. And this invincible hope of a more adequate interpreter is the sure prediction of his advent.

In the absence of man, we turn to nature, which stands next. In the divine order, intellect is primary; nature, secondary; it is the memory of the mind. That which once existed in intellect as pure law, has now taken body as Nature. It existed already in the mind in solution; now, it has been precipitated, and the bright sediment is the world. We can never be quite strangers or inferiors in nature. It is flesh of our flesh, and bone of our bone. But we no longer hold it by the hand; we have lost our miraculous power; our arm is no more as strong as the frost; nor our will equivalent to gravity and the elective attractions. Yet we can use nature as a convenient standard, and the meter of our rise and fall. It has this advantage as a witness, it cannot be debauched. When man curses, nature still testifies to truth and love. We

may, therefore, safely study the mind in nature, because we cannot steadily gaze on it in mind; as we explore the face of the sun in a pool, when our eyes cannot brook his direct splendours.

It seems to me, therefore, that it were some suitable psalm, if we should piously celebrate this hour by exploring the *method of nature*. Let us see *that*, as nearly as we can, and try how far it is transferable to the literary life. Every earnest glance we give to the realities around us, with intent to learn, proceeds from a holy impulse, and is really songs of praise. What difference can it make whether it take the shape of exhortation, or of passionate exclamation, or of scientific statement? These are forms merely. Through them we express, at last, the fact, that God has done thus or thus.

In treating a subject so large, in which we must necessarily appeal to the intuition, and aim much more to suggest than to describe, I know it is not easy to speak with the precision attainable on topics of less scope. I do not wish in attempting to paint a man, to describe an air-fed, unimpassioned, impossible ghost. My eyes and ears are revolted by any neglect of the physical facts, the limitations of man. And yet one who conceives the true order of nature, and beholds the visible as proceeding from the invisible, cannot state his thought, without seeming to those who study the physical laws, to do them some injustice. There is an intrinsic defect in the organ. Language overstates. Statements of the infinite, are usually felt to be unjust to the finite, and blasphemous. Empedocles undoubtedly spoke a truth of thought, when he said, "I am God;" but the moment it was out of his mouth, it became a lie to the ear; and the world revenged itself for the seeming arrogance, by the good story about his shoe. How can I hope for better hap in my attempts to enunciate spiritual facts? Yet let us hope, that as far as we receive the truth, so far shall we be felt by every true person to say what is just.

The method of nature: who could ever analyze it? That rushing stream will not stop to be observed. We can never surprise nature in a corner; never find the end of a thread; never tell where to set the first stone. The bird hastens to lay her egg: the egg hastens to be a bird. The wholeness we admire in the order of the world, is the result of infinite distribution. Its smoothness is the smoothness of the pitch of the cataract. Its permanence is a perpetual inchoation. Every natural fact is an emanation, and that from which it emanates is an emanation also, and from every emanation is a new emanation. If anything could stand still, it would be crushed and dissipated by the torrent it resisted, and if it were a mind, would be crazed; as insane persons are those who hold fast to one thought, and do not flow with the course of nature.

Not the cause, but an ever novel effect, nature descends always from above. It is unbroken obedience. The beauty of these fair objects is imported into them from a metaphysical and eternal spring. In all animal and vegetable forms, the physiologist concedes that no chemistry, no mechanics, can account for the facts, but a mysterious principle of life must be assumed which not only inhabits the organ, but makes the organ.

How silent, how spacious, what room for all, yet without place to insert an atom,—in graceful succession, in equal fullness, in balanced beauty, the dance of the hours goes forward still. Like an odour of incense, like a strain of music, like a sleep, it is inexact and boundless. It will not be dissected, nor unravelled, nor shown. Away, profane philosopher! seekest thou in nature the cause? This refers to that, and that to the next, and the next to the third, and everything refers. Thou must ask in another mood, thou must feel it and love it, thou must behold it in a spirit as grand as that by which it exists, ere thou canst know the law. Known it will not be, but gladly beloved and enjoyed.

The simultaneous life throughout the whole body, the equal serving of innumerable ends without the least emphasis or preference to any, but the steady degradation of each to the success of all, allows the understanding no place to work. Nature can only be conceived as existing to a universal and not to a particular end, to a universe of ends, and not to one,—a work of *ecstasy*, to be represented by a circular movement, as intention might be signified by a straight line of definite length. Each effect strengthens every other. There is no revolt in all the kingdoms from the commonweal: no detachment of an individual. Hence the catholic character which makes every leaf an exponent of the world. When we behold the landscape in a poetic spirit, we do not reckon individuals. Nature knows neither palm nor oak, but only vegetable life, which sprouts into forests, and festoons the globe with a garland of grasses and vines.

That no single end may be selected, and nature judged thereby, appears from this, that if man himself be considered as the end, and it be assumed that the final cause of the world is to make holy or wise or beautiful men, we see that it has not succeeded. Read alternately in natural and in civil history, a treatise of astronomy, for example, with a volume of French *Mémoires pour servir*. When we have spent our wonder in computing this wasteful hospitality with which boon nature turns off new firmaments without end into her wide common, as fast as the madrepores make coral,—suns and planets hospitable to souls,—and then shorten the sight to look into this court of Louis Quatorze, and see the game that is played

there,—duke and marshal, abbé and madame,—a gambling table where each is laying traps for the other, where the end is ever by some lie or fetch to outwit your rival and ruin him with this solemn fop in wig and stars,—the king; one can hardly help asking if this planet is a fair specimen of the so generous astronomy, and if so, whether the experiment have not failed, and whether it be quite worth while to make more, and glut the innocent space with so poor an article.

I think we feel not much otherwise if, instead of beholding foolish nations, we take the great and wise men, the eminent souls, and narrowly inspect their biography. None of them seen by himself—and his performance compared with his promise or idea, will justify the cost of that enormous apparatus of means by which this spotted and defective person was at last procured.

To questions of this sort, nature replies, 'I grow.' All is nascent, infant. When we are dazzled with the arithmetic of the savant toiling to compute the length of her line, the return of her curve, we are steadied by the perception that a great deal is doing; that all seems just begun; remote aims are in active accomplishment. We can point nowhere to anything final; but tendency appears on all hands: planet, system, constellation, total nature is growing like a field of maize in July; is becoming somewhat else; is in rapid metamorphosis. The embryo does not more strive to be man, than yonder burr of light we call a nebula tends to be a ring, a comet, a globe, and parent of new stars. Why should not then these messieurs of Versailles strut and plot for tabourets and ribbons, for a season, without prejudice to their faculty to run on better errands by and by?

But nature seems further to reply, 'I have ventured so great a stake as my success, in no single creature. I have not yet arrived at any end. The gardener aims to produce a fine peach or pear, but my aim is the health of the whole tree,—root, stem, leaf, flower, and seed,—and by no means the pampering of a monstrous pericarp at the expense of all the other functions.'

In short, the spirit and peculiarity of that impression nature makes on us, is this, that it does not exist to any one or to any number of particular ends, but to numberless and endless benefit; that there is in it no private will, no rebel leaf or limb, but the whole is oppressed by one superincumbent tendency, obeys that redundancy or excess of life which in conscious beings we call *ecstasy*.

With this conception of the genius or method of nature, let us go back to man. It is true, he pretends to give account of himself to himself, but, at last, what has he to recite but the

fact that there is a Life not to be described or known otherwise than by possession? What account can he give of his essence more than *so it was to be*? The *royal* reason, the Grace of God, seems the only description of our multiform but ever identical fact. There is virtue, there is genius, there is success, or there is not. There is the incoming or the receding of God that is all we can affirm; and we can show neither how nor why. Self-accusation, remorse, and the didactic morals of self-denial and strife with sin, is a view we are constrained by our constitution to take of the fact seen from the platform of action; but seen from the platform of intellection, there is nothing for us but praise and wonder.

The termination of the world in a man, appears to be the last victory of intelligence. The universal does not attract us until housed in an individual. Who heeds the waste abyss of possibility? The ocean is everywhere the same, but it has no character until seen with the shore or the ship. Who would value any number of miles of Atlantic brine bounded by lines of latitude and longitude? Confine it by granite rocks, let it wash a shore where wise men dwell, and it is filled with expression; and the point of greatest interest is where the land and water meet. So must we admire in man, the form of the formless, the concentration of the vast, the house of reason, the cave of memory. See the play of thoughts! what nimble gigantic creatures are these! what saurians, what palaiotheria shall be named with these agile movers? The great Pan of old, who was clothed in a leopard skin to signify the beautiful variety of things and the firmament, his coat of stars,—was but the representative of thee, O rich and various Man! thou palace of sight and sound, carrying in thy senses the morning and the night and the unfathomable galaxy; in thy brain, the geometry of the City of God; in thy heart, the bower of love and the realms of right and wrong. An individual man is a fruit which it cost all the foregoing ages to form and ripen. The history of the genesis or the old mythology repeats itself in the experience of every child. He too is a demon or god thrown into a particular chaos, where he strives ever to lead things from disorder into order. Each individual soul is such, in virtue of its being a power to translate the world into some particular language of its own; if not into a picture, a statue, or a dance,—why, then, into a trade, an art, a science, a mode of living, a conversation, a character, an influence. You admire pictures, but it is as impossible for you to paint a right picture, as for grass to bear apples. But when the genius comes, it makes fingers; it is pliancy, and the power of transferring the affair in the street into oils and colours. Raphael must be born, and Salvator must be born.

There is no attractiveness like that of a new man. The sleepy nations are occupied with their political routine. England, France, and America read Parliamentary Debates, which no high genius now enlivens; and nobody will read them who trusts his own eye: only they who are deceived by the popular repetition of distinguished names. But when Napoleon unrolls his map, the eye is commanded by original power. When Chatham leads the debate, men may well listen, because they must listen. A man, a personal ascendancy is the only great phenomenon. When nature has work to be done, she creates a genius to do it. Follow the great man, and you shall see what the world has at heart in these ages. There is no omen like that.

But what strikes us in the fine genius is that which belongs of right to everyone. A man should know himself for a necessary actor. A link was wanting between two craving parts of nature, and he was hurled into being as the bridge over that yawning need, the mediator betwixt two else unmarriageable facts. His two parents held each of one of the wants, and the union of foreign constitutions in him enables him to do gladly and gracefully what the assembled human race could not have sufficed to do. He knows his materials; he applies himself to his work; he cannot read, or think, or look, but he unites the hitherto separated strands into a perfect cord. The thoughts he delights to utter are the reason of his incarnation. Is it for him to account himself cheap and superfluous, or to linger by the wayside for opportunities? Did he not come into being because something must be done which he and no other is and does? If only he *sees*, the world will be visible enough. He need not study where to stand, nor to put things in favourable lights; in him is the light, from him all things are illuminated to their centre. What patron shall he ask for employment and reward? Hereto was he born, to deliver the thought of his heart from the universe to the universe, to do an office which nature could not forego, nor he be discharged from rendering, and then immerse again into the holy silence and eternity out of which as a man he arose. God is rich, and many more men than one he harbours in his bosom, biding their time and the needs and the beauty of all. Is not this the theory of every man's genius or faculty? Why then goest thou as some Boswell or listening worshipper to this saint or to that? That is the only lese-majesty. Here art thou with whom so long the universe travailed in labour; darest thou think meanly of thyself whom the stalwart Fate brought forth to unite his ragged sides, to shoot the gulf, to reconcile the irreconcilable?

Whilst a necessity so great caused the man to exist, his

health and erectness consist in the fidelity with which he transmits influences from the vast and universal to the point on which his genius can act. The ends are momentary: they are vents for the current of inward life which increases as it is spent. A man's wisdom is to know that all ends are momentary, that the best end must be superseded by a better. But there is a mischievous tendency in him to transfer his thought from the life to the ends, to quit his agency and rest in his acts: the tools run away with the workmen, the human with the divine. I conceive a man as always spoken to from behind, and unable to turn his head and see the speaker. In all the millions who have heard the voice, none ever saw the face. As children in their play run behind each other, and seize one by the ears and make him walk before them, so is the spirit our unseen pilot. That well-known voice speaks in all languages, governs all men, and none ever caught a glimpse of its form. If the man will exactly obey it, it will adopt him, so that he shall not any longer separate it from himself in his thought, he shall seem to be it, he shall be it. If he listen with insatiable ears, richer and greater wisdom is taught him, the sound swells to a ravishing music, he is borne away as with a flood, he becomes careless of his food and of his house, he is the fool of ideas, and leads a heavenly life. But if his eye is set on the things to be done, and not on the truth that is still taught, and for the sake of which the things are to be done, then the voice grows faint, and at last is but a humming in his ears. His health and greatness consist in his being the channel through which heaven flows to earth, in short, in the fulness in which an ecstatic state takes place in him. It is pitiful to be an artist, when, by forbearing to be artists, we might be vessels filled with the divine overflows, enriched by the circulations of omniscience and omnipresence. Are there not moments in the history of heaven when the human race was not counted by individuals, but was only the Influenced, was God in distribution, God rushing into multiiform benefit? It is sublime to receive, sublime to love, but this lust of imparting as from us, this desire to be loved, the wish to be recognized as individuals,—is finite, comes of a lower strain.

Shall I say, then, that, as far as we can trace the natural history of the soul, its health consists in the fulness of its reception,—call it piety, call it veneration—in the fact, that enthusiasm is organized therein. What is best in any work of art, but that part which the work itself seems to require and do; that which the man cannot do again, that which flows from the hour and the occasion, like the eloquence of men in a tumultuous debate? It was always the theory of literature, that the word of a poet was authoritative and final. He was

supposed to be the mouth of a divine wisdom. We rather envied his circumstance than his talent. We, too, could have gladly prophesied standing in that place. We so quote our Scriptures; and the Greeks so quoted Homer, Theognis, Pindar, and the rest. If the theory has receded out of modern criticism, it is because we have not had poets. Whenever they appear, they will redeem their own credit.

This ecstasical state seems to direct a regard to the whole and not to the parts; to the cause and not to the ends; to the tendency, and not to the act. It respects genius and not talent; hope, and not possession: the anticipation of all things by the intellect, and not the history itself; art, and not works of art; poetry, and not experiment; virtue, and not duties.

There is no office or function of man but is rightly discharged by this divine method, and nothing that is not noxious to him if detached from its universal relations. Is it his work in the world to study nature, or the laws of the world? Let him beware of proposing to himself any end. Is it for use? nature is debased, as if one looking at the ocean can remember only the price of fish. Or is it for pleasure? he is mocked: there is a certain infatuating air in woods and mountains which draws on the idler to want and misery. There is something social and intrusive in the nature of all things; they seek to penetrate and overpower, each the nature of every other creature, and itself alone in all modes and throughout space and spirit to prevail, and possess. Every star in heaven is discontented and insatiable. Gravitation and chemistry cannot content them. Ever they woo and court the eye of every beholder. Every man who comes into the world they seek to fascinate and possess, to pass into his mind, for they desire to republish themselves in a more delicate world than that they occupy. It is not enough that they are Jove, Mars, Orion, and the North Star, in the gravitating firmament: they would have such poets as Newton, Herschel, and Laplace, that they may re-exist and re-appear in the finer world of rational souls, and fill that realm with their fame. So is it with all immaterial objects. These beautiful basilisks set their brute, glorious eyes on the eye of every child, and, if they can, cause their nature to pass through his wondering eyes into him, and so all things are mixed.

Therefore man must be on his guard against this cup of enchantments, and must look at nature with a supernatural eye. By piety alone, by conversing with the cause of nature, is he safe and commands it. And because all knowledge is assimilation to the object of knowledge, as the power or genius of nature is ecstasical, so must its science or the description of it be. The poet must be a rhapsodist: his inspiration a sort

of bright casualty: his will in it only the surrender of will to the Universal Power, which will not be seen face to face, but must be received and sympathetically known. It is remarkable that we have out of the deeps of antiquity in the oracles ascribed to the half fabulous Zoroaster, a statement of this fact, which every lover and seeker of truth will recognize. "It is not proper," said Zoroaster, "to understand the Intelligible with vehemence, but if you incline your mind, you will apprehend it: not too earnestly, but bringing a pure and inquiring eye. You will not understand it as when understanding some particular thing, but with the flower of the mind. Things divine are not attainable by mortals who understand sensual things, but only the light-armed arrive at the summit."

And because ecstasy is the law and cause of nature, therefore you cannot interpret it in too high and deep a sense. Nature represents the best meaning of the wisest man. Does the sunset landscape seem to you the place of Friendship—those purple skies and lovely waters the amphitheatre dressed and garnished only for the exchange of thought and love of the purest souls? It is that. All other meanings which base men have put on it are conjectural and false. You cannot bathe twice in the same river, said Heraclitus; and I add, a man never sees the same object twice: with his own enlargement the object acquires new aspects.

Does not the same law hold for virtue? It is vitiated by too much will. He who aims at progress should aim at an infinite, not at a special benefit. The reforms whose fame now fills the land with Temperance, Anti-Slavery, Non-Resistance, No Government, Equal Labour, fair and generous as each appears, are poor bitter things when prosecuted for themselves as an end. To every reform, in proportion to its energy, early disgusts are incident, so that the disciple is surprised at the very hour of his first triumphs, with chagrins, and sickness, and a general distrust: so that he shuns his associates, hates the enterprise which lately seemed so fair, and meditates to cast himself into the arms of that society and manner of life which he had newly abandoned with so much pride and hope. Is it that he attached the value of virtue to some particular practices, as, the denial of certain appetites in certain specified indulgences, and, afterward, found himself still as wicked and as far from happiness in that abstinence, as he had been in the abuse? But the soul can be appeased not by a deed but by a tendency. It is in a hope that she feels her wings. You shall love rectitude and not the disuse of money or the avoidance of trade: an unimpeded mind, and not a monkish diet; sympathy and usefulness, and not hoing or cooping. Tell me not how

great your project is, the civil liberation of the world, its conversion into a Christian church, the establishment of public education, cleaner diet, a new division of labour and of land, laws of love for laws of property;—I say to you plainly there is no end to which your practical faculty can aim, so sacred or so large, that, if pursued for itself, will not at last become carrion and an offence to the nostril. The imaginative faculty of the soul must be fed with objects immense and eternal. Your end should be one inapprehensible to the senses; then will it be a god always approached—never touched; always giving health. A man adorns himself with prayer and love, as an aim adorns an action. What is strong but goodness, and what is energetic but the presence of a brave man? The doctrine in vegetable physiology of the *presence*, or the general influence of any substance over and above its chemical influence as of an alkali or a living plant, is more predicable of man. You need not speak to me, I need not go where you are, that you should exert magnetism on me. Be you only whole and sufficient, and I shall feel you in every part of my life and fortune, and I can as easily dodge the gravitation of the globe as escape your influence.

But there are other examples of this total and supreme influence, besides Nature and the conscience. "From the poisonous tree, the world," say the Brahmins, "two species of fruit are produced, sweet as the waters of life, Love or the society of beautiful souls, and Poetry, whose taste is like the immortal juice of Vishnu." What is Love, and why is it the chief good, but because it is an overpowering enthusiasm? Never self-possessed or prudent, it is all abandonment. Is it not a certain admirable wisdom, preferable to all other advantages, and whereof all others are only secondaries and indemnities? because this is that in which the individual is no longer his own foolish master, but inhales an odorous and celestial air, is wrapped round with awe of the object, blending for the time that object with the real and only good, and consults every omen in nature with tremulous interest. When we speak truly—is not he only unhappy who is not in love? his fancied freedom and self-rule—is it not so much death? He who is in love is wise and is becoming wiser, sees newly every time he looks at the object beloved, drawing from it with his eyes and his mind those virtues which it possesses. Therefore if the object be not itself a living and expanding soul, he presently exhausts it. But the love remains in his mind, and the wisdom it brought him: and it craves a new and higher object. And the reason why all men honour love, is because it looks up and not down; aspires and not despairs.

And what is Genius but finer love, a love impersonal, a love

of the flower and perfection of things, and a desire to draw a new picture or copy of the same? It looks to the cause and life: it proceeds from within outward, whilst Talent goes from without inward. Talent finds its models, methods, and ends, in society, exists for exhibition, and goes to the soul only for power to work. Genius is its own end, and draws its means and the style of its architecture from within, going abroad only for audience, and spectator, as we adapt our voice and phrase to the distance and character of the ear we speak to. All your learning of all literatures would never enable you to anticipate one of its thoughts and expressions, and yet each is natural and familiar as household words. Here about us coils for ever the ancient enigma, so old and so unutterable. Behold! there is the sun, and the rain, and the rocks: the old sun, the old stones. How easy were it to describe all this fitly; yet no word can pass. Nature is a mute, and man, her articulate speaking brother, lo! he also is a mute. Yet when Genius arrives, its speech is like a river; it has no straining to describe, more than there is straining in nature to exist. When thought is best, there is most of it. Genius sheds wisdom like perfume, and advertises us that it flows out of a deeper source than the foregoing silence, that it knows so deeply and speaks so musically, because it is itself a mutation of the thing it describes. It is sun and moon and wave and fire in music, as astronomy is thought and harmony in masses of matter.

What is all history but the work of ideas, a record of the incomputable energy which his infinite aspirations infuse into man? Has any thing grand and lasting been done? Who did it? Plainly not any man, but all men: it was the prevalence and inundation of an idea. What brought the pilgrims here? One man says, civil liberty; another, the desire of founding a church; and a third, discovers that the motive force was plantation and trade. But if the Puritans could rise from the dust, they could not answer. It is to be seen in what they were, and not in what they designed; it was the growth and expansion of the human race, and resembled herein the sequent Revolution, which was not begun in Concord, or Lexington, or Virginia, but was the overflowing of the sense of natural right in every clear and active spirit of the period. Is a man boastful and knowing, and his own master?—we turn from him without hope: but let him be filled with awe and dread before the Vast and the Divine, which uses him glad to be used, and our eye is riveted to the chain of events. What a debt is ours to that old religion which, in the childhood of most of us, still dwelt like a Sabbath morning in the country of New England, teaching privation, self-denial, and sorrow! A man was born not for prosperity, but to suffer for the benefit of

others, like the noble rock-maple which all around our villages bleeds for the service of man. Not praise, not men's acceptance of our doing, but the spirit's holy errand through us absorbed the thought. How dignified was this! How all that is called talents and success, in our noisy capitals, becomes buzz and din before this man-worthiness! How our friendships and the complaisances we use, shame us now! Shall we not quit our companions, as if they were thieves and pot-companions, and betake ourselves to some desert cliff of Mount Katahdin, some unvisited recess in Mooshead Lake, to bewail our innocence and to recover it, and with it the power to communicate again with these sharers of a more sacred idea?

And what is to replace for us the piety of that race? We cannot have theirs: it glides away from us day by day, but we also can bask in the great morning which rises for ever out of the eastern sea, and be ourselves the children of the light. I stand here to say, Let us worship the mighty and transcendent Soul. It is the office, I doubt not, of this age to unnl that adulterous divorce which the superstition of many ages has effected between the intellect and holiness. The lovers of goodness have been one class, the students of wisdom another, as if either could exist in any purity without the other. Truth is always holy, holiness always wise. I will that we keep terms with sin, and a sinful literature and society, no longer, but live a life of discovery and performance. Accept the intellect, and it will accept us. Be the lowly ministers of that pure omniscience, and deny it not before men. It will burn up all profane literature, all base current opinions, all the false powers of the world, as in a moment of time. I draw from nature the lesson of an intimate divinity. Our health and reason as men needs our respect to this fact, against the heedlessness and against the contradiction of society. The sanity of man needs the poise of this immanent force. His nobility needs the assurance of this inexhaustible reserved power. How great soever have been its bounties, they are a drop to the sea whence they flow. If you say, 'the acceptance of the vision is also the act of God.'—I shall not seek to penetrate the mystery, I admit the force of what you say. If you ask, 'How can any rules be given for the attainment of gifts so sublime?' I shall only remark that the solicitations of this spirit, as long as there is life, are never forborne. Tenderly, tenderly, they woo and court us from every object in nature, from every fact in life, from every thought in the mind. The one condition coupled with the gift of truth is its use. That man shall be learned who reduceth his learning to practice. Emanuel Swedenborg affirmed that it was opened to him, "That the spirits who knew truth in this life, but did

it not, at death shall lose their knowledge." "If knowledge," said Ali the Caliph, "callesth unto practice, well; if not, it goeth away." The only way into nature is to enact our best insight. Instantly we are higher poets, and can speak a deeper law. Do what you know, and perception is converted into character, as islands and continents were built by invisible infusories, or, as these forest leaves absorb light, electricity, and volatile gases, and the gnarled oak to live a thousand years is the arrest and fixation of the most volatile and ethereal currents. The doctrine of this Supreme Presence is a cry of joy and exultation. Who shall dare think he has come late into nature, or has missed anything excellent in the past, who seeth the admirable stars of possibility, and the yet untouched continent of hope glittering with all its mountains in the vast West? I praise with wonder this great reality, which seems to drown all things in the deluge of its light. What man seeing this, can lose it from his thoughts, or entertain a meaner subject? The entrance of this into his mind seems to be the birth of man. We cannot describe the natural history of the soul, but we know that it is divine. I cannot tell if these wonderful qualities which house to-day in this mortal frame, shall ever re-assemble in equal activity in a similar frame, or whether they have before had a natural history like that of this body you see before you; but this one thing I know, that these qualities did not now begin to exist, cannot be sick with my sickness, nor buried in any grave; but that they circulate through the Universe: before the world was, they were. Nothing can bar them out, or shut them in, but they penetrate the ocean and land, space and time, form and essence, and hold the key to universal nature. I draw from this faith courage and hope. All things are known to the soul. It is not to be surprised by any communication. Nothing can be greater than it. Let those fear and those fawn who will. The soul is in her native realm, and it is wider than space, older than time, wide as hope, rich as love. Pusillanimity and fear she refuses with a beautiful scorn: they are not for her who putteth on her coronation robes, and goes out through universal love to universal power.

MAN THE REFORMER.

A LECTURE READ BEFORE THE MECHANICS' APPRENTICES' LIBRARY
ASSOCIATION, BOSTON, JANUARY 25, 1841.

MR. PRESIDENT, AND GENTLEMEN,

I WISH to offer to your consideration some thoughts on the particular and general relations of man as a reformer. I shall assume that the aim of each young man in this association is the very highest that belongs to a rational mind. Let it be granted, that our life, as we lead it, is common and mean; that some of those offices and functions for which we were mainly created are grown so rare in society, that the memory of them is only kept alive in old books and in dim traditions; that prophets and poets, that beautiful and perfect men, we are not now, no, nor have even seen such; that some sources of human instruction are almost unnamed and unknown among us; that the community in which we live will hardly bear to be told that every man should be open to ecstasy or a divine illumination, and his daily walk elevated by intercourse with the spiritual world. Grant all this, as we must, yet I suppose none of my auditors will deny that we ought to seek to establish ourselves in such disciplines and courses as will deserve that guidance and clearer communication with the spiritual nature. And further, I will not dissemble my hope, that each person whom I address has felt his own call to cast aside all evil customs, timidities, and limitations, and to be in his place a free and helpful man, a reformer, a benefactor, not content to slip along through the world like a footman or a spy, escaping by his nimbleness and apologies as many knocks as he can, but a brave and upright man, who must find or cut a straight road to everything excellent in the earth, and not only go honourably himself, but make it easier for all who follow him, to go in honour and with benefit.

In the history of the world the doctrine of Reform had never such scope as at the present hour. Lutherans, Heretics, Jesuits, Monks, Quakers, Knox, Wesley, Swedenborg, Bentham, in their accusations of society, all respected something—church or state, literature or history, domestic usages, the market town, the dinner table, coined money. But now all these and all things else hear the trumpet, and must rush to judgment—Christianity, the laws, commerce, schools, the farm, the laboratory; and not a kingdom, town, statute, rite, calling, man, or woman, but is threatened by the new spirit.

What if some of the objections whereby our institutions are

assailed are extreme and speculative, and the reformers tend to idealism; that only shows the extravagance of the abuses which have driven the mind into the opposite extreme. It is when your facts and persons grow unreal and fantastic by too much falsehood, that the scholar flies for refuge to the world of ideas, and aims to recruit and replenish nature from that source. Let ideas establish their legitimate sway again in society, let life be fair and poetic, and the scholars will gladly be lovers, citizens, and philanthropists.

It will afford no security from the new ideas, that the old nations, the laws of centuries, the property and institutions of a hundred cities, are built on other foundations. The demon of reform has a secret door into the heart of every lawmaker, of every inhabitant of every city. The fact, that a new thought and hope have dawned in your breasts, should apprise you that in the same hour a new light broke in upon a thousand private hearts. That secret which you would fain keep—as soon as you go abroad, lo! there is one standing on the doorstep, to tell you the same. There is not the most bronzed and sharpened money-catcher, who does not, to your consternation, almost, quail and shake the moment he hears a question prompted by the new ideas. We thought he had some semblance of ground to stand upon, that such as he at least would die hard; but he trembles and flees. Then the scholar says, 'Cities and coaches shall never impose on me again; for, behold every solitary dream of mine is rushing to fulfilment. That fancy I had, and hesitated to utter because you would laugh—the broker, the attorney, the market-man, are saying the same thing. Had I waited a day longer to speak, I had been too late. Behold, State Street thinks, and Wall Street doubts, and begins to prophecy!'

It cannot be wondered at, that this general inquest into abuses should arise in the bosom of society, when one considers the practical impediments that stand in the way of virtuous young men. The young man, on entering life, finds the way to lucrative employments blocked with abuses. The ways of trade are grown selfish to the borders of theft, and supple to the borders (if not beyond the borders) of fraud. The employments of commerce are not intrinsically unfit for a man, or less genial to his faculties, but these are now in their general course so vitiated by derelictions and abuses at which all connive, that it requires more vigour and resources than can be expected of every young man, to right himself in them; he is lost in them; he cannot move hand or foot in them. Has he genius and virtue? the less does he find them fit for him to grow in, and if he would thrive in them, he must sacrifice all the brilliant dreams of boyhood and youth as dreams; he must

forget the prayers of his childhood; and must take on him the harness of routine and obsequiousness. If not so minded, nothing is left him but to begin the world anew, as he does who puts the spade into the ground for food. We are all implicated, of course, in this charge; it is only necessary to ask a few questions as to the progress of the articles of commerce from the fields where they grew, to our houses, to become aware that we eat and drink and wear perjury and fraud in a hundred commodities. How many articles of daily consumption are furnished us from the West Indies; yet it is said, that, in the Spanish islands, the venality of the officers of the government has passed into usage, and that no article passes into our ships which has not been fraudulently cheapened. In the Spanish islands, every agent or factor of the Americans, unless he be a consul, has taken oath that he is a Catholic, or has caused a priest to make that declaration for him. The abolitionist has shown us our dreadful debt to the southern negro. In the island of Cuba, in addition to the ordinary abominations of slavery, it appears, only men are bought for the plantations, and one dies in ten every year, of these miserable bachelors, to yield us sugar. I leave for those who have the knowledge the part of sifting the oaths of our custom-houses; I will not inquire into the oppression of the sailors; I will not pry into the usages of our retail trade. I content myself with the fact, that the general system of our trade (apart from the blacker traits, which, I hope, are exceptions denounced and unshared by all reputable men), is a system of selfishness; is not dictated by the high sentiments of human nature; is not measured by the exact law of reciprocity; much less by the sentiments of love and heroism, but is a system of distrust, of concealment, of superior keenness, not of giving but of taking advantage. It is not that which a man delights to unlock to a noble friend; which he meditates on with joy and self-approval in his hour of love and aspiration; but rather what he then puts out of sight, only showing the brilliant result, and atoning for the manner of acquiring, by the manner of expending it. I do not charge the merchant or the manufacturer. The sins of our trade belong to no class; to no individual. One plucks, one distributes, one eats. Everybody partakes, everybody confesses—with cap and knee volunteers his confession, yet none feels himself accountable. He did not create the abuse; he cannot alter it. What is he? an obscure private person who must get his bread. That is the vice—that no one feels himself called to act for man, but only as a fraction of man. It happens therefore that all such ingenuous souls as feel within themselves the irrepressible strivings of a noble aim, who by the law of their nature must

act simply, find these ways of trade unfit for them, and they come forth from it. Such cases are becoming more numerous every year.

But by coming out of trade you have not cleared yourself. The trail of the serpent reaches into all the lucrative professions and practices of man. Each has its own wrongs. Each finds a tender and very intelligent conscience a disqualification for success. Each requires of the practitioner a certain shutting of the eyes, a certain dapperness and compliance, an acceptance of customs, a sequestration from the sentiments of generosity and love, a compromise of private opinion and lofty integrity. Nay, the evil custom reaches into the whole institution of property, until our laws which establish and protect it, seem not to be the issue of love and reason, but of selfishness. Suppose a man is so unhappy as to be born a saint, with keen perceptions, but with the conscience and love of an angel, and he is to get his living in the world; he finds himself excluded from all lucrative works; he has no farm, and he cannot get one; for, to earn money enough to buy one, requires a sort of concentration toward money, which is the selling himself for a number of years, and to him the present hour is as sacred and inviolable as any future hour. Of course, whilst another man has no land, my title to mine, your title to yours, is at once vitiated. Inextricable seem to be the twinings and tendrils of this evil, and we all involve ourselves in it the deeper by forming connections, by wives and children, by benefits and debts.

Considerations of this kind have turned the attention of many philanthropic and intelligent persons to the claims of manual labour, as a part of the education of every young man. If the accumulated wealth of the past generation is thus tainted—no matter how much of it is offered to us—we must begin to consider if it were not the nobler part to renounce it, and to put ourselves into primary relations with the soil and nature, and abstaining from whatever is dishonest and unclean, to take each of us bravely his part, with his own hands, in the manual labour of the world.

But it is said, 'What! will you give up the immense advantages reaped from the division of labour, and set every man to make his own shoes, bureau, knife, waggon, sail, and needle? This would be to put men back into barbarism by their own act.' I see no instant prospect of a virtuous revolution; yet I confess, I should not be pained at a change which threatened a loss of some of the luxuries or conveniences of society, if it proceeded from a preference of the agricultural life out of the belief, that our primary duties as men could be better discharged in that calling. Who could regret to see a high conscience and a purer taste exercising a sensible effect

of state? It is easy to see that the inconvenience would last but a short time. This would be great action, which always opens the eyes of men. When many persons shall have done this, when the majority shall admit the necessity of reform in all these institutions, their abuses will be redressed, and the way will be open again to the advantages which arise from the division of labour, and a man may select the fittest employment for his peculiar talent again, without compromise.

But quite apart from the emphasis which the times give to the doctrine, that the manual labour of society ought to be shared among all the members, there are reasons proper to every individual, why he should not be deprived of it. The use of manual labour is one which never grows obsolete, and which is inapplicable to no person. A man should have a farm or a mechanical craft for his culture. We must have a basis for our higher accomplishments, our delicate entertainments of poetry and philosophy, in the work of our hands. We must have an antagonism in the tough world for all the variety of our spiritual faculties, or they will not be born. Manual labour is the study of the external world. The advantage of riches remains with him who procured them, not with the heir. When I go into my garden with a spade, and dig a bed, I feel such an exhilaration and health, that I discover that I have been defrauding myself all this time in letting others do for me what I should have done with my own hands. But not only health, but education is in the work. Is it possible that I who get indefinite quantities of sugar, hominy, cotton, buckets, crockery ware, and letter paper, by simply signing my name once in three months to a cheque in favour of John Smith and Co. traders, get the fair share of exercise to my faculties by that act, which nature intended for me in making all these far-fetched matters important to my comfort? It is Smith himself, and his carriers, and dealers, and manufacturers; it is the sailor, the hide-drogher, the butcher, the negro, the hunter, and the planter, who have intercepted the sugar of the sugar, and the cotton of the cotton. They have got the education, I only the commodity. This were all very well if I were necessarily absent, being detained by work of my own, like theirs, work of the same faculties; then should I be sure of my hands and feet, but now I feel some shame before my wood-chopper, my ploughman, and my cook, for they have some sort of self-sufficiency, they can contrive without my aid to bring the day and year round, but I depend on them, and have not earned by use a right to my arms and feet.

Consider further the difference between the first and second

owner of property. Every species of property is preyed on by its own enemies, as iron by rust; timber by rot; cloth by moths; provisions by mould, putridity, or vermin; money by thieves; an orchard by insects; a planted field by weeds and the inroad of cattle; a stock of cattle by hunger: a road by rain and frost; a bridge by freshets. And whoever takes any of these things into his possession, takes the charge of defending them from this troop of enemies, or of keeping them in repair. A man who supplies his own want, who builds a raft or a boat to go a fishing, finds it easy to caulk it, or put in a thole-pin, or mend the rudder. What he gets only as fast as he wants for his own ends, does not embarrass him, or take away his sleep with looking after. But when he comes to give all the goods he has year after year collected, in one estate to his son, house, orchard, ploughed land, cattle, bridges, hardware, wooden-ware, carpets, cloths, provisions, books, money, and cannot give him the skill and experience which made or collected these, and the method and place they have in his own life, the son finds his hands full—not to use these things—but to look after them and defend them from their natural enemies. To him they are not means, but masters. Their enemies will not remit; rust, mould, vermin, rain, sun, freshet, fire, all seize their own, fill him with vexation, and he is converted from the owner into a watchman or a watch-dog to this magazine of old and new chattels. What a change! Instead of the masterly good humour, and sense of power, and fertility of resource in himself; instead of those strong and learned hands, those piercing and learned eyes, that supple body, and that mighty and prevailing heart, which the father had, whom nature loved and feared, whom snow and rain, water and land, beast and fish, seemed all to know and to serve, we have now a puny, protected person, guarded by walls and curtains, stoves and down beds, coaches, and men servants and women-servants from the earth and the sky, and who, bred to depend on all these, is made anxious by all that endangers those possessions, and is forced to spend so much time in guarding them, that he has quite lost sight of their original use, namely, to help him to his ends—to the prosecution of his love; to the helping of his friend, to the worship of his God, to the enlargement of his knowledge, to the serving of his country, to the indulgence of his sentiment, and he is now what is called a rich man—the menial and runner of his riches.

Hence it happens that the whole interest of history lies in the fortunes of the poor. Knowledge, Virtue, Power are the victories of man over his necessities, his march to the dominion of the world. Every man ought to have this opportunity to conquer the world for himself. Only such persons interest us

Spartans, Romans, Saracens, English, Americans, who have stood in the jaws of need, and have by their own wit and might extricated themselves, and made man victorious.

I do not wish to overstate this doctrine of labour, or insist that every man should be a farmer, any more than that every man should be a lexicographer. In general, one may say, that the husbandman's is the oldest, and most universal profession, and that where a man does not yet discover in himself any fitness for one work more than another, this may be preferred. But the doctrine of the Farm is merely this, that every man ought to stand in primary relations with the work of the world, ought to do it himself, and not to suffer the accident of his having a purse in his pocket, or his having been bred to some dishonourable and injurious craft, to sever him from those duties; and for this reason, that labour is God's education; that he only is a sincere learner, he only can become a master, who learns the secrets of labour, and who by real cunning extorts from nature its sceptre.

Neither would I shut my ears to the plea of the learned professions, of the poet, the priest, the lawgiver, and men of study generally; namely, that in the experience of all men of that class, the amount of manual labour which is necessary to the maintenance of a family, indisposes and disqualifies for intellectual exertion. I know it often, perhaps usually, happens, that where there is a fine organization apt for poetry and philosophy, that individual finds himself compelled to wait on his thoughts, to waste several days that he may enhance and glorify one; and is better taught by a moderate and dainty exercise, such as rambling in the fields, rowing, skating, hunting, than by the downright drudgery of the farmer and the smith. I would not quite forget the venerable counsel of the Egyptian mysteries, which declared that "there were two pairs of eyes in man, and it is requisite that the pair which are beneath should be closed, when the pair that are above them perceive, and that when the pair above are closed, those which are beneath should be opened." Yet I will suggest that no separation from labour can be without some loss of power and of truth to the seer himself; that, I doubt not, the faults and vices of our literature and philosophy, their too great fineness, effeminacy, and melancholy, are attributable to the enervated and sickly habits of the literary class. Better that the book should not be quite so good, and the bookmaker abler and better, and not himself often a ludicrous contrast to all that he has written.

But granting that for ends so sacred and dear, some relaxation must be had, I think, that if a man find in himself any strong bias to poetry, to art, to the contemplative life, drawing

him to these things with a devotion incompatible with good husbandry, that man ought to reckon early with himself, and, respecting the compensations of the Universe, ought to ransom himself from the duties of economy, by a certain rigour and privation in his habits. For privileges so rare and grand, let him not stint to pay a great tax. Let him be a cœnobite, a pauper, and if need be, celibate also. Let him learn to eat his meals standing, and to relish the taste of fair water and black bread. He may leave to others the costly conveniences of housekeeping, and large hospitality, and the possession of works of art. Let him feel that genius is a hospitality, and that he who can create works of art needs not collect them. He must live in a chamber, and postpone his self-indulgence, forewarned and forearmed against that frequent misfortune of men of genius—the taste for luxury. This is the tragedy of genius—attempting to drive along the ecliptic with one horse of the heavens and one horse of the earth, there is only discord and ruin and downfall to chariot and charioteer.

*the first sign
to reform.*

The duty that every man should assume his own vows, should call the institutions of society to account, and examine their fitness to him, gains in emphasis, if we look at our modes of living. Is our housekeeping sacred and honourable? Does it raise and inspire us, or does it cripple us instead? I ought to be armed by every part and function of my household, by all my social function, by my economy, by my feasting, by my voting, by my traffic. Yet I am almost no party to any of these things. Custom does it for me, gives me no power therefrom, and runs me in debt to boot. We spend our incomes for paint and paper, for a hundred trifles, I know not what, and not for the things of a man. Our expense is almost all for conformity. It is for cake that we run in debt; 'tis not the intellect, not the heart, not beauty, not worship, that costs so much. Why needs any man be rich? Why must he have horses, fine garments, handsome apartments, access to public houses and places of amusement? Only for want of thought. Give his mind a new image, and he flees into a solitary garden or garret to enjoy it, and is richer with that dream, than the fee of a county could make him. But we are first thoughtless, and then find that we are moneyless. We are first sensual, and then must be rich. We dare not trust our wit for making our house pleasant to our friend, and so we buy ice-creams. He is accustomed to carpets, and we have not sufficient character to put floor-cloths out of his mind whilst he stays in the house, and so we pile the floor with carpets. Let the house rather be a temple of the Furies of Lacedæmon, formidable and holy to all, which none but a

Spartan may enter or so much as behold. As soon as there is faith, as soon as there is society, comfits and cushions will be left to slaves. Expense will be inventive and heroic. We shall eat hard and lie hard, we shall dwell like the ancient Romans in narrow tenements, whilst our public edifices, like theirs, will be worthy for their proportion of the landscape in which we set them, for conversation, for art, for music, for worship. We shall be rich to great purposes; poor only for selfish ones.

Now what help for these evils? How can the man who has learned but one art, procure all the conveniences of life honestly? Shall we say all we think?—Perhaps with his own hands. Suppose he collects or makes them ill; yet he has learned their lesson. If he cannot do that.—Then perhaps he can go without. Immense wisdom and riches are in that. It is better to go without, than to have them at too great a cost. Let us learn the meaning of economy. Economy is a high, humane office, a sacrament, when its aim is grand; when it is the prudence of simple tastes, when it is practised for freedom, or love, or devotion. Much of the economy which we see in houses, is of a base origin, and is best kept out of sight. Parched corn eaten to-day that I may have roast fowl to my dinner on Sunday, is a baseness; but parched corn and a house with one apartment, that I may be free of all perturbations, that I may be serene and docile to what the mind shall speak, and girt and road-ready for the lowest mission of knowledge or goodwill, is frugality for gods and heroes.

Can we not learn the lesson of self-help? Society is full of infirm people, who incessantly summon others to serve them. They contrive everywhere to exhaust for their single comfort the entire means and appliances of that luxury to which our invention has yet attained. Sofas, ottomans, stoves, wine, game-fowl, spices, perfumes, rides, the theatre, entertainments,—all these they want, they need, and whatever can be suggested more than these, they crave also, as if it was the bread which should keep them from starving; and if they miss any-one, they represent themselves as the most wronged and most wretched persons on earth. One must have been born and bred with them to know how to prepare a meal for their learned stomach. Meantime, they never bestir themselves to serve another person; not they! they have a great deal more to do for themselves than they can possibly perform, nor do they once perceive the cruel joke of their lives, but the more odious they grow, the sharper is the tone of their complaining and craving. Can anything be so elegant as to have few wants and to serve them one's self, so as to have somewhat left to give, instead of being always prompt to grab? It is more

elegant to answer one's own needs, than to be richly served; inelegant perhaps it may look to-day, and to a few, but it is an elegance for ever and to all.

I do not wish to be absurd and pedantic in reform. I do not wish to push my criticism on the state of things around me to that extravagant mark, that shall compel me to suicide, or to an absolute isolation from the advantages of civil society. If we suddenly plant our foot, and say,—I will neither eat nor drink nor wear nor touch any food or fabric which I do not know to be innocent, or deal with any person whose whole manner of life is not clear and rational, we shall stand still. Whose is so? Not mine; not thine; not his. But I think we must clear ourselves each one by the interrogation, whether we have earned our bread to-day by the hearty contribution of our energies to the common benefit? and we must not cease to tend to the correction of these flagrant wrongs, by laying one stone aright every day.

But the idea which now begins to agitate society has a wider scope than our daily employments, our households, and the institutions of property. We are to revise the whole of our social structure, the state, the school, religion, marriage, trade, science, and explore their foundations in our own nature; we are to see that the world not only fitted the former men, but fits us, and to clear ourselves of every usage which has not its roots in our own mind. What is man born for but to be a Reformer, a Re-maker of what man has made; a renouncer of lies; a restorer of truth and good, imitating that great Nature which embosoms us all, and which sleeps no moment on an old past, but every hour repairs herself, yielding us every morning a new day, and with every pulsation a new life? Let him renounce everything which is not true to him, and put all his practices back on their first thoughts, and do nothing for which he has not the whole world for his reason. If there are inconveniences, and what is called ruin in the way, because we have so enervated and maimed ourselves, yet it would be like dying of perfumes to sink in the effort to reattach the deeds of every day to the holy and mysterious recesses of life.

The power, which is at once spring and regulator in all efforts of reform, is the conviction that there is an infinite worthiness in man which will appear at the call of worth, and that all particular reforms are the removing of some impediment. Is it not the highest duty that man should be honoured in us? I ought not to allow any man, because he has broad lands, to feel that he is rich in my presence. I ought to make him feel that I can do without his riches, that I cannot be bought—neither by comfort—neither by pride—and though I

be utterly penniless, and receiving bread from him, that he is the poor man beside me. And if, at the same time, a woman or a child discovers a sentiment of piety, or a juster way of thinking than mine, I ought to confess it by my respect and obedience, though it go to alter my whole way of life.

The Americans have many virtues, but they have not Faith and Hope. I know no two words whose meaning is more lost sight of. We use these words as if they were as obsolete as Selah and Amen. And yet they have the broadest meaning, and the most cogent application to Boston in 1841. The Americans have no faith. They rely on the power of a dollar; they are deaf to a sentiment. They think you may talk the north wind down as easily as raise society; and no class more faithless than the scholars or intellectual men. Now if I talk with a sincere wise man, and my friend, with a poet, with a conscientious youth who is still under the dominion of his own wild thoughts, and not yet harnessed in the team of society to drag with us all in the ruts of custom, I see at once how paltry is all this generation of unbelievers, and what a house of cards their institutions are, and I see what one brave man, what one great thought executed might effect. I see that the reason of the distrust of the practical man in all theory, is his inability to perceive the means whereby we work. Look, he says, at the tools with which this world of yours is to be built. As we cannot make a planet, with atmosphere, rivers, and forests, by means of the best carpenters' or engineers' tools, with chemist's laboratory and smith's forge to boot—so neither can we ever construct that heavenly society you prate of, out of foolish, sick, selfish men and women, such as we know them to be. But the believer not only beholds his heaven to be possible, but already to begin to exist—not by the men or materials the statesman uses, but by men transfigured and raised above themselves by the power of principles. To principles something else is possible that transcends all the power of expedients.

Every great and commanding moment in the annals of the world is the triumph of some enthusiasm. The victories of the Arabs after Mahomet, who, in a few years, from a small and mean beginning, established a larger empire than that of Rome, is an example. They did they knew not what. The naked Derar, horsed on an idea, was found an overmatch for a troop of Roman cavalry. The women fought like men, and conquered the Roman men. They were miserably equipped, miserably fed. They were Temperance troops. There was neither brandy nor flesh needed to feed them. They conquered Asia, and Africa, and Spain, on barley. The Caliph Omar's walking-stick struck more terror into those who saw it, than

another man's sword. His diet was barley bread; his sauce was salt; and oftentimes by way of abstinence he ate his bread without salt. His drink was water. His palace was built of mud; and when he left Medina to go to the conquest of Jerusalem, he rode on a red camel, with a wooden platter hanging at his saddle, with a bottle of water and two sacks, one holding barley, and the other dried fruits.

*important
Love*

But there will dawn ere long on our politics, on our modes of living, a nobler morning than that Arabian faith, in the sentiment of love. This is the one remedy for all ills, the panacea of nature. We must be lovers, and at once the impossible becomes possible. Our age and history, for these thousand years, has not been the history of kindness, but of selfishness. Our distrust is very expensive. The money we spend for courts and prisons is very ill laid out. We make, by distrust, the thief, and burglar, and incendiary, and by our court and jail we keep him so. An acceptance of the sentiment of love throughout Christendom for a season, would bring the felon and the outcast to our side in tears, with the devotion of his faculties to our service. See this wide society of labouring men and women. We allow ourselves to be served by them, we live apart from them, and meet them without a salute in the streets. We do not greet their talents, nor rejoice in their good fortune, nor foster their hopes, nor in the assembly of the people vote for what is dear to them. Thus we enact the part of the selfish noble and king from the foundation of the world. See, this tree always bears one fruit. In every household, the peace of a pair is poisoned by the malice, slyness, indolence, and alienation of domestics. Let any two matrons meet, and observe how soon their conversation turns on the troubles from their "help," as our phrase is. In every knot of labourers, the rich man does not feel himself among his friends—and at the polls he finds them arrayed in a mass in distinct opposition to him. We complain that the politics of masses of the people are controlled by designing men, and led in opposition to manifest justice and the common weal, and to their own interest. But the people do not wish to be represented or ruled by the ignorant and base. They only vote for these, because they were asked with the voice and semblance of kindness. They will not vote for them long. They inevitably prefer wit and probity. To use an Egyptian metaphor, it is not their will for any long time "to raise the nails of wild beasts, and to depress the heads of the sacred birds." Let our affection flow out to our fellows; it would operate in a day the greatest of all revolutions. It is better to work on institutions by the sun than by the wind. The state must consider the poor man, and all voices must speak for him. Every child that is born must have a

just chance for his bread. Let the amelioration in our laws of property proceed from the concession of the rich, not from the grasping of the poor. Let us begin by habitual imparting. Let us understand that the equitable rule is, that no one should take more than his share, let him be ever so rich. Let me feel that I am to be a lover. I am to see to it that the world is the better for me, and to find my reward in the act.

Love would put a new face on this weary old world in which we dwell as pagans and enemies too long, and it would warm the heart to see how fast the vain diplomacy of statesmen, the impotence of armies, and navies, and lines of defence, would be superseded by this unarmed child. Love will creep where it cannot go, will accomplish that by imperceptible methods—being its own lever, fulcrum, and power—which force could never achieve. Have you not seen in the woods, in a late autumn morning, a poor fungus or mushroom—a plant without any solidity, nay, that seemed nothing but a soft mush or jelly,—by its constant, total, and inconceivably gentle pushing, manage to break its way up through the frosty ground, and actually to lift a hard crust on its head? It is the symbol of the power of kindness. The virtue of this principle in human society in application to great interests is obsolete and forgotten. Once or twice in history it has been tried in illustrious instances, with signal success. This great, overgrown, dead Christendom of ours still keeps alive at least the name of a lover of mankind. But one day all men will be lovers; and every calamity will be dissolved in the universal sunshine.

Will you suffer me to add one trait more to this portrait of man the reformer? The mediator between the spiritual and the actual world should have a great prospective prudence. An Arabian poet describes his hero by saying,

"Sunshine was he
In the winter day;
And in the midsummer
Coolness and shade."

He who would help himself and others, should not be a subject of irregular and interrupted impulses of virtue, but a continent, persisting, immovable person—such as we have seen a few scattered up and down in time for the blessing of the world; men who have in the gravity of their nature a quality which answers to the fly-wheel in a mill, which distributes the motion equably over all the wheels, and hinders it from falling unequally and suddenly in destructive shocks. It is better that joy should be spread over all the day in the form of strength, than that it should be concentrated into ecstasies, full of danger and followed by reactions. There is a sublime

prudence, which is the very highest that we know of man, which, believing in a vast future—sure of more to come than is yet seen—postpones always the present hour to the whole life; postpones talent to genius, and special results to character. As the merchant gladly takes money from his income to add to his capital, so is the great man very willing to lose particular powers and talents, so that he gain in the elevation of his life. The opening of the spiritual senses disposes men ever to greater sacrifices, to leave their signal talents, their best means and skill of procuring a present success, their power and their fame—to cast all things behind, in the insatiable thirst for divine communications. A purer fame, a greater power rewards the sacrifice. It is the conversion of our harvest into seed. As the farmer casts into the ground the finest ears of his grain, the time will come when we too shall hold nothing back, but shall eagerly convert more than we now possess into means and powers, when we shall be willing to sow the sun and the moon for seeds.

the highest sacrifice

Reform a nobler sacrifice later on, the offering of the substance

LECTURE ON THE TIMES.

READ AT THE MASONIC TEMPLE, BOSTON, DEC. 2, 1841.

THE Times, as we say—or the present aspects of our social state, the Laws, Divinity, Natural Science, Agriculture, Art, Trade, Letters, have their root in an invisible spiritual reality. To appear in these aspects, they must first exist, or have some necessary foundation. Beside all the small reasons we assign, there is a great reason for the existence of every extant fact; a reason which lies grand and immovable, often unsuspected, behind it in silence. The Times are the masquerade of the eternities; trivial to the dull, tokens of noble and majestic agents to the wise; the receptacle in which the Past leaves its history; the quarry out of which the genius of to-day is building up the Future. The Times—the nations, manners, institutions, opinions, votes, are to be studied as omens, as sacred leaves, whereon a weighty sense is inscribed, if we have the wit and the love to search it out. Nature itself seems to propound to us this topic, and to invite us to explore the meaning of the conspicuous facts of the day. Everything that is popular, it has been said, deserves the attention of the philosopher: and this for the obvious reason, that although it may not be of any worth in itself, yet it characterizes the people.

Here is very good matter to be handled, if we are skilful; an abundance of important practical questions which it behoves us to understand. Let us examine the pretensions of the attacking and defending parties. Here is this great fact of Conservatism, entrenched in its immense redoubts, with Himmaleh for its front, and Atlas for its flank, and Andes for its rear, and the Atlantic and Pacific seas for its ditches and trenches, which has planted its crosses, and crescents, and stars and stripes, and various signs and badges of possession, over every rood of the planet, and says, 'I will hold fast; and to whom I will, will I give; and whom I will, will I exclude and starve:' so says Conservatism; and all the children of men attack the colossus in their youth, and all, or all but a few, bow before it when they are old. A necessity not yet commanded, a negative imposed on the will of man by his condition, a deficiency in his force, is the foundation on which it rests. Let this side be fairly stated. Meantime, on the other part, arises Reform, and offers the sentiment of Love as an overmatch to this material might. I wish to consider well this affirmative side, which has a loftier port and reason than heretofore, which encroaches on the other every day, puts it out

of countenance, out of reason, and out of temper, and leaves it nothing but silence and possession.

The fact of aristocracy, with its two weapons of wealth and manners, is as commanding a feature of the nineteenth century, and the American republic, as of old Rome, or modern England. The reason and influence of wealth, the aspect of philosophy and religion, and the tendencies which have acquired the name of Transcendentalism in Old and New England; the aspect of poetry, as the exponent and interpretation of these things; the fuller development and the freer play of Character as a social and political agent;—these and other related topics will in turn come to be considered.

But the subject of the Times is not an abstract question. We talk of the world, but we mean a few men and women. If you speak of the age, you mean your own platoon of people, as Milton and Dante painted in colossal their platoons, and called them Heaven and Hell. In our idea of progress, we do not go out of this personal picture. We do not think the sky will be bluer, or honey sweeter, or our climate more temperate; but only that our relation to our fellows will be simpler and happier. What is the reason to be given for this extreme attraction which *persons* have for us, but that they are the Age? they are the results of the Past; they are the heralds of the Future. They indicate—these witty, suffering, blushing, intimidating figures of the only race in which there are individuals or changes, how far on the Fate has gone, and what it drives at. As trees make scenery, and constitute the hospitality of the landscape, so persons are the world to persons. A cunning mystery by which the Great Desert of thoughts and of planets takes this engaging form, to bring, as it would seem, its meanings nearer to the mind. Thoughts walk and speak, and look with eyes at me, and transport me into new and magnificent scenes. These are the pungent instructors who thrill the heart of each of us, and make all other teaching formal and cold. How I follow them with aching heart, with pining desire! I count myself nothing before them. I would die for them with joy. They can do what they will with me. How they lash us with those tongues! How they make the tears start, make us blush and turn pale, and lap us in Elysium to soothing dreams, and castles in the air! By tones of triumph; of dear love; by threats; by pride that freezes; these have the skill to make the world look bleak and inhospitable, or seem the nest of tenderness and joy. I do not wonder at the miracles which poetry attributes to the music of Orpheus, when I remember what I have experienced from the varied notes of the human voice. They are an incalculable energy which countervails all other forces in nature.

strong man could be born into it, he would immediately redeem and replace it. A personal ascendancy—that is the only fact much worth considering. I remember, some years ago, somebody shocked a circle of friends of order here in Boston, who supposed that our people were identified with their religious denominations, by declaring that an eloquent man—let him be of what sect soever—would be ordained at once in one of our metropolitan churches. To be sure he would; and not only in ours, but in any church, mosque, or temple, on the planet; but he must be eloquent, able to supplant our method and classification, by the superior beauty of his own. Every fact we have was brought here by some person; and there is none that will not change and pass away before a person, whose nature is broader than the person which the fact in question represents. And so I find the Age walking about in happy and hopeful natures, in strong eyes, and pleasant thoughts, and think I read it nearer and truer so, that in the statute-book, or in the investments of capital, which rather celebrate with mournful music the obsequies of the last age. In the brain of a fanatic; in the wild hope of a mountain boy, called by city boys very ignorant, because they do not know what his hope has certainly apprised him shall be; in the love-glance of a girl; in the hair-splitting conscientiousness of some eccentric person, who has found some new scruple to embarrass himself and his neighbours withal; is to be found that which shall constitute the times to come, more than in the now organized and accredited oracles. For, whatever is affirmative and now advancing, contains it. I think that only is real, which men love and rejoice in; not what they tolerate, but what they choose; what they embrace and avow, and not the things which chill, benumb, and terrify them.

And so why not draw for these times a portrait gallery? Let us paint the painters. Whilst the Daguerreotypist, with camera-obscura and silver plate, begins now to traverse the land, let us set up our Camera also, and let the sun paint the people. Let us paint the agitator, and the man of the old school, and the member of Congress, and the college-professor, the formidable editor, the priest, and reformer, the contemplative girl, and the fair aspirant for fashion and opportunities, the woman of the world who has tried and knows;—let us examine how well she knows. Could we indicate the indicators, indicate those who most accurately represent every good and evil tendency of the general mind, in the just order which they take on this canvas of Time; so that all witnesses should recognize a spiritual law, as each well known form flitted for

as well as to condemn; souls of as lofty a port, as any in Greek or Roman fame, might appear; men of great heart, and strong hand, and of persuasive speech; subtle thinkers, and men of wide sympathy, and an apprehension which looks over all history, and everywhere recognizes its own. To be sure, there will be fragments and hints of men, more than enough: bloated promises, which end in nothing or little. And then truly great men, but with some defect in their composition, which neutralizes their whole force. Here is a Damascus blade, such as you may search through nature in vain to parallel, laid up on the shelf in some village to rust and ruin. And how many seem not quite available for that idea which they represent? Now and then comes a bolder spirit, I should rather say, a more surrendered soul, more informed and led by God, which is much in advance of the rest, quite beyond their sympathy, but predicts what shall soon be the general fulness; as when we stand by the seashore, whilst the tide is coming in, a wave comes up the beach far higher than any foregoing one, and recedes; and for a long while none comes up to that mark; but after some time the whole sea is there and beyond it.

But we are not permitted to stand as spectators of the pageant which the times exhibit; we are parties also, and have a responsibility which is not to be declined. A little while this interval of wonder and comparison is permitted us, but to the end that we shall play a manly part. As the solar system moves forward in the heavens, certain stars open before us, and certain stars close up behind us; so is man's life. The reputations that were great and inaccessible change and tarnish. How great were once Lord Bacon's dimensions! he is now reduced almost to the middle height; and many another star has turned out to be a planet or an asteroid: only a few are the fixed stars which have no parallax, or none for us. The change and decline of old reputations are the gracious marks of our own growth. Slowly, like light of morning, it steals on us, the new fact, that we, who were pupils or aspirants, are now society: do compose a portion of that head and heart we are wont to think worthy of all reverence and heed. We are the representatives of religion and intellect, and stand in the light of Ideas, whose rays stream through us to those younger and more in the dark. What further relations we sustain, what new lodges we are entering, is now unknown. To-day is a king in disguise. To-day always looks mean to the thought.

to-days. Let us not be so deceived. Let us unmask the king as he passes. Let us not inhabit times of wonderful and various promise without divining their tendency. Let us not see the foundations of nations, and of a new and better order of things laid, with roving eyes, and an attention preoccupied with trifles.

The two omnipresent parties of History, the party of the Past and the party of the Future, divide society to-day as of old. Here is the innumerable multitude of those who accept the state and the church from the last generation, and stand on no argument but possession. They have reason also, and, as I think, better reason than is commonly stated. No Burke, no Metternich has yet done full justice to the side of conservatism. But this class, however large, relying not on the intellect but on the instinct, blends itself with the brute forces of nature, is respectable only as nature is, but the individuals have no attraction for us. It is the dissenter, the theorist, the aspirant, who is quitting this ancient domain to embark on seas of adventure, who engages our interest. Omitting then for the present all notice of the stationary class, we shall find that the movement party divides itself into two classes, the actors, and the students.

The actors constitute that great army of martyrs who, at least in America, by their conscience and philanthropy, occupy the ground which Calvinism occupied in the last age, and compose the visible church of the existing generation. The present age will be marked by its harvest of projects for the reform of domestic, civil, literary, and ecclesiastical institutions. The leaders of the crusades against War, Negro slavery, Intemperance, Government based on force, Usages of trade, Court and Custom-house Oaths, and so on to the agitators on the system of Education and the laws of Property, are the right successors of Luther, Knox, Robinson, Fox, Penn, Wesley, and Whitfield. They have the same virtues and vices; the same noble impulse, and the same bigotry. These movements are on all accounts important; they not only check the special abuses, but they educate the conscience and the intellect of the people. How can such a question as the Slave trade be agitated for forty years by all the Christian nations, without throwing great light on ethics into the general mind? The fury with which the slave-trader defends every inch of his bloody deck, and his howling auction-platform, is a trumpet to alarm the ear of mankind, to wake the dull, and drive all neutrals to take sides, and to listen to the argument and the verdict. The Temperance-question, which rides the conversa-

much noticed at first, every day appears more flagrant mischief to the American constitution. But now the purists are looking into all these matters. The more intelligent are growing uneasy on the subject of Marriage. They wish to see the character represented also in that covenant. There shall be nothing brutal in it, but it shall honour the man and the woman, as much as the most diffusive and universal action. Grimly the same spirit looks into the law of Property, and accuses men of driving a trade in the great boundless providence which had given the air, the water, and the land to men, to use and not to fence in and monopolize. It casts its eye on Trade, and Day Labour, and so it goes up and down, paving the earth with eyes, destroying privacy and making thorough-lights. Is all this for nothing? Do you suppose that the reformers, which are preparing, will be as superficial as those we know?

By the books it reads and translates, judge what books it will presently print. A great deal of the profoundest thinking of antiquity, which had become as good as obsolete for us, is now re-appearing in extracts and allusions, and in twenty years will get all printed anew. See how daring is the reading, the speculation, the experimenting of the time. If now some genius shall arise who could unite these scattered rays! And always such a genius does embody the ideas of each time. Here is great variety and richness of mysticism, each part of which now only disgusts, whilst it forms the sole thought of some poor Perfectionist or "Comer out," yet, when it shall be taken up as the garniture of some profound and all-reconciling thinker, will appear the rich and appropriate decoration of his robes.

These reforms are our contemporaries; they are ourselves our own light, and sight, and conscience; they only name the relation which subsists between us and the vicious institutions which they go to rectify. They are the simplest statements of man in these matters; the plain right and wrong. I cannot choose but allow and honour them. The impulse is good, and the theory; the practice is less beautiful. The Reformers affirm the inward life, but they do not trust it, but use outward and vulgar means. They do not rely on precisely that strength which wins me to their cause; not on love, not on a principle, but on men, on multitudes, on circumstances, on money, on party; that is, on fear, on wrath, and pride. The love which lifted men to the sight of these better ends, was the true and best distinction of this time, the disposition to trust a principle more than a material force. I think that the soul of reform; the conviction, that not sensualism, not slavery, not war, not imprisonment, not even government, are needed, —but in lieu of 'hem all, reliance on the sentiment of man,

which will work best the more it is trusted; not reliance on numbers, but, contrariwise, distrust of numbers, and the feeling that then are we strongest, when most private and alone. The young men, who have been vexing society for these last years with regenerative methods, seem to have made this mistake; they all exaggerated some special means, and all failed to see that the Reform of Reforms must be accomplished without means.

The Reforms have their high origin in an ideal justice, but they do not retain the purity of an idea. They are quickly organized in some low, inadequate form, and present no more poetic image to the mind, than the evil tradition which they reprobated. They mix the fire of the moral sentiment with personal and party heats, with measureless exaggerations, and the blindness that prefers some darling measure to justice and truth. Those, who are urging with most ardour what are called the greatest benefits of mankind, are narrow, self-pleasing, conceited men, and affect us as the insane do. They bite us, and we run mad also. I think the work of the reformer as innocent as other work that is done around him; but when I have seen it near, I do not like it better. It is done in the same way, it is done profanely, not piously; by management, by tactics, and clamour. It is a buzz in the ear. I cannot feel any pleasure in sacrifices which display to me such partiality of character. We do not want actions, but men; not a chemical drop of water, but rain; the spirit that sheds and showers actions, countless, endless actions. You have on some occasion played a bold part. You have set your heart and face against society, when you thought it wrong, and returned it frown for frown. Excellent: now can you afford to forget it, reckoning all your action no more than the passing of your hand through the air, or a little breath of your mouth? The world leaves no track in space, and the greatest action of man no mark in the vast idea. To the youth diffident of his ability, and full of compunction at his unprofitable existence, the temptation is always great to lend himself to public movements, and as one of a party accomplish what he cannot hope to effect alone. But he must resist the degradation of a man to a measure. I must act with truth, though I should never come to act, as you call it, with effect. I must consent to inaction. A patience which is grand; a brave and cold neglect of the offices which prudence exacts, so it be done in a deep upper piety; a consent to solitude and inaction, which proceeds out of an unwillingness to violate character, is the century which makes the gem. Whilst therefore I desire to express the respect and joy I feel before this sublime connection of reforms, now in their infancy around us, I urge the more

earnestly the paramount duties of self-reliance. I cannot find language of sufficient energy to convey my sense of the sacredness of private integrity. All men, all things, the state, the church, yea, the friends of the heart, are phantasms and unreal beside the sanctuary of the heart. With so much awe, with so much fear, let it be respected.

The great majority of men, unable to judge of any principle until its light falls on a fact, are not aware of the evil that is around them, until they see it in some gross form, as in a class of intemperate men, or slaveholders, or soldiers, or fraudulent persons. Then they are greatly moved; and magnifying the importance of that wrong, they fancy that if that abuse were redressed, all would go well, and they fill the land with clamour to correct it. Hence the missionary and other religious efforts. If every island and every house had a Bible, if every child was brought into the Sunday School, would the wounds of the world heal, and man be upright?

But the man of ideas, accounting the circumstance nothing, judges of the commonwealth from the state of his own mind. 'If,' he says, 'I am selfish, then is there slavery, or the effort to establish it, wherever I go. But if I am just, then is there no slavery, let the laws say what they will. For if I treat all men as gods, how to me can there be any such thing as a slave?' But how frivolous is your war against circumstances. This denouncing philanthropist is himself a slaveholder in every word and look. Does he free me? Does he cheer me? He is the state of Georgia, or Alabama, with their sanguinary slave-laws, walking here on our north-eastern shores. We are all thankful he has no more political power, as we are fond of liberty ourselves. I am afraid our virtue is a little geographical. I am not mortified by our vice; that is obduracy; it colours and palters, it curses and swears, and I can see to the end of it; but, I own, our virtue makes me ashamed; so sour and narrow, so thin and blind, virtue so vice-like. Then again, how trivial seem the contests of the abolitionist, whilst he aims merely at the circumstance of the slave. Give the slave the least elevation of religious sentiment, and he is no slave: you are the slave: he not only in his humility feels his superiority, feels that much deplored condition of his to be a fading trifle, but he makes you feel it too. He is the master. The exaggeration, which our young people make of his wrongs, characterizes themselves. What are no trifles to them, they naturally think are no trifles to Pompey.

We say, then, that the reforming movement is sacred in its origin; in its management and details timid and profane. These benefactors hope to raise man by improving his circumstances: by combination of that which is dead, they hope to

make something alive. In vain. By new infusions alone of the spirit by which he is made and directed, can he be re-made and reinforced. The sad Pestalozzi, who shared with all ardent spirits the hope of Europe on the outbreak of the French Revolution, after witnessing its sequel, recorded his conviction, that "the amelioration of outward circumstances will be the effect, but can never be the means of mental and moral improvement." Quitting now the class of actors, let us turn to see how it stands with the other class of which we spoke, namely, the students.

A new disease has fallen on the life of man. Every Age, like every human body, has its own distemper. Other times have had war, or famine, or a barbarism domestic or bordering, as their antagonism. Our forefathers walked in the world and went to their graves, tormented with the fear of Sin, and the terror of the Day of Judgment. These terrors have lost their force, and our torment is Unbelief, the Uncertainty as to what we ought to do; the distrust of the value of what we do, and the distrust that the Necessity (which we all at last believe in) is fair and beneficent. Our Religion assumes the negative form of rejection. Out of love of the true, we repudiate the false: and the Religion is an abolishing criticism. A great perplexity hangs like a cloud on the brow of all cultivated persons, a certain imbecility in the best spirits, which distinguishes the period. We do not find the same trait in the Arabian, in the Hebrew, in Greek, Roman, Norman, English periods; no, but in other men a natural firmness. The men did not see beyond the need of the hour. They planted their foot strong, and doubted nothing. We mistrust every step we take. We find it the worst thing about time, that we know not what to do with it. We are so sharp-sighted that we can neither work nor think, neither read Plato nor not read him.

Then there is what is called a too intellectual tendency. Can there be too much intellect? We have never met with any such excess. But the criticism, which is levelled at the laws and manners, ends in thought, without causing a new method of life. The genius of the day does not incline to a deed, but to a beholding. It is not that men do not wish to act; they pine to be employed, but are paralyzed by the uncertainty what they should do. The inadequacy of the work to the faculties, is the painful perception which keeps them still. This happens to the best. Then, talents bring their usual temptations, and the current literature and poetry with perverse ingenuity draw us away from life to solitude and meditation. This could well be borne, if it were great and involuntary; if the men were ravished by their thought, and hurried into ascetic extravagances. Society could then manage to release their shoulder

from its wheel, and grant them for a time this privilege of sabbath. But they are not so. Thinking, which was a rage, is become an art. The thinker gives me results, and never invites me to be present with him at his invocation of truth, and to enjoy with him its proceeding into his mind.

So little action amidst such audacious and yet sincere profession, that we begin to doubt if that great revolution in the art of war, which has made it a game of posts instead of a game of battles, has not operated on Reform; whether this be not also a war of posts, a paper blockade, in which each party is to display the utmost resources of his spirit and belief, and no conflict occur; but the world shall take that course which the demonstration of the truth shall indicate.

But we must pay for being too intellectual, as they call it. People are not as light-hearted for it. I think men never loved life less. I question if care and doubt ever wrote their names so legibly on the faces of any population. This *Ennui*, for which we Saxons had no name, this word of France has got a terrific significance. It shortens life, and bereaves the day of its light. Old age begins in the nursery, and before the young American is put into jacket and trousers, he says, 'I want something which I never saw before;' and 'I wish I was not I.' I have seen the same gloom on the brow even of those adventurers from the intellectual class, who had dived deepest and with most success into active life. I have seen the authentic sign of anxiety and perplexity on the greatest forehead of the state. The canker-worms have crawled to the topmost bough of the wild elm, and swing down from that. Is there less oxygen in the atmosphere? What has checked in this age the animal spirits which gave to our forefathers their bounding pulse?

But have a little patience with this melancholy humour. Their unbelief arises out of a greater Belief; their inaction out of a scorn of inadequate action. By the side of these men the hot agitators have a certain cheap and ridiculous air; they even look smaller than the others. Of the two, I own, I like the speculators best. They have some piety which looks with faith to a fair Future, unprofaned by rash and unequal attempts to realize it. And truly we shall find much to console us, when we consider the cause of their uneasiness. It is the love of greatness, it is the need of harmony, the contrast of the dwarfish Actual with the exorbitant Idea. No man can compare the ideas and aspirations of the innovators of the present day, with those of former periods, without feeling how great and high this criticism is. The revolutions that impend over society are not now from ambition and rapacity, from impatience of one or another form of government, but from new

modes of thinking, which shall recompose society after a new order, which shall animate labour by love and science, which shall destroy the value of many kinds of property, and replace all property within the dominion of reason and equity. There was never so great a thought labouring in the breasts of men as now. It almost seems as if what was aforesaid spoken fabulously and hieroglyphically, was now spoken plainly, the doctrine, namely, of the indwelling of the Creator in man. The spiritualist wishes this only, that the spiritual principle should be suffered to demonstrate itself to the end, in all possible applications to the state of man, without the admission of anything unspiritual, that is, anything positive, dogmatic, or personal. The excellence of this class consists in this, that they have believed; that, affirming the need of new and higher modes of living and action, they have abstained from the recommendation of low methods. Their fault is that they have stopped at the intellectual perception; that their will is not yet inspired from the Fountain of Love. But whose fault is this? and what a fault, and to what inquiry does it lead? We have come to that which is the spring of all power, of beauty and virtue, of art and poetry; and who shall tell us according to what law its inspirations and its informations are given or withheld?

I do not wish to be guilty of the narrowness and pedantry of inferring the tendency and genius of the Age from a few and insufficient facts or persons. Every age has a thousand sides and signs and tendencies; and it is only when surveyed from inferior points of view, that great varieties of character appear. Our time too is full of activity and performance. Is there not something comprehensive in the grasp of a society which to great mechanical invention, and the best institutions of property, adds the most daring theories; which explores the subtlest and most universal problems? At the manifest risk of repeating what every other Age has thought of itself, we might say, we think the Genius of this Age more philosophical than any other has been, righter in its aims, truer, with less fear, less fable, less mixture of any sort.

But turn it how we will, as we ponder this meaning of the times, every new thought drives us to the deep fact, that the Time is the child of the Eternity. The main interest which any aspects of the Times can have for us, is the great spirit which gazes through them, the light which they can shed on the wonderful questions, What we are? and Whither we tend? We do not wish to be deceived. Here we drift, like white sail across the wild ocean, now bright on the wave, now darkling in the trough of the sea;—but from what port did we sail? Who knows? Or to what port are we bound? Who knows?

There is no one to tell us but such poor weather-tossed mariners as ourselves, whom we speak as we pass, or who have hoisted some signal, or floated to us some letter in a bottle from far. But what know they more than we? They also found themselves on this wondrous sea. No; from the older sailors, nothing. Over all their speaking-trumpets, the gray sea and the loud winds answer, Not in us; not in Time. Where then but in Ourselves, where but in that Thought through which we communicate with absolute nature, and are made aware that, whilst we shed the dust of which we are built, grain by grain, till it is all gone, the law which clothes us with humanity remains anew? where, but in the intuitions which are vouchsafed us from within, shall we learn the Truth? Faithless, faithless, we fancy that with the dust we depart and are not; and do not know that the law and the perception of the law are at last one; that only as much as the law enters us, becomes us, we are living men—immortal with the immortality of this law. Underneath all these appearances lies that which is, that which lives, that which causes. This ever-renewing generation of appearances rests on a reality, and a reality that is alive.

To a true scholar the attraction of the aspects of nature, the departments of life, and the passages of his experience, is simply the information they yield him of this supreme nature which lurks within all. That reality, that causing force is moral. The Moral Sentiment is but its other name. It makes by its presence or absence right and wrong, beauty and ugliness, genius or depravation. As the granite comes to the surface and towers into the highest mountains, and, if we dig down, we find it below the superficial strata, so in all the details of our domestic or civil life, is hidden the elemental reality, which ever and anon comes to the surface, and forms the grand men, who are the leaders and examples, rather than the companions of the race. The granite is curiously concealed under a thousand formations and surfaces, under fertile soils, and grasses, and flowers, under well-manured, arable fields, and large towns and cities, but it makes the foundation of these, and is always indicating its presence by slight but sure signs. So is it with the Life of our life: so close does that also hide. I read it in glad and in weeping eyes: I read it in the pride and in the humility of people: it is recognized in every bargain and in every complaisance, in every criticism, and in all praise: it is voted for at elections; it wins the cause with juries; it rides the stormy eloquence of the senate, sole victor; histories are written of it, holidays decreed to it; statues, tombs, churches, built to its honour; yet men seem to fear and to shun it, when it comes barely to view in our immediate neighbourhood.

For that reality let us stand: that let us serve: and for that speak. Only as far as *that* shines through them, are these times or any times worth consideration. I wish to speak of the politics, education, business, and religion around us, without ceremony or false deference. You will absolve me from the charge of flippancy, or malignity, or the desire to say smart things at the expense of whomsoever, when you see that reality is all we prize, and that we are bound on our entrance into nature to speak for that. Let it not be recorded in our own memories, that in this moment of the Eternity, when we who were named by our names, flitted across the light, we were afraid of any fact, or disgraced the fair Day by a pusillanimous preference of our bread to our freedom. What is the scholar, what is the man *for*, but for hospitality to every new thought of his time? Have you leisure, power, property, friends? you shall be the asylum and patron of every new thought, every unproven opinion, every untried project, which proceeds out of good will and honest seeking. All the newspapers, all the tongues of to-day will of course at first defame what is noble; but you who hold not of to-day, not of the times, but of the Everlasting, are to stand for it: and the highest compliment man ever receives from heaven, is the sending to him its disguised and discredited angels.

temper governs them; that for me, it avails not to trust in principles; they will fail me; I must bend a little; it distrusts nature; it thinks there is a general law without a particular application—law for all that does not include any one. Reform in its antagonism inclines to asinine resistance, to kick with hoofs; it runs to egotism and bloated self-conceit; it runs to a bodiless pretension, to unnatural refining and elevation, which ends in hypocrisy and sensual reaction.

And so whilst we do not go beyond general statements, it may be safely affirmed of these two metaphysical antagonists, that each is a good half, but an impossible whole. Each exposes the abuses of the other, but in a true society, in a true man, both must combine. Nature does not give the crown of its approbation, namely, beauty, to any action or emblem or actor, but to one which combines both these elements; not to the rock which resists the waves from age to age, nor to the wave which lashes incessantly the rock, but the superior beauty is with the oak which stands with its hundred arms against the storms of a century, and grows every year like a sapling; or the river which ever flowing, yet is found in the same bed from age to age; or, greatest of all, the man who has subsisted for years amid the changes of nature, yet has distanced himself, so that when you remember what he was, and see what he is, you say, what strides! what a disparity is here!

Throughout nature the past combines in every creature with the present. Each of the convolutions of the sea-shell, each node and spine marks one year of the fish's life, what was the mouth of the shell for one season, with the addition of new matter by the growth of the animal, becoming an ornamental node. The leaves and a shell of soft wood are all that the vegetation of this summer has made, but the solid columnar stem, which lifts that bank of foliage into the air to draw the eye and to cool us with its shade, is the gift and legacy of dead and buried years.

In nature, each of these elements being always present, each theory has a natural support. As we take our stand on Necessity, or on Ethics, shall we go for the conservative, or for the reformer. If we read the world historically, we shall say, Of all the ages, the present hour and circumstance is the cumulative result; this is the best throw of the dice of nature that has yet been, or that is yet possible. If we see it from the side of Will, or the Moral Sentiment, we shall accuse the Past and the Present, and require the impossible of the Future.

But although this bifold fact lies thus united 'n real nature, and so united that no man can continue to exist in whom both

these elements do not work, yet men are not philosophers, but are rather very foolish children, who, by reason of their partiality, see everything in the most absurd manner, and are the victims at all times of the nearest object. There is even no philosopher who is a philosopher at all times. Our experience, our perception is conditioned by the need to acquire in parts and in succession, that is, with every truth a certain falsehood. As this is the invariable method of our training, we must give it allowance, and suffer men to learn as they have done for six millenniums, a word at a time, to pair off into insane parties, and learn the amount of truth each knows, by the denial of an equal amount of truth. For the present, then, to come at what sum is attainable to us, we must even hear the parties plead as parties.

That which is best about conservatism, that which, though it cannot be expressed in detail, inspires reverence in all, is the inevitable. There is the question not only, what the conservative says for himself? but, why must he say it? What insurmountable fact binds him to that side? Here is the fact which men call Fate, and fate in dread degrees, fate behind fate, not to be disposed of by the consideration that the Conscience commands this or that, but necessitating the question, whether the faculties of man will play him true in resisting the facts of universal experience? For although the commands of the Conscience are *essentially* absolute, they are *historically* liminary. Wisdom does not seek a literal rectitude, but an useful, that is, a conditioned one, such a one as the faculties of man and the constitution of things will warrant. The reformer, the partisan, loses himself in driving to the utmost some specialty of right conduct, until his own nature and all nature resist him; but Wisdom attempts nothing enormous and disproportioned to its powers, nothing which it cannot perform or nearly perform. We have all a certain intellection or presentiment of reform existing in the mind, which does not yet descend into the character, and those who throw themselves blindly on this lose themselves. Whatever they attempt in that direction, fails, and reacts suicidally on the actor himself. This is the penalty of having transcended nature. For the existing world is not a dream, and cannot with impunity be treated as a dream; neither is it a disease; but it is the ground on which you stand, it is the mother of whom you were born. Reform converses with possibilities, perchance with impossibilities; but here is sacred fact. This also was true, or it could not be: it had life in it, or it could not have existed; it has life in it, or it could not continue. Your schemes may be feasible, or may not be, but this has the endorsement of nature and a long friendship and cohabitation

with the powers of nature. This will stand until a better cast of the dice is made. The contest between the Future and the Past is one between Divinity entering, and Divinity departing. You are welcome to try your experiments, and, if you can, to displace the actual order by that ideal republic you announce, for nothing but God will expel God. But plainly the burden of proof must lie with the projector. We hold to this, until you can demonstrate something better.

The system of property and law goes back for its origin to barbarous and sacred times; it is the fruit of the same mysterious cause as the mineral or animal world. There is a natural sentiment and prepossession in favour of age, of ancestors, of barbarous and aboriginal usages, which is a homage to the element of necessity and divinity which is in them. The respect for the old names of places, of mountains, and streams, is universal. The Indian and barbarous name can never be supplanted without loss. The ancients tell us that the gods loved the Ethiopians for their stable customs; and the Egyptians and Chaldeans, whose origin could not be explored, passed among the junior tribes of Greece and Italy for sacred nations.

Moreover, so deep is the foundation of the existing social system, that it leaves no one out of it. We may be partial but Fate is not. All men have their root in it. You who quarrel with the arrangements of society, and are willing to embroil all, and risk the indisputable good that exists, for the chance of better, live, move, and have your being in this, and your deeds contradict your words every day. For as you cannot jump from the ground without using the resistance of the ground, nor put out the boat to sea, without shoving from the shore, nor attain liberty without rejecting obligation, so you are under the necessity of using the Actual order of things, in order to disuse it; to live by it, whilst you wish to take away its life. The past has baked your loaf, and in the strength of its bread you would break up the oven. But you are betrayed by your own nature. You also are conservatives. However men please to style themselves, I see no other than a conservative party. You are not only identical with us in your needs, but also in your methods and aims. You quarrel with my conservatism, but it is to build up one of your own; it will have a new beginning, but the same course and end, the same trials, the same passions; among the lovers of the new I observe that there is a jealousy of the newest, and that the seceder from the seceder is as damnable as the pope himself.

On these and the like grounds of general statement, conservatism plants itself without danger of being displaced. Especially before this *personal* appeal, the innovator must confess his weakness, must confess that no man is to be found good

enough to be entitled to stand champion for the principle. But when this great tendency comes to practical encounters, and is challenged by young men, to whom it is no abstraction, but a fact of hunger, distress, and exclusion from opportunities, it must needs seem injurious. The youth, of course, is an innovator by the fact of his birth. There he stands, newly born on the planet, a universal beggar, with all the reason of things, one would say, on his side. In his first consideration how to feed, clothe, and warm himself, he is met by warnings on every hand, that this thing and that thing have owners, and he must go elsewhere. Then he says; If I am born in the earth, where is my part? have the goodness, gentlemen of this world, to show me my wood-lot, where I may fell my wood, my field where to plant my corn, my pleasant ground where to build my cabin.

'Touch any wood, or field, or house-lot, on your peril,' cry all the gentlemen of this world; 'but you may come and work in ours, for us, and we will give you a piece of bread.'

And what is that peril?

Knives and muskets, if we meet you in the act; imprisonment, if we find you afterward.

And by what authority, kind gentlemen?

By our law.

And your law—is it just?

As just for you as it was for us. We wrought for others under this law, and got our lands so.

I repeat the question, Is your law just?

Not quite just, but necessary. Moreover, it is juster now than it was when we were born; we have made it milder and more equal.

I will none of your law, returns the youth; it encumbers me. I cannot understand, or so much as spare time to read that needless library of your laws. Nature has sufficiently provided me with rewards and sharp penalties, to bind me not to transgress. Like the Persian noble of old, I ask "that I may neither command or obey." I do not wish to enter into your complex social system. I shall serve those whom I can, and they who can will serve me. I shall seek those whom I love, and shun those whom I love not; and what more can all your laws render me?

With equal earnestness and good faith, replies to this plaintiff an upholder of the establishment, a man of many virtues:

Your opposition is feather-brained and over-fine. Young man, I have no skill to talk with you, but look at me; I have risen early and sat late, and toiled honestly and painfully for very many years. I never dreamed about methods; I laid my

bones to, and drudged for the good I possess; it was not got by fraud, nor by luck, but by work, and you must show me a warrant like these stubborn facts in your own fidelity and labour, before I suffer you, on the faith of a few fine words, to ride into my estate, and claim to scatter it as your own.

Now you touch the heart of the matter, replies the reformer. To that fidelity and labour, I pay homage. I am unworthy to arraign your manner of living, until I too have been tried. But I should be more unworthy, if I did not tell you why I cannot walk in your steps. I find this vast network, which you call property, extended over the whole planet. I cannot occupy the bleakest crag of the White Hills or the Alleghany Range, but some man or corporation steps up to me to show me that it is his. Now, though I am very peaceable, and on my private account could well enough die, since it appears there was some mistake in my creation, and that I have been *mis*sent to this earth, where all the seats were already taken—yet I feel called upon in behalf of rational nature, which I represent, to declare to you my opinion, that, if the Earth is yours, so also is it mine. All your aggregate existences are less to me a fact than is my own; as I am born to the earth, so the Earth is given to me, what I want of it to till and to plant; nor could I, without pusillanimity, omit to claim so much. I must not only have a name to live, I must live. My genius leads me to build a different manner of life from any of yours. I cannot then spare you the whole world. I love you better. I must tell you the truth practically; and take that which you call yours. It is God's world and mine; yours as much as you want, mine as much as I want. Besides, I know your ways; I know the symptoms of the disease. To the end of your power, you will serve this lie which cheats you. Your want is a gulf which the possession of the broad earth would not fill. Yonder sun in heaven you would pluck down from shining on the universe, and make him a property and privacy, if you could; and the moon and the north star you would quickly have occasion for in your closet and bed-chamber. What you do not want for use, you crave for ornament, and what your convenience could spare, your pride cannot.

On the other hand, precisely the defence which was set up for the British Constitution, namely, that with all its admitted defects, rotten boroughs and monopolies, it worked well, and substantial justice was somehow done; the wisdom and the worth did get into parliament, and every interest did by right, or might, or sleight, get represented;—the same defence is set up for the existing institutions.* They are not the best; they are not just; and in respect to you, personally, O brave young man! they cannot be justified. They nave, it is most

true, left you no acre for your own, and no law but our law, to the ordaining of which you were no party. But they do answer the end, they are really friendly to the good; unfriendly to the bad; they second the industrious, and the kind; they foster genius. They really have so much flexibility as to afford your talent and character, on the whole, the same chance of demonstration and success which they might have, if there was no law and no property.

It is trivial and merely superstitious to say that nothing is given you, no outfit, no exhibition; for in this institution of *credit*, which is as universal as honesty and promise in the human countenance, always some neighbour stands ready to be bread and land and tools and stock to the young adventurer. And if in any one respect they have come short, see what ample retribution of good they have made. They have lost no time and spared no expense to collect libraries, museums, galleries, colleges, palaces, hospitals, observatories, cities. The ages have not been idle, nor kings slack, nor the rich niggardly. Have we not atoned for this small offence (which we could not help) of leaving you no right in the soil, by this splendid indemnity of ancestral and national wealth? Would you have been born like a gipsy in a hedge, and preferred your freedom on a heath, and the range of a planet which had no shed or boscage to cover you from sun and wind,—to this towered and citted world? to this world of Rome, and Memphis, and Constantinople, and Vienna, and Paris, and London, and New York? For thee Naples, Florence, and Venice, for thee the fair Mediterranean, the sunny Adriatic; for thee both Indies smile; for thee the hospitable North opens its heated palaces under the polar circle; for thee roads have been cut in every direction across the land, and fleets of floating palaces with every security for strength, and provision for luxury, swim by sail and by steam through all the waters of this world. Every island for thee has a town; every town a hotel. Though thou wast born landless, yet to thy industry and thrift and small condescension to the established usage,—scores of servants are swarming in every strange place with cap and knee to thy command, scores, nay hundreds and thousands, for thy wardrobe, thy table, thy chamber, thy library, thy leisure: and every whim is anticipated and served by the best ability of the whole population of each country. The king on the throne governs for thee, and the judge judges; the barrister pleads; the farmer tills, the joiner hammers, the postman rides. Is it not exaggerating a trifle to insist on a formal acknowledgment of your claims, when these substantial advantages have been secured to you? Now can your children be educated, your labour turned to their advantage, and its fruits secured

to them after your death. It is frivolous to say, you have no acre, because you have not a mathematically measured piece of land. Providence takes care that you shall have a place, that you are waited for, and come accredited; and, as soon as you put your gift to use, you shall have acre or acre's worth according to your exhibition of desert,—acre, if you need land;—acre's worth, if you prefer to draw, or carve, or make shoes, or wheels, to the tilling of the soil.

Besides, it might temper your indignation at the supposed wrong which society has done you, to keep the question before you, how society got into this predicament? Who put things on this false basis? No single man, but all men. No man voluntarily and knowingly; but it is the result of that degree of culture there is in the planet. The order of things is as good as the character of the population permits. Consider it as the work of a great and beneficent and progressive necessity, which, from the first pulsation of the first animal life, up to the present high culture of the best nations, has advanced thus far. Thank the rude foster-mother though she has taught you a better wisdom than her own, and has set hopes in your heart which shall be history in the next ages. You are yourself the result of this manner of living, this foul compromise, this vituperated Sodom. It nourished you with care and love on its breast, as it had nourished many a lover of the right, and many a poet, and prophet, and teacher of men. Is it so irremediably bad? Then again, if the mitigations are considered, do not all the mischiefs virtually vanish? The form is bad, but see you not how every personal character reacts on the form, and makes it new? A strong person makes the law and custom null before his own will. Then the principle of love and truth reappears in the strictest courts of fashion and property. Under the richest robes, in the darlings of the selectest circles of European or American aristocracy, the strong heart will beat with love of mankind, with impatience of accidental distinctions, with the desire to achieve its own fate, and make every ornament it wears authentic and real.

Moreover, as we have already shown that there is no pure reformer, so it is to be considered that there is no pure conservative, no man who from the beginning to the end of his life maintains the defective institutions; but he who sets his face like a flint against every novelty, when approached in the confidence of conversation, in the presence of friendly and generous persons, has also his gracious and relenting motions, and espouses for the time the cause of man; and even if this be a short-lived emotion, yet the remembrance of it in private hours mitigates his selfishness and compliance with custom.

The Friar Bernard lamented in his cell on Mount Cenia the

crimes of mankind, and rising one morning before day from his bed of moss and dry leaves, he gnawed his roots and berries, drank of the spring, and set forth to go to Rome to reform the corruption of mankind. On his way he encountered many travellers who greeted him courteously; and the cabins of the peasants and the castles of the lords supplied his few wants. When he came at last to Rome, his piety and good will easily introduced him to many families of the rich, and on the first day he saw and talked with gentle mothers with their babes at their breasts, who told him how much love they bore their children, and how they were perplexed in their daily walk lest they should fail in their duty to them. 'What!' he said, 'and this on rich embroidered carpets, on marble floors, with cunning sculpture, and carved wood, and rich pictures, and piles of books about you?'—'Look at our pictures and books,' they said, 'and we will tell you, good Father, how we spent the last evening. These are stories of godly children and holy families and romantic sacrifices made in old or in recent times by great and not mean persons; and last evening, our family was collected, and our husbands and brothers discoursed sadly on what we could save and give in the hard times.' Then came in the men, and they said, 'What cheer, brother? Does thy convent want gifts?' Then the friar Bernard went home swiftly with other thoughts than he brought, saying, 'This way of life is wrong, yet these Romans, whom I prayed God to destroy, are lovers, they are lovers; what can I do?'

The reformer concedes that these mitigations exist, and that, if he proposed comfort, he should take sides with the establishment. Your words are excellent, but they do not tell the whole. Conservatism is affluent and openhanded, but there is a cunning juggle in riches. I observe that they take somewhat for everything they give. I look bigger, but am less; I have more clothes, but am not so warm; more armour, but less courage; more books, but less wit. What you say of your planted, builded, and decorated world, is true enough, and I gladly avail myself of its convenience; yet I have remarked that what holds in particular, holds in general, that the plant Man does not require for his most glorious flowering this pomp of preparation and convenience, but the thoughts of some beggarly Homer who strolled, God knows when, in the infancy and barbarism of the old world; the gravity and sense of some slave Moses who leads away his fellow slaves from their masters; the contemplation of some Scythian Anacharsis; the erect, formidable valour of some Dorian townsmen in the town of Sparta; the vigour of Clovis the Frank, and Alfred the Saxon, and Alaric the Goth, and Mahomet, Ali, and Omar the Arabians, Saladin the Kurd, and Othman the Turk, sufficed, to

build what you call society, on the spot and in the instant when the sound mind in a sound body appeared. Rich and fine is your dress, O conservatism! your horses are of the best blood; your roads are well cut and well paved; your pantry is full of meats and your cellar of wines, and a very good state and condition are you for gentlemen and ladies to live under; but every one of these goods steals away a drop of my blood. I want the necessity of supplying my own wants. All this costly culture of yours is not necessary. Greatness does not need it. Yonder peasant, who sits neglected there in a corner, carries a whole revolution of man and nature in his head which shall be a sacred history to some future ages. For man is the end of nature; nothing so easily organizes itself in every part of the universe as he; no moss, no lichen is so easily born; and he takes along with him and puts out from himself the whole apparatus of society and condition *extempore*, as an army encamps in a desert, and where all was just now blowing sand, creates a white city in an hour, a government, a market, a place for feasting, for conversation, and for love.

These considerations, urged by those whose characters and whose fortunes are yet to be formed, must needs command the sympathy of all reasonable persons. But beside that charity which should make all adult persons interested for the youth, and engage them to see that he has a free field and fair play on his entrance into life, we are bound to see that the society, of which we compose a part, does not permit the formation or continuance of views and practices injurious to the honour and welfare of mankind. The objection to conservatism, when embodied in a party, is, that in its love of acts, it hates principles; it lives in the senses, not in truth; it sacrifices to despair; it goes for availableness in its candidate, not for worth; and for expediency in its measures, and not for the right. Under pretence of allowing for friction, it makes so many additions and supplements to the machine of society, that it will play smoothly and softly, but will no longer grind any grist.

The conservative party in the universe concedes that the radical would talk sufficiently to the purpose, if we were still in the garden of Eden; he legislates for man as he ought to be; his theory is right, but he makes no allowance for friction; and this omission makes his whole doctrine false. The idealist retorts, that the conservative falls into a far more noxious error in the other extreme. The conservative assumes sickness as a necessity, and his social frame is a hospital, his total legislation is for the present distress, a universe in slippers and flannels, with bib and pap-spoon, swallowing pills and herb-tea. Sickness gets organized as well as health, the vice

generally, and now that leprosy has got such a foothold, leprosy has grown cunning, has got into the ballot-box; the lepers outvote the clean; society has resolved itself into a Hospital Committee, and all its laws are quarantine. If any man resist, and set up a foolish hope he has entertained as good against the general despair, society frowns on him, shuts him out of her opportunities, her granaries, her refectories, her water and bread, and will serve him a sexton's turn. Conservatism takes as low a view of every part of human action and passion. Its religion is just as bad; a lozenge for the sick; a dolorous tune to beguile the distemper; mitigations of pain by pillows and anodynes; always mitigations, never remedies; pardons for sin, funeral honours,—never self-help, renovation, and virtue. Its social and political action has no better aim; to keep out wind and weather, to bring the day and year about, and make the world last our day; not to sit on the world and steer it; not to sink the memory of the past in the glory of a new and more excellent creation; a timid cobbler and patcher, it degrades whatever it touches. The cause of education is urged in this country with the utmost earnestness,—on what ground? why on this, that the people have the power, and if they are not instructed to sympathize with the intelligent, reading, trading, and governing class, inspired with a taste for the same competitions and prizes, they will upset the fair pageant of Judicature, and perhaps lay a hand on the sacred muniments of wealth itself, and new distribute the land. Religion is taught in the same spirit. The contractors who were building a road out of Baltimore, some years ago, found the Irish labourers quarrelsome and refractory, to a degree that embarrassed the agents, and seriously interrupted the progress of the work. The corporation were advised to call off the police, and build a Catholic chapel; which they did; the priest presently restored order, and the work went on prosperously. Such hints, be sure, are too valuable to be lost. If you do not value the Sabbath, or other religious institutions, give yourself no concern about maintaining them. They have already acquired a market value as conservators of property; and if priest and church-member should fail, the chambers of commerce and the presidents of the Banks, the very innholders and landlords of the county would muster with fury to their support.

Of course, religion in such hands loses its essence. Instead of that reliance, which the soul suggests on the eternity of

truth and duty, men are misled into a reliance on institutions, which, the moment they cease to be the instantaneous creations of the devout sentiment, are worthless. Religion among the low becomes low. As it loses its truth, it loses credit with the sagacious. They detect the falsehood of the preaching, but when they say so, all good citizens cry, Hush; do not weaken the state, do not take off the strait jacket from dangerous persons. Every honest fellow must keep up the hoax the best he can; must patronize providence and piety, and wherever he sees anything that will keep men amused, schools or churches or poetry, or picture-galleries or music, or what not, he must cry "Hist-a-boy," and urge the game on. What a compliment we pay to the good SPIRIT with our superserviceable zeal!

But not to balance reasons for and against the establishment any longer, and if it still be asked in this necessity of partial organization, which party on the whole has the highest claims on our sympathy? I bring it home to the private heart, where all such questions must have their final arbitrament. How will every strong and generous mind choose its ground—with the defenders of the old? or with the seekers of the new? Which is that state which promises to edify a great, brave, and beneficent man; to throw him on his resources, and tax the strength of his character? On which part will each of us find himself in the hour of health and of aspiration?

I understand well the respect of mankind for war, because that breaks up the Chinese stagnation of society, and demonstrates the personal merits of all men. A state of war or anarchy, in which law has little force, is so far valuable, that it puts every man on trial. The man of principle is known as such, and even in the fury of faction is respected. In the civil wars of France, Montaigne alone, among all the French gentry, kept his castle gates unbarred, and made his personal integrity as good at least as a regiment. The man of courage and resources is shown, and the effeminate and base person. Those who rise above war, and those who fall below it, it easily discriminates, as well as those, who, accepting its rude conditions, keep their own head by their own sword.

But in peace and a commercial state we depend, not, as we ought, on our knowledge and all men's knowledge that we are honest men, but we cowardly lean on the virtue of others. For it is always at last the virtue of some men in the society, which keeps the law in any reverence and power. Is there not something shameful that I should owe my peaceful occupancy of my house and field, not to the knowledge of my countrymen that I am useful, but to their respect for sundry other repu-

It will never make any difference to a hero what the laws are. His greatness will shine and accomplish itself unto the end, whether they second him or not. If he have earned his bread by drudgery, and in the narrow and crooked ways which were all an evil law had left him, he will make it at least honourable by his expenditure. Of the past he will take no heed; for its wrongs he will not hold himself responsible: he will say, all the meanness of my progenitors shall not bereave me of the power to make this hour and company fair and fortunate. Whatsoever streams of power and commodity flow to me, shall of me acquire healing virtue, and become fountains of safety. Cannot I too descend a Redeemer into nature? Whosoever hereafter shall name my name, shall not record a malefactor, but a benefactor in the earth. If there be power in good intention, in fidelity, and in toil, the north wind shall be purer, the stars in heaven shall glow with a kindlier beam, that I have lived. I am primarily engaged to myself to be a public servant of all the gods, to demonstrate to all men that there is intelligence and good will at the heart of things, and ever higher and yet higher leadings. These are my engagements; how can your law further or hinder me in what I shall do to men? On the other hand, these dispositions establish their relations to me. Wherever there is worth, I shall be greeted. Wherever there are men, are the objects of my study and love. Sooner or later all men will be my friends, and will testify in all methods the energy of their regard. I cannot thank your law for my protection. I protect it. It is not in its power to protect me. It is my business to make myself revered. I depend on my honour, my labour, and my dispositions, for my place in the affections of mankind, and not on any conventions or parchments of yours.

But if I allow myself in derelictions, and become idle and dissolute, I quickly come to love the protection of a strong law, because I feel no title in myself to my advantages. To the intemperate and covetous person no love flows; to him mankind would pay no rent, no dividend, if force were once relaxed; nay, if they could give their verdict, they would say, that his self-indulgence and his oppression deserved punishment from society, and not that rich board and lodging he now enjoys. The law acts then as a screen of his unworthiness, and makes him worse the longer it protects him.

In conclusion, to return from this alternation of partial views, to the high platform of universal and necessary history, it is a happiness for mankind that innovation has got on so far, and

has so free a field before it. The boldness of the hope men entertain transcends all former experience. It calms and cheers them with the picture of a simple and equal life of truth and piety. And this hope flowered on what tree? It was not imported from the stock of some celestial plant, but grew here on the wild crab of conservatism. It is much that this old and vituperated system of things has borne so fair a child. It predicts that amidst a planet peopled with conservatives, one Reformer may yet be born.

THE TRANSCENDENTALIST.

A LECTURE READ IN THE MASONIC TEMPLE, BOSTON, JANUARY, 1842.

THE first thing we have to say respecting what are called *new views* here in New England, at the present time, is, that they are not new, but the very oldest of thoughts cast into the mould of these new times. The light is always identical in its composition, but it falls on a great variety of objects, and by so falling is first revealed to us, not in its own form, for it is formless, but in theirs; in like manner, thought only appears in the objects it classifies. What is popularly called Transcendentalism among us, is Idealism; Idealism as it appears in 1842. As thinkers, mankind have ever divided into two sects, Materialists and Idealists; the first class founding on experience, the second on consciousness; the first class beginning to think from the data of the senses, the second class perceive that the senses are not final, and say, the senses give us representations of things, but what are the things themselves, they cannot tell. The materialist insists on facts, on history, on the force of circumstances, and the animal wants of man; the idealist on the power of Thought and of Will, on inspiration, on miracle, on individual culture. These two modes of thinking are both natural, but the idealist contends that his way of thinking is in higher nature. He concedes all that the other affirms, admits the impressions of sense, admits their coherency, their use and beauty, and then asks the materialist for his grounds of assurance that things are as his senses represent them. But I, he says, affirm facts not affected by the allusions of sense, facts which are of the same nature as the faculty which reports them, and not liable to doubt; facts which in their first appearance to us assume a native superiority to material facts, degrading these into a language by which the first are to be spoken; facts which it only needs a retirement from the senses to discern. Every materialist will be an idealist; but an idealist can never go backward to be a materialist.

The idealist, in speaking of events, sees them as spirits. He does not deny the sensuous fact: by no means; but he will not see that alone. He does not deny the presence of this table, this chair, and the walls of this room, but he looks at these things as the reverse side of the tapestry, as the *other end*, each being a sequel or completion of a spiritual fact which nearly concerns him. This manner of looking at things, transfers every object in nature from an independent and anomalous position without there, into the consciousness. Even the

materialist Condillac, perhaps the most logical expounder of materialism, was constrained to say, "Though we should soar into the heavens, though we should sink into the abyss, we never go out of ourselves; it is always our own thought that we perceive." What more could an idealist say?

The materialist, secure in the certainty of sensation, mocks at fine-spun theories, at star-gazers and dreamers, and believes that his life is solid, that he at least takes nothing for granted, but knows where he stands, and what he does. Yet how easy it is to show him, that he also is a phantom walking and working amid phantoms, and that he need only ask a question or two beyond his daily questions, to find his solid universe growing dim and impalpable before his sense. The sturdy capitalist, no matter how deep and square on blocks of Quincy granite he lays the foundations of his banking-house, or Exchange, must set it, at last, not on a cube corresponding to the angles of his structure, but on a mass of unknown materials and solidity, red-hot or white-hot, perhaps at the core, which rounds off to an almost perfect sphericity, and lies floating in soft air, and goes spinning away, dragging bank and banker with it at a rate of thousands of miles the hour; he knows not whither—a bit of bullet, now glimmering, now darkling through a small cubic space on the edge of an unimaginable pit of emptiness. And this wild balloon, in which his whole venture is embarked, is a just symbol of his whole state and faculty. One thing, at least, he says is certain, and does not give me the headache, that figures do not lie; the multiplication table has been hitherto found unimpeachable truth; and, moreover, if I put a gold eagle in my safe, I find it again tomorrow;—but for these thoughts, I know not whence they are. They change and pass away. But ask him why he believes that an uniform experience will continue uniform, or on what grounds he founds his faith in his figures, and he will perceive that his mental fabric is built up on just as strange and quaking foundations as his proud edifice of stone.

In the order of thought, the materialist takes his departure from the external world, and esteems a man as one product of that. The idealist takes his departure from his consciousness, and reckons the world an appearance. The materialist respects sensible masses, Society, Government, social art, and luxury, every establishment, every mass, whether majority of numbers, or extent of space, or amount of objects, every social action. The idealist has another measure, which is metaphysical, namely, the *rank* which things themselves take in his consciousness; not at all, the size or appearance, Mind is the only reality, of which men and all other natures are better or worse reflectors. Nature, literature, history, are only subjective

phenomena. Although in his action overpowered by the laws of action, and so, warmly co-operating with men, even preferring them to himself, yet when he speaks scientifically, or after the order of thought, he is constrained to degrade persons into representatives of truths. He does not respect labour, or the products of labour, namely, property, otherwise than as a manifold symbol, illustrating with wonderful fidelity of details the laws of being; he does not respect government, except as far as it reiterates the law of his mind; nor the church; nor charities; nor arts, for themselves; but hears, as at a vast distance, what they say, as if his consciousness would speak to him through a pantomimic scene. His thought—that is the Universe. His experience inclines him to behold the procession of facts you call the world, as flowing perpetually outward from an invisible, unsounded centre in himself, centre alike of him and of them, and necessitating him to regard all things as having a subjective or relative existence, relative to that aforesaid Unknown Centre of him.

From this transfer of the world into the consciousness, this beholding of all things in the mind, follow easily his whole ethics. It is simpler to be self-dependent. The height, the deity of man is, to be self-sustained, to need no gift, no foreign force. Society is good when it does not violate me; but best when it is likest to solitude. Everything real is self-existent. Everything divine shares the self-existence of Deity. All that you call the world is the shadow of that substance which you are, the perpetual creation of the powers of thought, of those that are dependent and of those that are independent of your will. Do not cumber yourself with fruitless pains to mend and remedy remote effects; let the soul be erect, and all things will go well. You think me the child of my circumstances: I make my circumstance. Let any thought or motive of mine be different from that they are, the difference will transform my condition and economy. I—this thought which is called I—is the mould into which the world is poured like melted wax. The mould is invisible, but the world betrays the shape of the mould. You call it the power of circumstance, but it is the power of me. Am I in harmony with myself? my position will seem to you just and commanding. Am I vicious and insane? my fortunes will seem to you obscure and descending. As I am, so shall I associate, and, so shall I act; Cæsar's history will paint out Cæsar. Jesus acted so, because he thought so. I do not wish to overlook or to gainsay any reality; I say, I make my circumstance: but if you ask me, Whence am I? I feel like other men my relation to that Fact which cannot be spoken, or defined, nor even thought, but which exists, and will exist.

The Transcendentalist adopts the whole connection of spiritual doctrine. He believes in miracle, in the perpetual openness of the human mind to new influx of light and power; he believes in inspiration, and in ecstasy. He wishes that the spiritual principle should be suffered to demonstrate itself to the end, in all possible applications to the state of man, without the admission of anything unspiritual; that is, anything positive, dogmatic, personal. Thus, the spiritual measure of inspiration is the depth of the thought, and never, who said it? And so he resists all attempts to palm other rules and measures on the spirit than its own.

In action, he easily incurs the charge of antinomianism by his avowal that he, who has the Lawgiver, may with safety not only neglect, but even contravene every written commandment. In the play of Othello, the expiring Desdemona absolves her husband of the murder, to her attendant Emilia. Afterwards, when Emilia charges him with the crime, Othello exclaims,

"You heard her say herself it was not I."

Emilia replies,

"The more angel she, and thou the blacker devil."

Of this fine incident, Jacobi, the Transcendental moralist, makes use, with other parallel instances, in his reply to Fichte. Jacobi, refusing all measure of right and wrong except the determinations of the private spirit, remarks that there is no crime but has sometimes been a virtue. "I," he says, "am that atheist, that godless person who, in opposition to an imaginary doctrine of calculation, would lie as the dying Desdemona lied; would lie and deceive, as Pylades when he personated Orestes; would assassinate like Timoleon; would perjure myself like Epaminondas, and John de Witt; I would resolve on suicide like Cato; I would commit sacrilege with David; yea, and pluck ears of corn on the Sabbath, for no other reason than that I was fainting for lack of food. For, I have assurance in myself, that, in pardoning these faults according to the letter, man exerts the sovereign right which the majesty of his being confers on him: he sets the seal of his divine nature to the grace he accords."*

In like manner, if there is anything grand and daring in human thought or virtue, any reliance on the vast, the unknown; any presentiment; any extravagance of faith, the spiritualist adopts it as most in nature. The oriental mind has always tended to this largeness. Buddhism is an expression of it. The Buddhist who thanks no man, who says, "do not flatter your benefactors," but who, in his conviction that every

* Coleridge's Translation.

good deed can by no possibility escape its reward, will not deceive the benefactor by pretending that he has done more than he should, is a Transcendentalist.

You will see by this sketch that there is no such thing as a Transcendental *party*; that there is no pure Transcendentalist; that we know of none but prophets and heralds of such a philosophy; that all who by strong bias of nature have leaned to the spiritual side in doctrine, have stopped short of their goal. We have had many harbingers and forerunners; but of a purely spiritual life, history has afforded no example. I mean, we have yet no man who has leaned entirely on his character, and eaten angels' food; who, trusting to his sentiments, found life made of miracles; who, working for universal aims, found himself fed, he knew not how; clothed, sheltered, and weaponed, he knew not how, and yet it was done by his own hands. Only in the instinct of the lower animals, we find the suggestion of the methods of it, and something higher than our understanding. The squirrel hoards nuts, and the bee gathers honey, without knowing what they do, and they are thus provided for without selfishness or disgrace.

Shall we say, then, that Transcendentalism is the Saturnalia or excess of Faith; the presentiment of a faith proper to man in his integrity, excessive only when his imperfect obedience hinders the satisfaction of his wish. Nature is transcendental, exists primarily, necessarily, ever works and advances, yet takes no thought for to-morrow. Man owns the dignity of the life which throbs around him in chemistry, and tree, and animal, and in the involuntary functions of his own body; yet he is balked when he tries to fling himself into this enchanted circle, where all is done without degradation. Yet genius and virtue predict in man the same absence of private ends, and of condescension to circumstances, united with every trait and talent of beauty and power.

This way of thinking, falling on Roman times, made Stoic philosophers; falling on despotic times, made patriot Catos and Brutuses; falling on superstitious times, made prophets and apostles; on popish times, made protestants and ascetic monks, preachers of Faith against the preachers of Works; on prelatical times, made Puritans and Quakers; and falling on Unitarian and commercial times, makes the peculiar shades of Idealism which we know.

It is well known to most of my audience, that the Idealism of the present day acquired the name of Transcendental, from the use of that term by Immanuel Kant, of Konigsberg, who replied to the sceptical philosophy of Locke, which insisted that there was nothing in the intellect which was not previously in the experience of the senses, by showing that there

was a very important class of ideas, or imperative forms, which did not come by experience, but through which experience was acquired; that these were intuitions of the mind itself; and he denominated them *Transcendental* forms. The extraordinary profoundness and precision of that man's thinking have given vogue to his nomenclature, in Europe and America, to that extent, that whatever belongs to the class of intuitive thought, is popularly called at the present day *Transcendental*.

Although, as we have said, there is no pure Transcendentalist, yet the tendency to respect the intuitions, and to give them, at least in our creed, all authority over our experience, has deeply coloured the conversation and poetry of the present day: and the history of genius and of religion in these times, though impure, and as yet not incarnated in any powerful individual, will be the history of this tendency.

It is a sign of our times, conspicuous to the coarsest observer, that many intelligent and religious persons withdraw themselves from the common labours and competitions of the market and the caucus, and betake themselves to a certain solitary and critical way of living, from which no solid fruit has yet appeared to justify their separation. They hold themselves aloof: they feel the disproportion between their faculties and the work offered them, and they prefer to ramble in the country and perish of *ennui*, to the degradation of such charities and such ambitions as the city can propose to them. They are striking work, and crying out for somewhat worthy to do! What they do, is done only because they are overpowered by the humanities that speak on all sides; and they consent to such labour as is open to them, though to their lofty dream the writing of *Iliads* or *Hamlets*, or the building of cities or empires seems drudgery.

Now everyone must do after his kind, be he asp or angel, and these must. The question, which a wise man and a student of modern history will ask, is, what that kind is? And truly, as in ecclesiastical history we take so much pains to know what the Gnostics, what the Essenes, what the Manichees, and what the Reformers believed, it would not misbecome us to inquire nearer home, what these companions and contemporaries of ours think and do, at least so far as these thoughts and actions appear to be not accidental and personal, but common to many, and the inevitable flower of the Tree of Time. Our American literature and spiritual history are, we confess, in the optative mood; but whose knows these seething brains, these admirable radicals, these unsocial worshippers, these talkers who talk the sun and moon away, will believe that this heresy cannot pass away without leaving its mark.

to live in the country rather than in the town, and to find their tasks and amusements in solitude. Society, to be sure, does not like this very well; it saith, Whoso goes to walk alone, accuses the whole world; he declareth all to be unfit to be his companions; it is very uncivil, nay, insulting; Society will retaliate. Meantime, this retirement does not proceed from any whim on the part of these separators; but if any one will take pains to talk with them, he will find that this part is chosen both from temperamert and from principle: with some unwillingness, too, and as a choice of the less of two evils; for these persons are not by nature melancholy, sour, and unsocial—they are not stockish or brute—but joyous; susceptible, affectionate; they have even more than others a great wish to be loved. Like the young Mozart, they are rather ready to cry ten times a day, "But are you sure you love me?" Nay, if they tell you their whole thought, they will own that love seems to them the last and highest gift of nature; that there are persons whom in their hearts they daily thank for existing—persons whose faces are perhaps unknown to them, but whose fame and spirit have penetrated their solitude—and for whose sake they wish to exist. To behold the beauty of another character, which inspires a new interest in our own; to behold the beauty lodged in a human being, with such vivacity of apprehension, that I am instantly forced home to inquire if I am not deformity itself: to behold in another the expression of a love so high that it assures itself—assures itself also to me against every possible casualty except my unworthiness:—these are degrees on the scale of human happiness, to which they have ascended; and it is a fidelity to this sentiment which has made common association distasteful to them. They wish a just and even fellowship, or none. They cannot gossip with you, and they do not wish, as they are sincere and religious, to gratify any mere curiosity which you may entertain. Like fairies, they do not wish to be spoken of. Love me, they say, but do not ask who is my cousin and my uncle. If you do not need to hear my thought, because you can read it in my face and behaviour, then I will tell it you from sunrise to sunset. If you cannot divine it, you would not understand what I say. I will not molest myself for you. I do not wish to be profaned.

And yet, it seems as if this loneliness, and not this love, would prevail in their circumstances, because of the extravagant demand they make on human nature. That, indeed, constitutes a new feature in their portrait, that they are the most exacting

and extortionate critics. Their quarrel with every man they meet, is not with his kind, but with his degree. There is not enough of him—that is the only fault. They prolong their privilege of childhood in this wise, of doing nothing—but making immense demands on all the gladiators in the lists of action and fame. They make us feel the strange disappointment which overcasts every human youth. So many promising youths, and never a finished man! The profound nature will have a savage rudeness; the delicate one will be shallow, or the victim of sensibility; the richly accomplished will have some capital absurdity; and so every piece has a crack. 'Tis strange, but this masterpiece is the result of such an extreme delicacy, that the most unobserved flaw in the boy will neutralize the most aspiring genius, and spoil the work. Talk with a seaman of the hazards to life in his profession, and he will ask you, "Where are the old sailors? do you not see that all are young men?" And we, on this sea of human thought, in like manner inquire, Where are the old idealists? where are they who represented to the last generation that extravagant hope, which a few happy aspirants suggest to ours? In looking at the class of counsel, and power, and wealth, and at the matronage of the land, amidst all the prudence and all the triviality, one asks, Where are they who represented genius, virtue, the invisible and heavenly world, to these? Are they dead—taken in early ripeness to the gods—as ancient wisdom foretold their fate? Or did the high idea die out of them, and leave their unperfumed body as its tomb and tablet, announcing to all that the celestial inhabitant, who once gave them beauty, had departed? Will it be better with the new generation? We easily predict a fair future to each new candidate who enters the lists, but we are frivolous and volatile, and by low aims and ill example do what we can to defeat this hope. Then these youths bring us a rough but effectual aid. By their unconcealed dissatisfaction, they expose our poverty, and the insignificance of man to man. A man is a poor liminary benefactor. He ought to be a shower of benefits—a great influence, which should never let his brother go, but should refresh old merits continually with new ones; so that, though absent, he should never be out of my mind, his name never far from my lips; but if the earth should open at my side, or my last hour were come, his name should be the prayer I should utter to the Universe. But in our experience, man is cheap, and friendship wants its deep sense. We affect to dwell with our friends in their absence, but we do not; when deed, word, or letter comes not, they let us go. These exacting children advertise us of our wants. There is no compliment, no smooth speech with them; they pay you only this one compliment, of

friends, whereof poet and priest cannot choose but stand in awe; and what if they eat clouds, and drink wind, they have not been without service to the race of man.

With this passion for what is great and extraordinary, it cannot be wondered at, that they are repelled by vulgarity and frivolity in people. They say to themselves, It is better to be alone than in bad company. And it is really a wish to be met—the wish to find society for their hope and religion—which prompts them to shun what is called society. They feel that they are never so fit for friendship, as when they have quitted mankind, and taken themselves to friend. A picture, a book, a favourite spot in the hills or the woods, which they can people with the fair and worthy creation of the fancy, can give them often forms so vivid, that these for the time shall seem real, and society the illusion.

But their solitary and fastidious manners not only withdraw them from the conversation, but from the labours of the world; they are not good citizens, not good members of society; unwillingly they bear their part of the public and private burdens; they do not willingly share in the public charities, in the public religious rites, in the enterprises of education, of missions foreign and domestic, in the abolition of the slave-trade, or in the temperance society. They do not even like to vote. The philanthropists inquire whether Transcendentalism does not mean sloth: they had as lief hear that their friend is dead, as that he is a Transcendentalist; for then is he paralyzed, and can never do anything for humanity. What right, cries the good world, has the man of genius to retreat from work, and indulge himself? The popular literary creed seems to be, 'I am a sublime genius; I ought not therefore to labour.' But genius is the power to labour better and more availably. Deserve thy genius: exalt it. The good, the illuminated, sit apart from the rest, censuring their dulness and vices, as if they thought that, by sitting very grand in their chairs, the very brokers, attorneys, and congressmen would see the error of their ways, and flock to them. But the good and wise must learn to act, and carry salvation to the combatants and demagogues in the dusty arena below.

On the part of these children, it is replied, that life and their faculty seem to them gifts too rich to be squandered on such trifles as you propose to them. What you call your fundamental institutions, your great and holy causes, seem to them great abuses, and, when nearly seen, paltry matters. Each 'Cause,' as it is called—say Abolition, Temperance, say

Calvinism, or Unitarianism—becomes speedily a little shop, where the article, let it have been at first never so subtle and ethereal, is now made up into portable and convenient cakes, and retailed in small quantities to suit purchasers. You make very free use of these words 'great' and 'holy,' but few things appear to them such. Few persons have any magnificence of nature to inspire enthusiasm, and the philanthropies and charities have a certain air of quackery. As to the general course of living, and the daily employments of men, they cannot see much virtue in these, since they are parts of this vicious circle; and, as no great ends are answered by the men, there is nothing noble in the arts by which they are maintained. Nay, they have made the experiment, and found that, from the liberal professions to the coarsest manual labour, and from the courtesies of the academy and the college to the conventions of the cotillon-room and the morning call, there is a spirit of cowardly compromise and seeming, which intimates a frightful scepticism, a life without love, and an activity without an aim.

Unless the action is necessary, unless it is adequate, I do not wish to perform it. I do not wish to do one thing but once. I do not love routine. Once possessed of the principle, it is equally easy to make four or forty thousand applications of it. A great man will be content to have indicated in any the slightest manner his perception of the reigning Idea of his time, and will leave to those who like it the multiplication of examples. When he has hit the white, the rest may shatter the target. Every thing admonishes us how needlessly long life is. Every moment of a hero so raises and cheers us, that a twelvemonth is an age. All that the brave Xanthus brings home from his wars, is the recollection that, at the storming of Samos, "in the heat of the battle, Pericles smiled on me, and passed on to another detachment." It is the quality of the moment, not the number of days, of events, or of actors, that imports.

New, we confess, and by no means happy, is our condition: if you want the aid of our labour, we ourselves stand in greater want of the labour. We are miserable with inaction. We perish of rest and rust: but we do not like your work.

'Then,' says the world. 'show me your own.'

'We have none.'

'What will you do, then?' cries the world.

'We will wait.'

'How long?'

'Until the Universe rises up and calls us to work.'

'But whilst you wait, you grow old and useless.'

'Be it so: I can sit in a corner and *perish* (as you call it),

but I will not move until I have the highest command. If no call should come for years, for centuries, then I know that the want of the Universe is the attestation of faith by my abstinence. Your virtuous projects, so called, do not cheer me. I know that which shall come will cheer me. If I cannot work, at least I need not lie. All that is clearly due to-day is not to lie. In other places, other men have encountered sharp trials, and have behaved themselves well. The martyrs were sawn asunder, or hung alive on meat-hooks. Cannot we screw our courage to patience and truth, and without complaint, or even with good-humour, await our turn of action in the Infinite Counsels?"

But, to come a little closer to the secret of these persons, we must say, that to them it seems a very easy matter to answer the objections of the man of the world, but not so easy to dispose of the doubts and objections that occur to themselves. They are exercised in their own spirit with queries, which acquaint them with all adversity, and with the trials of the bravest heroes. When I asked them concerning their private experience, they answered somewhat in this wise: It is not to be denied that there must be some wide difference between my faith and other faith; and mine is a certain brief experience, which surprised me in the highway or in the market, in some place, at some time—whether in the body or out of the body. God knoweth—and made me aware that I had played the fool with fools all this time, but that law existed for me and for all; that to me belonged trust, a child's trust and obedience, and the worship of ideas, and I should never be fool more. Well, in the space of an hour, probably, I was let down from this height; I was at my old tricks, the selfish member of a selfish society. My life is superficial, takes no root in the deep world; I ask, When shall I die, and be relieved of the responsibility of seeing an Universe which I do not use? I wish to exchange this flash-of-lightning faith for continuous daylight, this fever-glow for a benign climate.

These two states of thought diverge every moment, and stand in wild contrast. To him who looks at his life from these moments of illumination, it will seem that he skulks and plays a mean, shiftless, and subaltern part in the world. That is to be done which he has not skill to do, or to be said which others can say better, and he lies by, or occupies his hands with some plaything, until his hour comes again. Much of our reading, much of our labour, seems mere waiting; it was not that we were born for. Any other could do it as well, or better. So little skill enters into these works, so little do they mix with the divine life, that it really signifies little what we do, whether we turn a grindstone, or ride, or run, or make

fortunes, or govern the state. The worst feature of this double consciousness is, that the two lives, of the understanding and of the soul, which we lead, really show very little relation to each other, never meet and measure each other; one prevails now, all buzz and din; and the other prevails then, all infinitude and paradise; and, with the progress of life, the two discover no greater disposition to reconcile themselves. Yet, what is my faith? What am I? What but a thought of serenity and independence, an abode in the deep blue sky? Presently the clouds shut down again; yet we retain the belief that this pretty web we weave will at last be overshoot and reticulated with veins of the blue, and that the moments will characterize the days. Patience, then, is for us, is it not? Patience, and still patience. When we pass, as presently we shall, into some new infinitude, out of this Iceland of negations, it will please us to reflect that, though we had few virtues or consolations, we bore with our indigence, nor once strove to repair it with hypocrisy or false heat of any kind.

But this class are not sufficiently characterized, if we omit to add that they are lovers and worshippers of Beauty. In the eternal trinity of Truth, Goodness, and Beauty, each in its perfection including the three, they prefer to make Beauty the sign and head. Something of the same taste is observable in all the moral movements of the time, in the religious and benevolent enterprises. They have a liberal, even an æsthetic spirit. A reference to Beauty in action sounds, to be sure, a little hollow and ridiculous, in the ears of the old church. In politics, it has often sufficed, when they treated of justice, if they kept the bounds of selfish calculation. If they granted restitution, it was prudence which granted it. But the justice which is now claimed for the black, and the pauper, and the drunkard is for Beauty—is for a necessity to the soul of the agent, not of the beneficiary. I say, this is the tendency, not yet the realization. Our virtue totters and trips, does not yet walk firmly. Its representatives are austere; they preach and denounce; their rectitude is not yet a grace. They are still liable to that slight taint of burlesque which, in our strange world, attaches to the zealot. A saint should be as dear as the apple of the eye. Yet we are tempted to smile, and we flee from the working to the speculative reformer, to escape that same slight ridicule. Alas for these days of derision and criticism! We call the Beautiful the highest, because it appears to us the golden mean, escaping the dowdiness of the good, and the heartlessness of the true.—They are lovers of nature also, and find an indemnity in the inviolable order of the world for the violated order and grace of man.

There is, no doubt, a great deal of well-founded objection to be spoken or felt against the sayings and doings of this class, some of whose traits we have selected; no doubt, they will lay themselves open to criticism and to lampoons, and as ridiculous stories will be told of them as of any. There will be cant and pretension; there will be subtilty and moonshine. These persons are of unequal strength, and do not all prosper. They complain that everything around them must be denied; and if feeble, it takes all their strength to deny, before they can begin to lead their own life. Grave seniors insist on their respect to this institution, and that usage; to an obsolete history; to some vocation, or college, or etiquette, or beneficiary, or charity, or morning or evening call, which they resist, as what does not concern them. But it costs such sleepless nights, alienations and misgivings—they have so many moods about it;—these old guardians never change *their* minds; they have but one mood on the subject, namely, that Antony is very perverse—that it is quite as much as Antony can do, to assert his rights, abstain from what he thinks foolish, and keep his temper. He cannot help the reaction of this injustice in his own mind. He is braced-up and stilted; all freedom and flowing genius, all sallies of wit and frolic nature are quite out of the question; it is well if he can keep from lying, injustice, and suicide. This is no time for gaiety and grace. His strength and spirits are wasted in rejection. But the strong spirits overpower those around them without effort. Their thought and emotion comes in like a flood, quite withdraws them from all notice of these carping critics; they surrender themselves with glad heart to the heavenly guide, and only by implication reject the clamorous nonsense of the hour. Grave seniors talk to the deaf—church and old book mumble and ritualize to an unheeding, pre-occupied and advancing mind, and thus they by happiness of greater momentum lose no time, but take the right road at first.

But all these of whom I speak are not proficient; they are novices; they only show the road in which man should travel, when the soul has greater health and prowess. Yet let them feel the dignity of their charge, and deserve a larger power. Their heart is the ark in which the fire is concealed, which shall burn in a broader and universal flame. Let them obey the Genius then most when his impulse is wildest; then most when he seems to lead to uninhabitable deserts of thought and life; for the path which the hero travels alone is the highway of health and benefit to mankind. What is the privilege and nobility of our nature, but its persistency, through its power to attach itself to what is permanent?

Society also has its duties in reference to this class, and must

behold them with what charity it can. Possibly some benefit may yet accrue from them to the state. In our Mechanics' Fair, there must be not only bridges, ploughs, carpenters' planes, and baking troughs, but also some few finer instruments—rain gauges, thermometers, and telescopes; and in society, besides farmers, sailors, and weavers, there must be a few persons of purer fire kept specially as gauges and meters of character; persons of a fine, detecting instinct, who betray the smallest accumulations of wit and feeling in the bystander. Perhaps too there might be room for the excitors and monitors; collectors of the heavenly spark with power to convey the electricity to others. Or, as the storm-tossed vessel at sea speaks the frigate or 'line packet' to learn its longitude, so it may not be without its advantage that we should now and then encounter rare and gifted men, to compare the points of our spiritual compass, and verify our bearings from superior chronometers.

Amidst the downward tendency and proneness of things, when every voice is raised for a new road or another statute, or a subscription of stock, for an improvement in dress, or in dentistry, for a new house or a larger business, for a political party, or the division of an estate—will you not tolerate one or two solitary voices in the land, speaking for thoughts and principles not marketable or perishable? Soon these improvements and mechanical inventions will be superseded; these modes of living lost out of memory; these cities rotted, ruined by war, by new inventions, by new seats of trade, or the geologic changes:—all gone, like the shells which sprinkle the seabeach with a white colony to-day, for ever renewed to be for ever destroyed. But the thoughts which these few hermits strove to proclaim by silence, as well as by speech, not only by what they did, but by what they forebore to do, shall abide in beauty and strength, to re-organize themselves in nature, to invest themselves anew in other, perhaps higher endowed and happier mixed clay than ours, in fuller union with the surrounding system.

THE YOUNG AMERICAN.

A LECTURE READ BEFORE THE MERCANTILE LIBRARY ASSOCIATION
BOSTON, FEBRUARY 7, 1844.

GENTLEMEN :

IT is remarkable, that our people have their intellectual culture from one country, and their duties from another. This false state of things is newly in a way to be corrected. America is beginning to assert itself to the senses and to the imagination of her children, and Europe is receding in the same degree. This their reaction on education gives a new importance to the internal improvements and to the politics of the country. Who has not been stimulated to reflection by the facilities now in progress of construction for travel and the transportation of goods in the United States?

This rage for road building is beneficent for America, where vast distance is so main a consideration in our domestic politics and trade, inasmuch as the great political promise of the invention is to hold the Union staunch, whose days seemed already numbered by the mere inconvenience of transporting representatives, judges, and officers across such tedious distances of land and water. Not only is distance annihilated, but when, as now, the locomotive and the steamboat, like enormous shuttles, shoot every day across the thousand various threads of national descent and employment, and bind them fast in one web, an hourly assimilation goes forward, and there is no danger that local peculiarities and hostilities should be preserved.

1. But I hasten to speak of the utility of these improvements in creating an American sentiment. An unlooked-for consequence of the railroad, is the increased acquaintance it has given the American people with the boundless resources of their own soil. If this invention has reduced England to a third of its size, by bringing people so much nearer, in this country it has given a new celerity to *time*, or anticipated by fifty years the planting of tracts of land, the choice of water privileges, the working of mines, and other natural advantages. Railroad iron is a magician's rod, in its power to evoke the sleeping energies of land and water.

The railroad is but one arrow in our quiver, though it has great value as a sort of yard-stick, and surveyor's line. The bountiful continent is ours, state on state, and territory on territory, to the waves of the Pacific sea;

"Our garden is the immeasurable earth,
The heaven's blue pillars are Medea's house."

The task of surveying, planting, and building upon this immense tract, requires an education and a sentiment commensurate thereto. A consciousness of this fact, is beginning to take the place of the purely trading spirit and education which sprang up whilst all the population lived on the fringe of sea-coast. And even on the coast, prudent men have begun to see that every American should be educated with a view to the values of land. The arts of engineering and of architecture are studied; scientific agriculture is an object of growing attention; the mineral riches are explored; limestone, coal, slate, and iron; and the value of timber-lands is enhanced.

Columbus alleged as a reason for seeking a continent in the West, that the harmony of nature required a great tract of land in the western hemisphere, to balance the known extent of land in the eastern; and it now appears that we must estimate the native values of this broad region to redress the balance of our own judgments, and appreciate the advantages opened to the human race in this country, which is our fortunate home. The land is the appointed remedy for whatever is false and fantastic in our culture. The continent we inhabit is to be physic and food for our mind, as well as our body. The land, with its tranquillizing, sanative influences, is to repair the errors of a scholastic and traditional education, and bring us into just relations with men and things.

The habit of living in the presence of these invitations of natural wealth is not inoperative; and this habit, combined with the moral sentiment which, in the recent years, has interrogated every institution, usage, and law, has, naturally, given a strong direction to the wishes and aims of active young men to withdraw from cities, and cultivate the soil. This inclination has appeared in the most unlooked-for quarters, in men supposed to be absorbed in business, and in those connected with the liberal professions. And, since the walks of trade were crowded, whilst that of agriculture cannot easily be, inasmuch as the farmer who is not wanted by others can yet grow his own bread, whilst the manufacturer or the trader, who is not wanted, cannot,—this seemed a happy tendency. For, beside all the moral benefit which we may expect from the farmer's profession, when a man enters it considerably, this promised the conquering of the soil, plenty, and beyond this, the adorning of the country with every advantage and ornament which labour, ingenuity, and affection for a man's home, could suggest.

Meantime, with cheap land, and the pacific disposition of the people, everything invites to the arts of agriculture, of gardening, and domestic architecture. Public gardens, on the scale of such plantations in Europe and Asia, are now unknown to

us. There is no feature of the old countries that strikes an American with more agreeable surprise than the beautiful gardens of Europe; such as the Boboli in Florence, the Villa Borghese in Rome, the Villa d'Este in Tivoli, the gardens at Munich, and at Frankfort-on-the-Maine: works easily imitated here, and which might well make the land dear to the citizen, and inflame patriotism. It is the fine art which is left for us, now that sculpture, painting, and religious and civil architecture have become effete, and have passed into second childhood. We have twenty degrees of latitude wherein to choose a seat, and the new modes of travelling enlarge the opportunity of selection, by making it easy to cultivate very distant tracts, and yet remain in strict intercourse with the centres of trade and population. And the whole force of all the arts goes to facilitate the decoration of lands and dwellings. A garden has this advantage, that it makes it indifferent where you live. A well-laid garden makes the face of the country of no account; let that be low or high, grand or mean, you have made a beautiful abode worthy of man. If the landscape is pleasing, the garden shows it,—if tame, it excludes it. A little grove, which any farmer can find, or cause to grow near his house, will, in a few years, make cataracts and chains of mountains quite unnecessary to his scenery; and he is so contented with his alleys, woodlands, orchards, and river, that Niagara, and the Notch of the White Hills, and Nantasket Beach, are superfluities. And yet the selection of a fit house-lot has the same advantage over an indifferent one, as the selection to a given employment of a man who has a genius for that work. In the last case, the culture of years will never make the most painstaking apprentice his equal: no more will gardening give the advantage of a happy site to a house in a hole or on a pinnacle. In America, we have hitherto little to boast in this kind. The cities drain the country of the best part of its population: the flower of the youth, of both sexes, goes into the towns, and the country is cultivated by a so much inferior class. The land,—travel a whole day together,—looks poverty-stricken, and the buildings plain and poor. In Europe, where society has an aristocratic structure, the land is full of men of the best stock, and the best culture, whose interest and pride it is to remain half the year on their estates, and to fill them with every convenience and ornament. Of course, these make model farms, and model architecture, and are a constant education to the eye of the surrounding population. Whatever events in progress shall go to disgust men with cities, and infuse into them the passion for country life, and country pleasures, will render a service to the whole face of this continent, and will further the most poetic of all the occupations.

of real life, the bringing out by art the native but hidden graces of the landscape.

I look on such improvements, also, as directly tending to endear the land to the inhabitant. Any relation to the land, the habit of tilling it, or mining it, or even hunting on it, generates the feeling of patriotism. He who keeps shop on it, or he who merely uses it as a support to his desk and ledger, or to his manufactory, values it less. The vast majority of the people of this country live by the land, and carry its quality in their manners and opinions. We in the Atlantic states, by position, have been commercial, and have, as I said, imbibed easily an European culture. Luckily for us, now that steam has narrowed the Atlantic to a strait, the nervous, rocky West is intruding a new and continental element into the national mind, and we shall yet have an American genius. How much better when the whole land is a garden, and the people have grown up in the bowers of a paradise. Without looking, then, to those extraordinary social influences which are now acting in precisely this direction, but only at what is inevitably doing around us, I think we must regard the *land* as a commanding and increasing power on the citizen, the sanative and Americanizing influence, which promises to disclose new virtues for ages to come.

2. In the second place, the uprise and culmination of the new and anti-feudal power of Commerce, is the political fact of most significance to the American at this hour.

We cannot look on the freedom of this country, in connection with its youth, without a presentiment that here shall laws and institutions exist on some scale of proportion to the majesty of nature. To men legislating for the area betwixt the two oceans, betwixt the snows and the tropics, somewhat of the gravity of nature will infuse itself into the code. A heterogeneous population crowding on all ships from all corners of the world to the great gates of North America, namely, Boston, New York, and New Orleans, and thence proceeding inward to the prairie and the mountains, and quickly contributing their private thought to the public opinion, their toll to the treasury, and their vote to the election, it cannot be doubted that the legislation of this country should become more catholic and cosmopolitan than that of any other. It seems so easy for America to inspire and express the most expansive and humane spirit; new-born, free, healthful, strong, the land of the labourer, of the democrat, of the philanthropist, of the believer, of the saint, she should speak for the human race. It is the country of the Future. From Washington, proverbially 'the city of magnificent distances,' through all its cities, states, and territories, it is a country of beginnings, of projects, of designs, of expectations.

Gentlemen, there is a sublime and friendly Destiny by which the human race is guided,—the race never dying, the individual never spared,—to results affecting masses and ages. Men are narrow and selfish, but the Genius of Destiny is not narrow, but beneficent. It is not discovered in their calculated and voluntary activity, but in what befalls, with or without their design. Only what is inevitable interests us, and it turns out that love and good are inevitable, and in the course of things. That Genius has infused itself into nature. It indicates itself by a small excess of good, a small balance in brute facts always favourable to the side of reason. All the facts in any part of nature shall be tabulated, and the results shall indicate the same security and benefit; so slight as to be hardly observable, and yet it is there. The sphere is flattened at the poles, and swelled at the equator; a form flowing necessarily from the fluid state, yet the form, the mathematician assures us, required to prevent the protuberances of the continent, or even of lesser mountains cast up at any time by earthquakes, from continually deranging the axis of the earth. The census of the population is found to keep an invariable equality in the sexes, with a trifling predominance in favour of the male, as if to counterbalance the necessarily increased exposure of male life in war, navigation, and other accidents. Remark the unceasing effort throughout nature at somewhat better than the actual creatures: *amelioration in nature*, which alone permits and authorizes amelioration in mankind. The population of the world is a conditional population; these are not the best, but the best that could live in the existing state of soils, gases, animals, and morals: the best that could *yet* live; there shall be a better, please God. This Genius, or Destiny, is of the sternest administration, though rumours exist of its secret tenderness. It may be styled a cruel kindness, serving the whole even to the ruin of the member; a terrible communist, reserving all profits to the community, without dividend to individuals. Its law is, you shall have everything as a member, nothing to yourself. For Nature is the noblest engineer, yet uses a grinding economy, working up all that is wasted to-day into to-morrow's creation;—not a superfluous grain of sand, for all the ostentation she makes of expense and public works. It is because Nature thus saves and uses, labouring for the general, that we poor particulars are so crushed and straitened, and find it so hard to live. She flung us out in her plenty, but we cannot shed a hair, or a paring of a nail, but instantly she snatches at the shred, and appropriates it to the general stock. Our condition is like that of the poor wolves: if one of the flock wound himself, or so much as limp, the rest eat him up incontinently. That serene Power interposes the check upon the caprices

and officiousness of our wills. Its charity is not our charity. One of its agents is our will, but that which expresses itself in our will, is stronger than our will. We are very forward to help it, but it will not be accelerated. It resists our meddling, eleemosynary contrivances. We devise sumptuary and relief laws, but the principle of population is always reducing wages to the lowest pittance on which human life can be sustained. We legislate against forestalling and monopoly; we would have a common granary for the poor; but the selfishness which hoards the corn for high prices, is the preventive of famine; and the law of self-preservation is surer policy than any legislation can be. We concoct eleemosynary systems, and it turns out that our charity increases pauperism. We inflate our paper currency, we repair commerce with unlimited credit, and are presently visited with unlimited bankruptcy.

It is easy to see that the existing generation are conspiring with a beneficence, which, in its working for coming generations, sacrifices the passing one, which infatuates the most selfish men to act against their private interest for the public welfare. We build railroads, we know not for what or for whom; but one thing is certain, that we who build will receive the very smallest share of benefit. Benefit will accrue; they are essential to the country, but that will be felt not until we are no longer countrymen. We do the like in all matters :—

“Man’s heart the Almighty to the Future set
By secret and inviolable springs.”

We plant trees, we build stone houses, we redeem the waste, we make prospective laws, we found colleges and hospitals, for remote generations. We should be mortified to learn that the little benefit we chanced in our own persons to receive was the utmost they would yield.

The history of commerce, is the record of this beneficent tendency. The patriarchal form of government readily becomes despotic, as each person may see in his own family. Fathers wish to be the fathers of the minds of their children, and behold with impatience a new character and way of thinking presuming to show itself in their own son or daughter. This feeling, which all their love and pride in the powers of their children cannot subdue, becomes petulance and tyranny when the head of the clan, the emperor of an empire, deals with the same difference of opinion in his subjects. Difference of opinion is the one crime which kings never forgive. An empire is an immense egotism. “I am the State,” said the French Louis. When a French ambassador mentioned to Paul of Russia, that a man of consequence in St. Petersburg was interesting himself in some matter, the Czar interrupted

him—"There is no man of consequence in this empire but he with whom I am actually speaking; and so long only as I am speaking to him, is he of any consequence." And the Emperor Nicholas is reported to have said to his council. "The age is embarrassed with new opinions; rely on me, Gentlemen, I shall oppose an iron will to the progress of liberal opinions."

It is easy to see that this patriarchal or family management gets to be rather troublesome to all but the papa; the sceptre comes to be a crow-bar. And this unpleasant egotism, Feudalism opposes, and finally destroys. The king is compelled to call in the aid of his brothers and cousins, and remote relations, to help him keep his overgrown house in order; and this club of noblemen always come at last to have a will of their own; they combine to brave the sovereign, and call in the aid of the people. Each chief attaches as many followers as he can, by kindness, maintenance, and gifts; and as long as war lasts, the nobles, who must be soldiers, rule very well. But when peace comes, the nobles prove very whimsical and uncomfortable masters; their frolics turn out to be insulting and degrading to the commoner. Feudalism grew to be a bandit and brigand.

Meantime Trade had begun to appear: Trade, a plant which grows wherever there is peace, as soon as there is peace, and as long as there is peace. The luxury and necessity of the noble fostered it. And as quickly as men go to foreign parts, in ships or caravans, a new order of things springs up; new command takes place, new servants and new masters. Their information, their wealth, their correspondence, have made them quite other men than left their native shore. *They* are nobles now, and by another patent than the king's. Feudalism had been good, had broken the power of the kings, and had some good traits of its own; but it had grown mischievous, it was time for it to die, and, as they say of dying people, all its faults came out. Trade was the strong man that broke it down, and raised a new and unknown power in its place. It is a new agent in the world, and one of great function; it is a very intellectual force. This displaces physical strength, and instals computation, combination, information, science, in its room. It calls out all force of a certain kind that slumbered in the former dynasties. It is now in the midst of its career. Feudalism is not ended yet. Our governments still partake largely of that element. Trade goes to make the governments insignificant, and to bring every kind of faculty of every individual that can in any manner serve any person, *on sale*. Instead of a huge Army and Navy, and Executive Departments, it converts Government into an Intel-

licence-Office, where every man may find what he wishes to buy, and expose what he has to sell, not only produce and manufactures, but art, skill, and intellectual and moral values. This is the good and this the evil of trade, that it would put everything into market, talent, beauty, virtue, and man himself.

By this means, however, it has done its work. It has its faults, and will come to an end, as the others do. The philosopher and lover of man have much harm to say of trade; but the historian will see that trade was the principle of Liberty; that trade planted America and destroyed Feudalism; that it makes peace and keeps peace, and it will abolish slavery. We complain of its oppression of the poor, and of its building up a new aristocracy on the ruins of the aristocracy it destroyed. But the aristocracy of trade has no permanence, is not entailed, was the result of toil and talent, the result of merit of some kind, and is continually falling, like the waves of the sea, before new claims of the same sort. Trade is an instrument in the hands of that friendly Power which works for us in our own despite. We design it thus and thus; it turns out otherwise and far better. This beneficent tendency, omnipotent without violence, exists and works. Every line of history inspires a confidence that we shall not go far wrong; that things mend. That is the moral of all we learn, that it warrants Hope, the prolific mother of reforms. Our part is plainly not to throw ourselves across the track, to block improvement, and sit till we are stone, but to watch the uprise of successive mornings, and to conspire with the new works of new days. Government has been a fossil; it should be a plant. I conceive that the office of statute law should be to express, and not to impede the mind of mankind. New thoughts, new things. Trade was one instrument, but Trade is also but for a time, and must give way to somewhat broader and better, whose signs are already dawning in the sky.

3. I pass to speak of the signs of that which is the sequel of trade.

In consequence of the revolution in the state of society wrought by trade, Government in our times is beginning to wear a clumsy and cumbrous appearance. We have already seen our way to shorter methods. The time is full of good signs. Some of them shall ripen to fruit. All this beneficent socialism is a friendly omen, and the swelling cry of voices for the education of the people, indicates that Government has other offices than those of banker and executioner. Witness the new movements in the civilized world, the Communism of France, Germany, and Switzerland; the Trades' Unions: the English League against the Corn Laws; and the whole

Industrial Statistics, so called. In Paris, the blouse, the badge of the operative, has begun to make its appearance in the saloons. Witness, too, the spectacle of three Communities which have within a very short time sprung up within this Commonwealth, besides several others undertaken by citizens of Massachusetts within the territory of other States. These proceeded from a variety of motives, from an impatience of many usages in common life, from a wish for greater freedom than the manners and opinions of society permitted, but in great part from a feeling that the true offices of the State, the State had let fall to the ground; that in the scramble of parties for the public purse, the main duties of government were omitted—the duty to instruct the ignorant, to supply the poor with work and with good guidance. These communists preferred the agricultural life as the most favourable condition for human culture; but they thought that the farm, as we manage it, did not satisfy the right ambition of man. The farmer, after sacrificing pleasure, taste, freedom, thought, love, to his work, turns out often a bankrupt, like the merchant. This result might well seem astounding. All this drudgery, from cockerowing to starlight, for all these years, to end in mortgages and the auctioneer's flag, and removing from bad to worse. It is time to have the thing looked into, and with a sifting criticism ascertained who is the fool. It seemed a great deal worse, because the farmer is living in the same town with men who pretend to know exactly what he wants. On one side, is agricultural chemistry, coolly exposing the nonsense of our spendthrift agriculture and ruinous expense of manures, and offering, by means of a tea-spoonful of artificial guano, to turn a sandbank into corn; and, on the other, the farmer, not only eager for the information, but with bad crops and in debt and bankruptcy, for want of it. Here are Etzlers and mechanical projectors, who, with the Fourierists, undoubtedly affirm that the smallest union would make every man rich;—and, on the other side, a multitude of poor men and women seeking work, and who cannot find enough to pay their board. The science is confident, and surely the poverty is real. If any means could be found to bring these two together!

This was one design of the projectors of the Associations which are now making their first feeble experiments. They were founded in love, and in labour. They proposed, as you know, that all men should take a part in the manual toil, and proposed to amend the condition of men, by substituting harmonious for hostile industry. It was a noble thought of Fourier, which gives a favourable idea of his system, to distinguish in his Phalanx a class as the Sacred Band, by

whom whatever duties were disagreeable, and likely to be omitted, were to be assumed.

At least, an economical success seemed certain for the enterprise, and that agricultural association must, sooner or later, fix the price of bread, and drive single farmers into association, in self-defence; as the great commercial and manufacturing companies had already done. The Community is only the continuation of the same movement which made the joint-stock companies for manufactures, mining, insurance, banking, and so forth. It has turned out cheaper to make calico by companies; and it is proposed to plant corn, and to bake bread by companies.

Undoubtedly, abundant mistakes will be made by these first adventurers, which will draw ridicule on their schemes. I think, for example, that they exaggerate the importance of a favourite project of theirs, that of paying talent and labour at one rate, paying all sorts of service at one rate, say ten cents the hour. They have paid it so; but not an instant would a dime remain a dime. In one hand it became an eagle as it fell, and in another hand a copper cent. For the whole value of the dime is in knowing what to do with it. One man buys with it a land-title of an Indian, and makes his posterity princes; or buys corn enough to feed the world; or pen, ink, and paper, or a painter's brush, by which he can communicate himself to the human race as if he were fire; and the other buys barley candy. Money is of no value, it cannot spend itself. All depends on the skill of the spender. Whether, too, the objection almost universally felt by such women in the community as were mothers, to an associate life, to a common table, and a common nursery, &c., setting a higher value on the private family with poverty, than on an association with wealth, will not prove insuperable, remains to be determined.

But the Communities aimed at a higher success in securing to all their members an equal and thorough education. And on the whole, one may say, that aims so generous, and so forced on them by the times, will not be relinquished, even if these attempts fail, but will be prosecuted until they succeed.

This is the value of the Communities; not what they have done, but the revolution which they indicate as on the way. Yes, Government must educate the poor man. Look across the country from any hill-side around us, and the landscape seems to crave Government. The actual differences of men must be acknowledged, and met with love and wisdom. These rising grounds which command the champaign below, seem to ask for lords, true lords, *land-lords*, who understand the land and its uses, and the applicabilities of men, and whose government would be what it should, namely, mediation between

want and supply. How gladly would each citizen pay a commission for the support and continuation of good guidance. None should be a governor who has not a talent for governing. Now many people have a native skill for carving out business for many hands; a genius for the disposition of affairs; and are never happier than when difficult practical questions, which embarrass other men, are to be solved. Ali lies in light before them! they are in their element. Could any means be contrived to appoint only these! There really seems a progress towards such a state of things, in which this work shall be done by these natural workmen; and this, not certainly through any increased discretion shown by the citizens at elections, but by the gradual contempt into which official government falls, and the increasing disposition of private adventurers to assume its fallen functions. Thus the costly Post Office is likely to go into disuse before the private transportation-shop of Harnden and his competitors. The currency threatens to fall entirely into private hands. Justice is continually administered more and more by private reference, and not by litigation. We have feudal governments in a commercial age. It would be but an easy extension of our commercial system, to pay a private emperor a fee for services, as we pay an architect, an engineer, or a lawyer. If any man has a talent for righting wrong, for administering difficult affairs, for counselling poor farmers how to turn their estates to good husbandry, for combining a hundred private enterprises to a general benefit, let him in the county town, or in Court-street, put up his sign-board, Mr. Smith, *Governor*, Mr. Johnson, *Working king*.

How can our young men complain of the poverty of things in New England, and not feel that poverty as a demand on their charity to make New England rich? Where is he who seeing a thousand men useless and unhappy, and making the whole region forlorn by their inaction, and conscious himself of possessing the faculty they want, does not hear his call to go and be their king?

We must have kings, and we must have nobles. Nature provides such in every society,—only let us have the real instead of the titular. Let us have our leading and our inspiration from the best. In every society some men are born to rule, and some to advise. Let the powers be well directed, directed by love, and they would everywhere be greeted with joy and honour. The chief is the chief all the world over, only not his cap and his plume. It is only their dislike of the pretender, which makes men sometimes unjust to the accomplished man. If society were transparent, the noble would everywhere be gladly received and accredited, and would not be asked for his

day's work, but would be felt as benefit, inasmuch as he was noble. That were his duty and stint,—to keep himself pure and purifying, the leaven of his nation. I think I see place and duties for a nobleman in every society; but it is not to drink wine and ride in a fine coach, but to guide and adorn life for the multitude by forethought, by elegant studies, by perseverance, self-devotion, and the remembrance of the humble old friend, by making his life secretly beautiful.

I call upon you, young men, to obey your heart, and be the nobility of this land. In every age of the world, there has been a leading nation, one of a more generous sentiment, whose eminent citizens were willing to stand for the interests of general justice and humanity, at the risk of being called, by the men of the moment, chimerical and fantastic. Which should be that nation but these States? Which should lead that movement, if not New England? Who should lead the leaders, but the Young American? The people, and the world, is now suffering from the want of religion and honour in its public mind. In America, out of doors all seems a market; in doors, an air-tight stove of conventionalism. Everybody who comes into our houses savours of these habits; the men, of the market; the women, of the custom. I find no expression in our state papers or legislative debate, in our lyceums or churches, specially in our newspapers, of a high national feeling, no lofty counsels, that rightfully stir the blood. I speak of those organs which can be presumed to speak a popular sense. They recommend conventional virtues, whatever will earn and preserve property; always the capitalist; the college, the church, the hospital, the theatre, the hotel, the road, the ship, of the capitalist,—whatever goes to secure, adorn, enlarge these, is good; what jeopardizes any of these, is damnable. The 'opposition' papers, so called, are on the same side. They attack the great capitalist, but with the aim to make a capitalist of the poor man. The opposition is against those who have money, from those who wish to have money. But who announces to us in journal, or in pulpit, or in the street, the secret of heroism,

"Man alone
Can perform the impossible?"

I shall not need to go into an enumeration of our national defects and vices which require this Order of Censors in the state. I might not set down our most proclaimed offences as the worst. It is not often the worst trait that occasions the loudest outcry. Men complain of their suffering, and not of the crime. I fear little from the bad effect of Repudiation; I do not fear that it will spread. Stealing is a suicidal business; you

cannot repudiate but once. But the bold face and tardy repentance permitted to this local mischief, reveal a public mind so pre-occupied with the love of gain, that the common sentiment of indignation at fraud does not act with its natural force. The more need of a withdrawal from the crowd, and a resort to the fountain of right, by the brave. The timidity of our public opinion, is our disease, or, shall I say, the publicness of opinion, the absence of private opinion. Good-nature is plentiful, but we want justice, with heart of steel, to fight down the proud. The private mind has the access to the totality of goodness and truth, that it may be a balance to a corrupt society; and to stand for the private verdict against popular clamour, is the office of the noble. If a humane measure is propounded in behalf of the slave, or of the Irishman, or the Catholic, or for the succour of the poor, that sentiment, that project, will have the homage of the hero. That is his nobility, his oath of knighthood, to succour the helpless and oppressed; always to throw himself on the side of weakness, of youth, of hope, on the liberal, on the expansive, side, never on the defensive, the conserving, the timorous, the lock-and-bolt system. More than our good-will we may not be able to give. We have our own affairs, our own genius, which chains us to our proper work. We cannot give our life to the cause of the debtor, of the slave, or the pauper, as another is doing; but to one thing we are bound, not to blaspheme the sentiment and the work of that man, not to throw stumbling-blocks in the way of the abolitionist, the philanthropist, as the organs of influence and opinion are swift to do. It is for us to confide in the beneficent Supreme Power, and not to rely on our money, and on the state because it is the guard of money. At this moment, the terror of old people and of vicious people, is lest the Union of these States be destroyed: as if the Union had any other real basis than the good pleasure of a majority of the citizens to be united. But the wise and just man will always feel that he stands on his own feet; that he imparts strength to the state, not receives security from it; and that if all went down, he and such as he would quite easily combine in a new and better constitution. Every great and memorable community has consisted of formidable individuals, who, like the Roman or the Spartan, lent his own spirit to the state and made it great. Yet only by the supernatural is a man strong; nothing is so weak as an egotist. Nothing is mightier than we, when we are vehicles of a truth before which the state and the individual are alike ephemeral.

Gentlemen, the development of our American internal resources, the extension to the utmost of the commercial system, and the appearance of new moral causes which are to modify

the state, are giving an aspect of greatness to the Future, which the imagination fears to open. One thing is plain for all men of common sense and common conscience, that here, here in America, is the home of man. After all the deductions which are to be made for our pitiful politics, which stake every gravest national question on the silly die, whether James or whether Jonathan shall sit in the chair and hold the purse; after all the deduction is made for our frivolities and insanities, there still remains an organic simplicity and liberty, which, when it loses its balance, redresses itself presently, which offers opportunity to the human mind not known in any other region.

It is true, the public mind wants self-respect. We are full of vanity, of which the most signal proof is our sensitiveness to foreign and especially English censure. One cause of this is our immense reading, and that reading, chiefly confined to the productions of the English press. It is also true, that, to imaginative persons in this country, there is somewhat bare and bald in our short history, and unsettled wilderness. They ask, who would live in a new country, that can live in an old? and it is not strange that our youths and maidens should burn to see the picturesque extremes of an antiquated country. But it is one thing to visit the pyramids, and another to wish to live there. Would they like tithes to the clergy, and sevenths to the government, and horse-guards, and licensed press, and grief when a child is born, and threatening, starved weavers, and a pauperism now constituting one-thirteenth of the population? Instead of the open future expanding here before the eye of every boy to vastness, would they like the closing in of the future to a narrow slit of sky, and that fast contracting to be no future? One thing, for instance, the beauties of aristocracy, we commend to the study of the travelling American. The English, the most conservative people this side of India, are not sensible of the restraint, but an American would seriously resent it. The aristocracy, incorporated by law and education, degrades life for the unprivileged classes. It is a questionable compensation to the embittered feeling of a proud commoner, the reflection that a fop, who, by the magic of title paralyzes his arm, and plucks from him half the graces and rights of a man, is himself also an aspirant excluded with the same ruthlessness from higher circles, since there is no end to the wheels within wheels of this spiral heaven. Something may be pardoned to the spirit of loyalty when it becomes fantastic; and something to the imagination, for the baldest life is symbolic. Philip II. of Spain rated his ambassador for neglecting serious affairs in Italy, whilst he debated some point of honour with the French ambas-

sador; "You have left a business of importance for a ceremony." The ambassador replied, "Your majesty's self is but a ceremony." In the East, where the religious sentiment comes in to the support of the aristocracy, and in the Romish church also, there is a grain of sweetness in the tyranny; but in England, the fact seems to me intolerable, what is commonly affirmed, that such is the transcendent honour accorded to wealth and birth, that no man of letters, be his eminence what it may, is received into the best society, except as a lion and a show. The English have many virtues, many advantages, and the proudest history of the world; but they need all, and more than all the resources of the past to indemnify a heroic gentleman in that country for the mortifications prepared for him by the system of society, and which seem to impose the alternative to resist or to avoid it. That there are mitigations and practical alleviations to this rigour, is not an excuse for the rule. Commanding worth, and personal power, must sit crowned in all companies, nor will extraordinary persons be slighted or affronted in any company of civilized men. But the system is an invasion of the sentiment of justice and the native rights of men, which, however decorated, must lessen the value of English citizenship. It is for Englishmen to consider, not for us; we only say, let us live in America, too thankful for our want of feudal institutions. Our houses and towns are like mosses and lichens, so slight and new; but youth is a fault of which we shall daily mend. This land, too, is as old as the Flood, and wants no ornament or privilege which nature could bestow. Here stars, here woods, here hills, here animals, here men abound, and the vast tendencies concur of a new order. If only the men are employed in conspiring with the designs of the Spirit who led us hither, and is leading us still, we shall quickly enough advance out of all hearing of other's censures, out of all regrets of our own, into a new and more excellent social state than history has recorded.

THE CONDUCT OF LIFE.

I.—FATE.

DELICATE omens traced in air
 To the lone bard true witness bare ;
 Birds with auguries on their wings
 Chanted undeceiving things,
 Him to beckon, him to warn ;
 Well might then the poet scorn
 To learn of scribe or courier
 Hints writ in vaster character ;
 And on his mind, at dawn of day,
 Soft shadows of the evening lay.
 For the prevision is allied
 Unto the thing so signified ;
 Or say, the foresight that awaits
 Is the same Genius that creates.

IT chanced during one winter, a few years ago, that our cities were bent on discussing the theory of the Age. By an odd coincidence, four or five noted men were each reading a discourse to the citizens of Boston or New York, on the Spirit of the Times. It so happened that the subject had the same prominence in some remarkable pamphlets and journals issued in London in the same season. To me, however, the question of the times resolved itself into a practical question of the conduct of life. How shall I live? We are incompetent to solve the times. Our geometry cannot span the huge orbits of the prevailing ideas, behold their return, and reconcile their opposition. We can only obey our own polarity. 'Tis fine for us to speculate and elect our course, if we must accept an irresistible dictation.

In our first steps to gain our wishes, we come upon immovable limitations. We are fired with the hope to reform men. After many experiments, we find that we must begin earlier—at school. But the boys and girls are not docile; we can make nothing of them. We decide that they are not of good stock. We must begin our reform earlier still—at generation: that is to say, there is Fate, or laws of the world.

But, if there be irresistible dictation, this dictation understands itself. If we must accept Fate, we are not less com-

pelled to affirm liberty, the significance of the individual, the grandeur of duty, the power of character. This is true, and that other is true. But our geometry cannot span these extreme points, and reconcile them. What to do? By obeying each thought frankly, by harping, or, if you will, pounding on each string, we learn at last its power. By the same obedience to other thoughts, we learn theirs, and then comes some reasonable hope of harmonizing them. We are sure, that, though we know not how, necessity does comport with liberty, the individual with the world, my polarity with the spirit of the times. The riddle of the age has for each a private solution. If one would study his own time, it must be by this method of taking up in turn each of the leading topics which belong to our scheme of human life, and, by firmly stating all that is agreeable to experience on one, and doing the same justice to the opposing facts in the others, the true limitations will appear. Any excess of emphasis, on one part, would be corrected, and a just balance would be made.

But let us honestly state the facts. Our America has a bad name for superficialness. Great men, great nations, have not been boasters and buffoons, but perceivers of the terror of life, and have manned themselves to face it. The Spartan, embodying his religion in his country, dies before its majesty without a question. The Turk, who believes his doom is written on the iron leaf in the moment when he entered the world, rushes on the enemy's sabre with undivided will. The Turk, the Arab, the Persian, accepts the fore-ordained fate.

"On two days, it stands not to run from thy grave,
The appointed, and the unappointed day;
On the first, neither balm nor physician can save,
Nor thee, on the second, the Universe slay."

The Hindoo, under the wheel, is as firm. Our Calvinists, in the last generation, had something of the same dignity. They felt that the weight of the Universe held them down to their place. What could *they* do? Wise men feel that there is something which cannot be talked or voted away—a strap or belt which girds the world.

"The Destiny, minister general,
That executeth in the world o'er all,
The purveyance which God hath seen beforne,
So strong it is, that tho' the world had sworn
The contrary of a thing by yea or nay,
Yet sometime it shall fallen on a day
That falleth not oft in a thousand year
For, certainly, our appetites here,
Be it of war, or peace, or hate, or love,
All this is ruled by the sight above."

CHAUCER: *The Knight's Tale*.

The Greek Tragedy expressed the same sense: "Whatever is fated, that will take place. The great immense mind of Jove is not to be transgressed."

Savages cling to a local god of one tribe or town. The broad ethics of Jesus were quickly narrowed to village theologies, which preach an election or favouritism. And, now and then, an amiable parson, like Jung Stilling, or Robert Huntington, believes in a pistareen-Providence, which, whenever the good man wants a dinner, makes that somebody shall knock at his door, and leave a half-dollar. But Nature is no sentimentalist—does not cosset or pamper us. We must see that the world is rough and surly, and will not mind drowning a man or a woman; but swallows your ship like a grain of dust. The cold, inconsiderate of persons, tingles your blood, benumbs your feet, freezes a man like an apple. The diseases, the elements, fortune, gravity, lightning, respect no persons. The way of Providence is a little rude. The habit of snake and spider, the snap of the tiger and other leapers and bloody jumpers, the crackle of the bones of his prey in the coil of the anaconda—these are in the system, and our habits are like theirs. You have just dined, and, however scrupulously the slaughter-house is concealed in the graceful distance of miles, there is complicity—expensive races—race living at the expense of race. The planet is liable to shocks from comets, perturbations from planets, rendings from earthquake and volcano, alterations of climate, precessions of equinoxes. Rivers dry up by opening of the forest. The sea changes its bed. Towns and counties fall into it. At Lisbon, an earthquake killed men like flies. At Naples, three years ago, ten thousand persons were crushed in a few minutes. The scurvy at sea; the sword of the climate in the west of Africa, at Cayenne, at Panama, at New Orleans, cut off men like a massacre. Our western prairie shakes with fever and ague. The cholera, the small-pox, have proved as mortal to some tribes, as a frost to the crickets, which, having filled the summer with noise, are silenced by a fall of the temperature of one night. Without uncovering what does not concern us, or counting how many species of parasites hang on a bombyx; or groping after intestinal parasites, or infusory biters, or the obscurities of alternate generation;—the forms of the shark, the *labrus*, the jaw of the sea-wolf paved with crushing teeth, the weapons of the grampus, and other warriors hidden in the sea—are hints of ferocity in the interiors of nature. Let us not deny it up and down. Providence has a wild, rough, incalculable road to its end, and it is of no use to try to whitewash its huge, mixed instrumentalities, or to dress up that terrific benefactor in a clean shirt and white neckcloth of a student in divinity.

Will you say, the disasters which threaten mankind are

exceptional, and one need not lay his account for cataclysms every day? Ay, but what happens once, may happen again, and so long as these strokes are not to be parried by us, they must be feared.

But these shocks and ruins are less destructive to us, than the stealthy power of other laws which act on us daily. An expense of ends to means is fate;—organization tyrannizing over character. The menagerie, or forms and powers of the spine, is a book of fate: the bill of the bird, the skull of the snake, determines tyrannically its limits. So is the scale of races, of temperaments; so is sex; so is climate; so is the reaction of talents imprisoning the vital power in certain directions. Every spirit makes its house; but afterwards the house confines the spirit.

The gross lines are legible to the dull: the cabman is phrenologist so far: he looks in your face to see if his shilling is sure. A dome of brow denotes one thing; a pot-belly another; a squint, a pug-nose, mats of hair, the pigment of the epidermis, betray character. People seem sheathed in their tough organization. Ask Spurzheim, ask the doctors, ask Quetelet, if temperaments decide nothing? or if there be anything they do not decide? Read the description in medical books of the four temperaments, and you will think you are reading your own thoughts which you had not yet told. Find the part which black eyes, and which blue eyes, play severally in the company. How shall a man escape from his ancestors, or draw off from his veins the black drop which he drew from his father's or his mother's life? It often appears in a family, as if all the qualities of the progenitors were potted in several jars—some ruling quality in each son or daughter of the house—and sometimes the unmixed temperament, the rank unmitigated elixir, the family vice, is drawn off in a separate individual, and the others are proportionally relieved. We sometimes see a change of expression in our companion, and say, his father, or his mother, comes to the windows of his eyes, and sometimes a remote relative. In different hours, a man represents each of several of his ancestors, as if there were seven or eight of us rolled up in each man's skin—seven or eight ancestors at least—and they constitute the variety of notes for that new piece of music which his life is. At the corner of the street, you read the possibility of each passenger, in the facial angle, in the complexion, in the depth of his eye. His parentage determines it. Men are what their mothers made them. You may as well ask a loom which weaves huckaback, why it does not make cashmere, as expect poetry from this engineer or a chemical discovery from that jobber. Ask the digger in the ditch to explain Newton's laws: the fine organs

of his brain have been pinched by overwork and squalid poverty from father to son, for a hundred years. When each comes forth from his mother's womb, the gate of gifts closes behind him. Let him value his hands and feet, he has but one pair. So he has but one future, and that is already predetermined in his lobes, and described in that little fatty face, pig-eye, and squat form. All the privilege and all the legislation of the world cannot meddle or help to make a poet or a prince of him.

Jesus said, "When he looketh on her, he hath committed adultery." But he is an adulterer before he has yet looked on the woman, by the superfluity of animal, and the defect of thought, in his constitution. Who meets him, or who meets her, in the street, sees that they are ripe to be each other's victim.

In certain men, digestion and sex absorb the vital force, and the stronger these are, the individual is so much weaker. The more of these drones perish, the better for the hive. If, later, they give birth to some superior individual, with force enough to add to this animal a new aim, and a complete apparatus to work it out, all the ancestors are gladly forgotten. Most men and most women are merely one couple more. Now and then, one has a new cell or camarilla opened in his brain—an architectural, a musical, or a philological knack, some stray taste or talent for flowers, or chemistry, or pigments, or story-telling, a good hand for drawing, a good foot for dancing, an athletic frame for wide journeying, &c.—which skill nowise alters rank in the scale of nature, but serves to pass the time, the life of sensation going on as before. At last, these hints and tendencies are fixed in one, or in a succession. Each absorbs so much food and force, as to become itself a new centre. The new talent draws off so rapidly the vital force, that not enough remains for the animal functions, hardly enough for health; so that, in the second generation, if the like genius appear, the health is visibly deteriorated, and the generative force impaired.

People are born with the moral or with the material bias;—uterine brothers with this diverging destination: and I suppose with high magnifiers, Mr. Fraunhofer or Dr. Carpenter might come to distinguish in the embryo at the fourth day, this is a Whig, and that a Free-soiler.

It was a poetic attempt to lift this mountain of Fate, to reconcile this despotism of race with liberty, which led the Hindoos to say, "Fate is nothing but the deeds committed in a prior state of existence." I find the coincidence of the extremes of eastern and western speculation in the daring statement of Schelling, "there is in every man a certain feeling, that he has been what he is from all eternity, and by no means became such in time." To say it less sublimely—

in the history of the individual is always an account of his condition, and he knows himself to be a party to his present estate.

A good deal of our politics is physiological. Now and then, a man of wealth in the heyday of youth adopts the tenet of broadest freedom. In England, there is always some man of wealth and large connection planting himself, during all his years of health, on the side of progress, who, as soon as he begins to die, checks his forward play, calls in his troops, and becomes conservative. All conservatives are such from personal defects. They have been effeminated by position or nature, born halt and blind, through luxury of their parents, and can only, like invalids, act on the defensive. But strong natures, backwoodsmen, New Hampshire giants, Napoleons, Burkes, Broughams, Websters, Kossuths, are inevitable patriots, until their life ebbs, and their defects and gout, palsy and money, warp them.

The strongest idea incarnates itself in majorities and nations, in the healthiest and strongest. Probably, the election goes by avoirdupois weight, and, if you could weigh bodily the tonnage of any hundred of the Whig and the Democratic party in a town, on the Dearborn balance, as they passed the hay-scales, you could predict with certainty which party would carry it. On the whole, it would be rather the speediest way of deciding the vote, to put the selectmen or the mayor and aldermen at the hay-scales.

In science, we have to consider two things: power and circumstance. All we know of the egg, from each successive discovery, is, *another vesicle*; and if, after five hundred years, you get a better observer, or a better glass, he finds within the last observed another. In vegetable and animal tissue, it is just alike, and all that the primary power or spasm operates, is, still, vesicles, vesicles. Yes—but the tyrannical Circumstance! A vesicle in new circumstances, a vesicle lodged in darkness, Oken thought, became animal; in light, a plant. Lodged in the parent animal, it suffers changes, which end in unsheathing miraculous capability in the unaltered vesicle, and it unlocks itself to fish, bird, or quadruped, head and foot, eye and claw. The Circumstance is Nature. Nature is, what you may do. There is much you may not. We have two things—the circumstance, and the life. Once we thought, positive power was all. Now we learn, that negative power, or circumstance, is half. Nature is the tyrannous circumstance, the thick skull, the sheathed snake, the ponderous, rock-like jaw; necessitated activity; violent direction; the conditions of a tool, like the locomotive, strong enough on its track, but which can do nothing but mischief off of it; or skates, which are wings on the ice, but fetters on the ground.

The book of Nature is the book of Fate. She turns the gigantic pages—leaf after leaf—never re-turning one. One leaf she lays down, a floor of granite; then a thousand ages, and a bed of slate; a thousand ages, and a measure of coal; a thousand ages, and a layer of marl and mud: vegetable forms appear; her first misshapen animals, zoophyte, trilobium, fish, then, saurians—rude forms, in which she has only blocked her future statue, concealing under these unwieldy monsters the fine type of her coming king. The face of the planet cools and dries, the races meliorate, and man is born. But when a race has lived its term, it comes no more again.

The population of the world is a conditional population; not the best, but the best that could live now; and the scale of tribes, and the steadiness with which victory adheres to one tribe, and defeat to another, is as uniform as the superposition of strata. We know in history what weight belongs to race. We see the English, French, and Germans, planting themselves on every shore and market of America and Australia, and monopolizing the commerce of these countries. We like the nervous and victorious habit of our own branch of the family. We follow the step of the Jew, of the Indian, of the Negro. We see how much will has been expended to extinguish the Jew, in vain. Look at the unpalatable conclusions of Knox, in his "Fragment of Races,"—a rash and unsatisfactory writer, but charged with pungent and unforgettable truths. "Nature respects race, and not hybrids." "Every race has its own *habitat*." "Detach a colony from the race, and it deteriorates to the crab." See the shades of the picture. The German and Irish millions, like the Negro, have a great deal of guano in their destiny. They are ferried over the Atlantic, and carted over America, to ditch and to drudge, to make corn cheap, and then to lie down prematurely to make a spot of green grass on the prairie.

One more fagot of these adamantine bandages, is, the new science of Statistics. It is a rule, that the most casual and extraordinary events—if the basis of population is broad enough—become matter of fixed calculation. It would not be safe to say when a captain like Bonaparte, a singer like Jenny Lind, or a navigator like Bowditch, would be born in Boston: but, on a population of twenty or two hundred millions, something like accuracy may be had.*

* 'Tis frivolous to fix pedantically the date of particular inven-

* "Everything which pertains to the human species, considered as a whole, belongs to the order of physical facts. The greater the number of individuals, the more does the influence of the individual will disappear, leaving predominance to a series of general facts dependent on causes by which society exists, and is preserved."—QUETELET.

tions. They have all been invented over and over fifty times. Man is the arch machine, of which all these shifts drawn from himself are toy models. He helps himself on each emergency by copying or duplicating his own structure, just so far as the need is. 'Tis hard to find the right Homer, Zoroaster, or Menu; harder still to find the Tubal Cain, or Vulcan, or Cadmus, or Copernicus, or Fust, or Fulton, the indisputable inventor. There are scores and centuries of them. "The air is full of men." This kind of talent so abounds, this constructive tool-making efficiency, as if it adhered to the chemists, as if the air he breathes were made of Vaucansons, Franklins, and Watts.

Doubtless, in every million there will be an astronomer, a mathematician, a comic poet, a mystic. No one can read the history of astronomy, without perceiving that Copernicus, Newton, Laplace, are not new men, or a new kind of men, but that Thales, Anaximenes, Hipparchus, Empedocles, Aristarchus, Pythagoras, Ctenopides, had anticipated them; each had the same tense geometrical brain, apt for the same vigorous computation and logic, a mind parallel to the movement of the world. The Roman mile probably rested on a measure of a degree of the meridian. Mahometan and Chinese know what we know of leap-year, of the Gregorian calendar, and of the precession of the equinoxes. As, in every barrel of covies, brought to New Bedford, there shall be one *orangia*, so there will, in a dozen millions of Malays and Mahometans, be one or two astronomical skulls. In a large city, the most casual things, and things whose beauty lies in their casualty, are produced as punctually and to order as the baker's muffin for breakfast. Punch makes exactly one capital joke a week; and the journals contrive to furnish one good piece of news every day.

And not less work the laws of repression, the penalties of violated functions. Famine, typhus, frost, war, suicide, and effete races, must be reckoned calculable parts of the system of the world.

These are pebbles from the mountain, hints of the terms by which our life is walled up, and which show a kind of mechanical exactness, as of a loom or mill, in what we call casual or fortuitous events.

The force with which we resist these torrents of tendency looks so ridiculously inadequate, that it amounts to little more than a criticism or a protest made by a minority of one, under compulsion of millions. I seemed, in the height of a tempest, to see men overboard struggling in the waves, and driven about here and there. They glanced intelligently at each other, but 'twas little they could do for one another; 'twas much if

each could keep afloat alone. Well, they had a right to their eye-beams, and all the rest was Fate.

We cannot trifle with this reality, this cropping out in our planted gardens of the core of the world. No picture of life can have any veracity that does not admit the odious facts. A man's power is hooped in by a necessity, which, by many experiments, he touches on every side, until he learns its arc.

The element running through entire nature, which we popularly call Fate, is known to us as limitation. Whatever limits us, we call Fate. If we are brute and barbarous, the fate takes a brute and dreadful shape. As we refine, our checks become finer. If we rise to spiritual culture, the antagonism takes a spiritual form. In the Hindoo fables, Vishnu follows Maya through all her ascending changes, from insect and crawfish up to elephant; whatever form she took, he took the male form of that kind, until she became at last woman and goddess, and he a man and a god. The limitations refine as the soul purifies, but the ring of necessity is always perched at the top.

When the gods in the Norse heaven were unable to bind the Fenris Wolf with steel or with weight of mountains—the one he snapped and the other he spurned with his heel—they put round his foot a limp band softer than silk or cobweb, and this held him: the more he spurned it, the stiffer it drew. So soft and so stanch is the ring of Fate. Neither brandy, nor nectar, nor sulphuric ether, nor hell-fire, nor ichor, nor poetry, nor genius, can get rid of this limp band. For if we give it the high sense in which the poets use it, even thought itself is not above Fate: that too must act according to eternal laws, and all that is wilful and fantastic in it is in opposition to its fundamental essence.

And, last of all, high over thought, in the world of morals, Fate appears as vindicator, levelling the high, lifting the low, requiring justice in man, and always striking soon or late, when justice is not done. What is useful will last; what is hurtful will sink. "The doer must suffer," said the Greeks: "you would soothe a Deity not to be soothed." "God himself cannot procure good for the wicked," said the Welsh triad. "God may consent, but only for a time," said the bard of Spain. The limitation is impassable by any insight of man. In its last and loftiest ascensions, insight itself, and the freedom of the will, is one of its obedient members. But we must not run into generalizations too large, but show the natural bounds or essential distinctions, and seek to do justice to the other elements as well.

Thus we trace Fate, in matter, mind, and morals—in race,

in retardations of strata, and in thought and character as well. It is everywhere bound or limitation. But fate has its lord; limitation its limits; is different seen from above and from below; from within and from without. For, though Fate is immense, so is power, which is the other fact in the dual world, immense. If Fate follows and limits power, power attends and antagonizes Fate. We must respect Fate as natural history, but there is more than natural history. For who and what is this criticism that pries into the matter? Man is not order of nature, sack and sack, belly and members, link in a chain, nor any ignominious baggage, but a stupendous antagonism, a dragging together of the poles of the Universe. He betrays his relation to what is below him—thick-skulled, small-brained, fishy, quadrumanous—quadruped ill-disguised, hardly escaped into biped, and has paid for the new powers by loss of some of the old ones. But the lightning which explodes and fashions planets, maker of planets and suns, is in him. On one side, elemental order, sandstone and granite, rock- ledges, peat-bog, forest, sea and shore; and, on the other part, thought, the spirit which composes and decomposes nature—here they are, side by side, god and devil, mind and matter, king and conspirator, belt and spasm, riding peacefully together in the eye and brain of every man.

Nor can he blink the freewill. To hazard the contradiction—freedom is necessary. If you please to plant yourself on the side of Fate, and say, Fate is all; then we say, a part of Fate is the freedom of man. For ever wells up the impulse of choosing and acting in the soul. Intellect annuls Fate. So far as a man thinks, he is free. And though nothing is more disgusting than the crowing about liberty by slaves, as most men are, and the flippant mistaking for freedom of some paper preamble like a "Declaration of Independence," or the statute right to vote, by those who have never dared to think or to act, yet it is wholesome to man to look not at Fate, but the other way: the practical view is the other. His sound relation to these facts is to use and command, not to cringe to them. "Look not on nature, for her name is fatal," said the oracle. The too much contemplation of these limits induces meanness. They who talk much of destiny, their birth-star, &c., are in a lower dangerous plane, and invite the evils they fear.

I cited the instinctive and heroic races as proud believers in Destiny. They conspire with it; a loving resignation is with the event. But the dogma makes a different impression, when it is held by the weak and lazy. 'Tis weak and vicious people who cast the blame on Fate. The right use of Fate is to bring up our conduct to the loftiness of nature. Rude and invincible except by themselves are the elements. So let man be. Let

him empty his breast of his windy conceits, and show his lordship by manners and deeds on the scale of nature. Let him hold his purpose as with the tug of gravitation. No power, no persuasion, no bribe shall make him give up his point. A man ought to compare advantageously with a river, an oak, or a mountain. He shall have not less the flow, the expansion, and the resistance of these.

'Tis the best use of Fate to teach a fatal courage. Go face the fire at sea, or the cholera in your friend's house, or the burglar in your own, or what danger lies in the way of duty, knowing you are guarded by the cherubim of Destiny. If you believe in Fate to your harm, believe it, at least, for your good.

For, if Fate is so prevailing, man also is part of it, and can confront fate with fate. If the Universe have these savage accidents, our atoms are as savage in resistance. We should be crushed by the atmosphere, but for the reaction of the air within the body. A tube made of a film of glass can resist the shock of the ocean, if filled with the same water. If there be omnipotence in the stroke, there is omnipotence of recoil.

1. But Fate against Fate is only parrying and defence: there are, also, the noble creative forces. The revelation of Thought takes man out of servitude into freedom. We rightly say of ourselves, we were born, and afterward we were born again, and many times. We have successive experiences so important, that the new forgets the old, and hence the mythology of the seven or the nine heavens. The day of days, the great day of the feast of life, is that in which the inward eye opens to the Unity in things, to the omnipresence of law;—sees that what is must be, and ought to be, or is the best. This beatitude dips from on high down on us, and we see. It is not in us so much as we are in it. If the air come to our lungs, we breathe and live; if not, we die. If the light come to our eyes, we see; else not. And if truth come to our mind, we suddenly expand to its dimensions, as if we grew to worlds. We are as lawgivers; we speak for Nature; we prophesy and divine.

This insight throws us on the party and interest of the Universe, against all and sundry; against ourselves, as much as others. A man speaking from insight affirms of himself what is true of the mind: seeing its immortality, he says I am immortal; seeing its invincibility, he says, I am strong. It is not in us, but we are in it. It is of the maker, not of what is made. All things are touched and changed by it. This uses, and is not used. It distances those who share it, from those who share it not. Those who share it not are flocks and herds. It dates from itself; not from former men or better men—gospel, or constitution, or college, or custom.

Where it shines, Nature is no longer intrusive, but all things make a musical or pictorial impression. The world of men show like a comedy without laughter:—populations, interests, government, history;—'tis all toy figures in a toy house. It does not overvalue particular truths. We hear eagerly every thought and word quoted from an intellectual man. But, in his presence, our own mind is roused to activity, and we forget very fast what he says, much more interested in the new play of our own thought, than in any thought of his. 'Tis the majesty into which we have suddenly mounted, the impersonality, the scorn of egotisms, the sphere of laws, that engage us. Once we were stepping a little this way, and a little that way; now, we are as men in a balloon, and do not think so much of the point we have left, or the point we would make, as of the liberty and glory of the way.

Just as much intellect as you add, so much organic power. He who sees through the design, presides over it, and must will that which must be. We sit and rule, and, though we sleep, our dream will come to pass. Our thought, though it were only an hour old, affirms an oldest necessity, not to be separated from thought, and not to be separated from will. They must always have co-existed. It apprises us of its sovereignty and godhead, which refuse to be severed from it. It is not mine or thine, but the will of all mind. It is poured into the souls of all men, as the soul itself which constitutes them men. I know not whether there be, as is alleged, in the upper region of our atmosphere, a permanent westerly current, which carries with it all atoms which rise to that height, but I see, that when souls reach a certain clearness of perception, they accept a knowledge and motive above selfishness. A breath of will blows eternally through the universe of souls in the direction of the Right and Necessary. It is the air which all intellects inhale and exhale, and it is the wind which blows the worlds into order and orbit.

Thought dissolves the material universe, by carrying the mind up into a sphere where all is plastic. Of two men, each obeying his own thought, he whose thought is deepest will be the strongest character. Always one man more than another represents the will of Divine Providence to the period.

2. If thought makes free, so does the moral sentiment. The mixtures of spiritual chemistry refuse to be analyzed. Yet we can see that with the perception of truth is joined the desire that it shall prevail. That affection is essential to will. Moreover, when a strong will appears, it usually results from a certain unity of organization, as if the whole energy of body and mind flowed in one direction. All great force is real and elemental. There is no manufacturing a strong will. There

must be a pound to balance a pound. Where power is shown in will, it must rest on the universal force. Alaric and Bonaparte must believe they rest on a truth, or their will can be bought or bent. There is a bribe possible for any finite will. But the pure sympathy with universal ends is an infinite force, and cannot be bribed or bent. Whoever has had experience of the moral sentiment cannot choose but believe in unlimited power. Each pulse from that heart is an oath from the Most High. I know not what the word *sublime* means, if it be not the intimations in this infant of a terrific force. A text of heroism, a name and anecdote of courage, are not arguments, but sallies of freedom. One of these is the verse of the Persian Hafiz, "Tis written on the gate of Heaven, 'Woe unto him who suffers himself to be betrayed by Fate!'" Does the reading of history make us fatalists? What courage does not the opposite opinion show! A little whim of will to be free gallantly contending against the universe of chemistry.

But insight is not will, nor is affection will. Perception is cold, and goodness dies in wishes; as Voltaire said, 'tis the misfortune of worthy people that they are cowards; "*un des plus grands malheurs des honnêtes gens c'est qu'ils sont des lâches.*" There must be a fusion of these two to generate the energy of will. There can be no driving force, except through the conversion of the man into his will, making him the will, and the will him. And one may say boldly, that no man has a right perception of any truth, who has not been reacted on by it, so as to be ready to be its martyr.

The one serious and formidable thing in nature is a will. Society is servile from want of will, and therefore the world wants saviours and religions. One way is right to go: the hero sees it, and moves on that aim, and has the world under him for root and support. He is to others as the world. His approbation is honour; his dissent, infamy. The glance of his eye has the force of sunbeams. A personal influence towers up in memory only worthy, and we gladly forget numbers, money, climate, gravitation, and the rest of Fate.

We can afford to allow the limitation, if we know it is the meter of the growing man. We stand against Fate, as children stand up against the wall in their father's house, and notch their height from year to year. But when the boy grows to man, and is master of the house, he pulls down that wall, and builds a new and bigger. 'Tis only a question of time. Every brave youth is in training to ride, and rule this dragon. His science is to make weapons and wings of these passions and retarding forces. Now whether, seeing these two things, fate and power, we are permitted to believe in unity?

The bulk of mankind believe in two gods. They are under one dominion here in the house, as friend and parent, in social circles, in letters, in art, in love, in religion: but in mechanics, in dealing with steam and climate, in trade, in politics, they think they come under another; and that it would be a practical blunder to transfer the method and way of working of one sphere into the other. What good, honest, generous men at home, will be wolves and foxes on change! What pious men in the parlour will vote for what reprobates at the polls! To a certain point, they believe themselves the care of a Providence. But in a steamboat, in an epidemic, in war, they believe a malignant energy rules.

But relation and connection are not somewhere and sometimes, but everywhere and always. The divine order does not stop where their sight stops. The friendly power works on the same rules, in the next farm and the next planet. But where they have not experience, they run against it, and hurt themselves. Fate, then, is a name for facts not yet passed under the fire of thought—for causes which are unpenetrated.

But every jet of chaos which threatens to exterminate us, is convertible by intellect into wholesome force. Fate is unpenetrated causes. The water drowns ship and sailor, like a grain of dust. But learn to swim, trim your bark, and the wave which drowned it will be cloven by it, and carry it, like its own foam, a plume and a power. The cold is inconsiderate of persons, tingles your blood, freezes a man like a dew-drop. But learn to skate, and the ice will give you a graceful, sweet, and poetic motion. The cold will brace your limbs and brain to genius, and make you foremost men of time. Cold and sea will train an imperial Saxon race, which nature cannot bear to lose, and, after cooping it up for a thousand years in yonder England, gives a hundred Englands, a hundred Mexicos. All the bloods it shall absorb and domineer: and more than Mexicos—the secrets of water and steam, the spasms of electricity, the ductility of metals, the chariot of the air, the ruddered balloon, are awaiting you.

The annual slaughter from typhus far exceeds that of war; but right drainage destroys typhus. The plague in the sea-service from scurvy is healed by lemon juice and other diets portable or procurable; the depopulation by cholera and small-pox is ended by drainage and vaccination; and every other pest is not less in the chain of cause and effect, and may be fought off. And, whilst art draws out the venom, it commonly extorts some benefit from the vanquished enemy. The mischievous torrent is taught to drudge for man: the wild beasts are made useful for food, or dress, or labour; the chemie explosions are controlled like his watch. These are now the

steeds on which he rides. Man moves in all modes, by legs of horses, by wings of wind, by steam, by gas of balloon, by electricity, and stands on tiptoe threatening to hunt the eagle in his own element. There is nothing he will not make his carrier.

Steam was, till the other day, the devil which we dreaded. Every pot made by any human potter or brazier had a hole in its cover, to let off the enemy, lest he should lift pot and roof, and carry the house away. But the Marquis of Worcester, Watt, and Fulton bethought themselves that, where was power was not devil, but was God; that it must be availed of, and not by any means let off and wasted. Could he lift pots and roofs and houses so handily? he was the workman they were in search of. He could be used to lift away, chain, and compel other devils, far more reluctant and dangerous, namely, cubic miles of earth, mountains, weight or resistance of water, machinery, and the labours of all men in the world; and time he shall lengthen, and shorten space.

It has, not fared much otherwise with higher kinds of steam. The opinion of the million was the terror of the world, and it was attempted, either to dissipate it, by amusing nations, or to pile it over with strata of society—a layer of soldiers; over that, a layer of lords; and a king on the top; with clamps and hoops of castles, garrisons, and police. But, sometimes, the religious principle would get in, and burst the hoops, and rive every mountain laid on top of it. The Fultons and Watts of politics, believing in unity, saw that it was a power, and, by satisfying it (as justice satisfies everybody), through a different disposition of society—grouping it on a level, instead of piling it into a mountain—they have contrived to make of this terror the most harmless and energetic form of a State.

Very odious, I confess, are the lessons of Fate. Who likes to have a dapper phrenologist pronouncing on his fortunes? Who likes to believe that he has hidden in his skull, spine, and pelvis, all the vices of a Saxon or Celtic race, which will be sure to pull him down—with what grandeur of hope and resolve he is fired—into a selfish, huckstering, servile, dodging animal? A learned physician tells us, the fact is invariable with the Neapolitan that, when mature, he assumes the forms of the unmistakable scoundrel. That is a little overstated—but may pass.

But these are magazines and arsenals. A man must thank his defects, and stand in some terror of his talents. A transcendent talent draws so largely on his forces, as to lame him; a defect pays him revenues on the other side. The sufferance, which is the badge of the Jew, has made him, in these days,

the ruler of the rulers of the earth. If Fate is ore and quarry, if evil is good in the making, if limitation is power that shall be, if calamities, oppositions, and weights are wings and means—we are reconciled.

Fate involves the melioration. No statement of the universe can have any soundness, which does not admit its ascending effort. The direction of the whole, and of the parts, is toward benefit, and in proportion to the health. Behind every individual closes organization: before him opens liberty—the better, the best. The first and worst races are dead. The second and imperfect races are dying out, or remain for the maturing of higher. In the latest race, in man, every generosity, every new perception, the love and praise he extorts from his fellows, are certificates of advance out of fate into freedom. Liberation of the will from the sheaths and clogs of organization which he has outgrown, is the end and aim of this world. Every calamity is a spur and valuable hint; and where his endeavours do not yet fully avail, they tell as tendency. The whole circle of animal life—tooth against tooth—devouring war, war for food, a yelp of pain and a grunt of triumph, until, at last, the whole menagerie, the whole chemical mass, is mellowed and refined for higher use—pleases at a sufficient perspective.

But to see how fate slides into freedom, and freedom into fate, observe how far the roots of every creature run, or find, if you can, a point where there is no thread of connection. Our life is consentaneous and far-related. This knot of nature is so well tied, that nobody was ever cunning enough to find the two ends. Nature is intricate, overlapped, interweaved, and endless. Christopher Wren said of the beautiful King's College chapel, "that, if anybody would tell him where to lay the first stone, he would build such another." But where shall we find the first atom in this house of man, which is all consent, inoculation, and balance of parts?

The web of relation is shown in *habitat*, shown in hybernation. When hybernation was observed, it was found, that, whilst some animals become torpid in winter, others were torpid in summer: hybernation then was a false name. The *long sleep* is not an effect of cold, but is regulated by the supply of food proper to the animal. It becomes torpid when the fruit or prey it lives on is not in season, and regains its activity when its food is ready.

Eyes are found in light; ears in auricular air; feet on land; fins in water; wings in air; and each creature where it was meant to be, with a mutual fitness. Every zone has its own *Fauna*. There is adjustment between the animal and its food, its parasite, its enemy. Balances are kept. It is not allowed

to diminish in numbers, nor to exceed. The like adjustments exist for man. His food is cooked when he arrives; his coal in the pit; the house ventilated; the mud of the deluge dried; his companions arrived at the same hour, and awaiting him with love, concert, laughter, and tears. These are coarse adjustments, but the invisible are not less. There are more belongings to every creature than his air and his food. His instincts must be met, and he has predisposing power that bends and fits what is near him to his use. He is not possible until the invisible things are right for him, as well as the visible. Of what changes, then, in sky and earth, and in finer skies and earths, does the appearance of some Dante or Columbus apprise us!

How is this effected? Nature is no spendthrift, but takes the shortest way to her ends. As the general says to his soldiers, "If you want a fort, build a fort," so nature makes every creature do its own work and get its living,—is it planet, animal, or tree. The planet makes itself. The animal cell makes itself;—then, what it wants. Every creature,—wren or dragon,—shall make its own lair. As soon as there is life, there is self-direction, and absorbing and using of material. Life is freedom,—life in the direct ratio of its amount. You may be sure, the new-born man is not inert. Life works both voluntarily and supernaturally in its neighbourhood. Do you suppose he can be estimated by his weight in pounds, or that he is contained in his skin,—this reaching, radiating, jaculating fellow? The smallest candle fills a mile with its rays, and the papillæ of a man run out to every star.

When there is something to be done the world knows how to get it done. The vegetable eye makes leaf, pericarp, root, bark, or thorn, as the need is; the first cell converts itself into stomach, mouth, nose, or nail, according to the want; the world throws its life into a hero or a shepherd; and puts him where he is wanted. Dante and Columbus were Italians in their time: they would be Russians or Americans to-day. Things ripen, new men come. The adaptation is not capricious. The ulterior aim, the purpose beyond itself, the correlation by which planets subside and crystallize, then animate beasts and men, will not stop, but will work into finer particulars, and from finer to finest.

The secret of the world is, the tie between person and event. Person makes event and event person. The "times," "the age," what is that, but a few profound persons and a few active persons who epitomize the times?—Goethe, Hegel, Metternich, Adams, Calhoun, Guizot, Peel, Cobden, Kossuth, Rothschild, Astor, Brunel, and the rest. The same fitness must be presumed between a man and the time and event, as

between the sexes, or between a race of animals and the food it eats, or the inferior races it uses. He thinks his fate alien, because the copula is hidden. But the soul contains the event that shall befall it, for the event is only the actualization of its thoughts; and what we pray to ourselves for is always granted. The event is the print of your form. It fits you like your skin. What each does is proper to him. Events are the children of his body and mind. We learn that the soul of Fate is the soul of us, as Hafiz sings—

“Alas! till now I had not known,
My guide and fortune’s guide are one.”

All the toys that infatuate men, and which they play for,—houses, land, money, luxury, power, fame,—are the selfsame thing, with a new gauze or two of illusion overlaid. And of all the drums and rattles by which men are made willing to have their heads broke, and are led out solemnly every morning to parade,—the most admirable is this by which we are brought to believe that events are arbitrary, and independent of actions. At the conjuror’s we detect the hair by which he moves his puppet, but we have not eyes sharp enough to descry the thread that ties cause and effect.

Nature magically suits the man to his fortunes, by making these the fruit of his character. Ducks take to the water, eagles to the sky, waders to the sea margin, hunters to the forest, clerks to counting-rooms, soldiers to the frontier. Thus events grow on the same stem with persons; are sub-persons. The pleasure of life is according to the man that lives it, and not according to the work or the place. Life is an ecstasy. We know what madness belongs to love,—what power to paint a vile object in hues of heaven. As insane persons are indifferent to their dress, diet, and other accommodations, and, as we do in dreams, with equanimity, the most absurd acts, so, a drop more of wine in our cup of life will reconcile us to strange company and work. Each creature puts forth from itself its own condition and sphere, as the slug sweats out its slimy house on the pear-leaf, and the woolly aphides on the apple perspire their own bed, and the fish its shell. In youth, we clothe ourselves with rainbows, and go as brave as the zodiac. In age, we put out another sort of perspiration,—gout, fever, rheumatism, caprice, doubt, fretting, and avarice.

A man’s fortunes are the fruit of his character. A man’s friends are his magnetisms. We go to Herodotus and Plutarch for examples of Fate; but we are examples. “*Quisque suos patimur manes.*” The tendency of every man to enact all that is in his constitution is expressed in the old belief, that, the efforts which we make to escape from our destiny only serve to lead us into it: and I have noticed, a man likes better to be

complimented on his position, as the proof of the last or total excellence, than on his merits.

A man will see his character emitted in the events that seem to meet, but which exude from and accompany him. Events expand with the character. As once he found himself among toys, so now he plays a part in colossal systems, and his growth is declared in his ambition, his companions, and his performance. He looks like a piece of luck, but is a piece of causation;—the mosaic, angulated and ground to fit into the gap he fills. Hence in each town there is some man who is, in his brain and performance, an explanation of the tillage, production, factories, banks, churches, ways of living, and society, of that town. If you do not chance to meet him, all that you see will leave you a little puzzled: if you see him, it will become plain. We know in Massachusetts who built New Bedford, who built Lynn, Lowell, Lawrence, Clinton, Fitchburg, Holyoke, Portland, and many another noisy mart. Each of these men, if they were transparent, would seem to you not so much men, as walking cities, and, wherever you put them, they would build one.

History is the action and reaction of these two,—Nature and Thought;—two boys pushing each other on the curbstone of the pavement. Everything is pusher or pushed: and matter and mind are in perpetual tilt and balance so. Whilst the man is weak, the earth takes up him. He plants his brain and affections. By-and-by he will take up the earth, and have his gardens and vineyards in the beautiful order and productiveness of his thought. Every solid in the universe is ready to become fluid on the approach of the mind, and the power to flux it is the measure of the mind. If the wall remain adamant, it accuses the want of thought. To a subtler force, it will stream into new forms, expressive of the character of the mind. What is the city in which we sit here, but an aggregate of incongruous materials, which have obeyed the will of some man? The granite was reluctant, but his hands were stronger, and it came. Iron was deep in the ground, and well combined with stone, but could not hide from his fires. Wood, lime, stuffs, fruits, gums, were dispersed over the earth and sea, in vain. Here they are, within reach of every man's day-labour,—what he wants of them. The whole world is the flux of matter over the wires of thought to the poles or points where it would build. The races of men rise out of the ground pre-occupied with a thought which rules them, and divided into parties ready armed and angry to fight for this metaphysical abstraction. The quality of the thought differences the Egyptian and the Roman, the Austrian and the American. The men who come on the stage at one period are all found to be

related to each other. Certain ideas are in the air. We are all impressionable, for we are made of them; all impressionable, but some more than others, and these first express them. This explains the curious contemporaneousness of inventions and discoveries. The truth is in the air, and the most impressionable brain will announce it first, but all will announce it a few minutes later. So women, as most susceptible, are the best index of the coming hour. So the great man, that is, the man most imbued with the spirit of the time, is the impressionable man,—of a fibre irritable and delicate, like iodine to light. He feels the infinitesimal attractions. His mind is righter than others, because he yields to a current so feeble as can be felt only by a needle delicately poised.

The correlation is shown in defects. Möller, in his "Essay on Architecture," taught that the building which was fitted accurately to answer its end, would turn out to be beautiful, though beauty had not been intended. I find the like unity in human structures rather virulent and pervasive; that a crudity in the blood will appear in the argument; a hump in the shoulder will appear in the speech and handiwork. If his mind could be seen, the hump would be seen. If a man has a seesaw in his voice, it will run into his sentences, into his poem, into the structure of his fable, into his speculation, into his charity. And, as every man is hunted by his own demon, vexed by his own disease, this checks all his activity.

So each man, like each plant, has his parasites. A strong, astringent, bilious nature, has more truculent enemies than the slugs and moths that fret my leaves. Such an one has curculios, borers, knife-worms: a swindler ate him first, then a client, then a quack, then a smooth, plausible gentleman, bitter and selfish as Moloch.

This correlation really existing can be divined. If the threads are there, thought can follow and show them. Especially when a soul is quick and docile; as Chaucer sings—

"Or if the soul of proper kind
Be so perfect as men find,
That it wot what is to come,
And that he warneth all and some,
Of every of their adventures,
By previsions or figures;
But that our flesh hath not might
It to understand aright,
For it is warned too darkly."

Some people are made up of rhyme, coincidence, omen, periodicity, and presage: they meet the person they seek: what their companion prepares to say to them, they first say to him; and a hundred signs apprise them of what is about to befall.

that what we seek we shall find; what we flee from flees from us; as Goethe said, "what we wish for in youth, comes in heaps on us in old age," too often cursed with the granting of our prayer: and hence the high caution, that, since we are sure of having what we wish, we beware to ask only for high things.

One key, one solution to the mysteries of human condition, one solution to the old knots of fate, freedom, and foreknowledge, exists, the propounding, namely, of the double consciousness. A man must ride alternately on the horses of his private and his public nature, as the equestrians in the circus throw themselves nimbly from horse to horse, or plant one foot on the back of one, and the other foot on the back of the other. So when a man is the victim of his fate, has sciatica in his loins, and cramp in his mind; a club-foot and a club in his wit; a sour face, and a selfish temper; a strut in his gait, and a conceit in his affection; or is ground to powder by the vice of his race; he is to rally on his relation to the universe which his ruin benefits. Leaving the daemon who suffers, he is to take sides with the Deity who secures universal benefit by his pain.

To offset the drag of temperament and race, which pulls down, learn this lesson—namely, that by the cunning co-presence of two elements, which is throughout nature, whatever lames or paralyzes you, draws in with it the divinity, in some form, to repay. A good intention clothes itself with sudden power. When a god wishes to ride, any chip or pebble will bud and shoot out winged feet, and serve him for a horse.

Let us build altars to the Blessed Unity which holds nature and souls in perfect solution, and compels every atom to serve an universal end. I do not wonder at a snow-flake, a shell, a summer landscape, or the glory of the stars; but at the necessity of beauty under which the universe lies; that all is and must be pictorial; that the rainbow, and the curve of the horizon, and the arch of the blue vault, are only results from the organism of the eye. There is no need for foolish amateurs to fetch me to admire a garden of flowers, or a sun-gilt cloud, or a waterfall, when I cannot look without seeing splendour and grace. How idle to choose a random sparkle here or there, when the indwelling necessity plants the rose of beauty on the brow of chaos, and discloses the central intention of nature to be harmony and joy.

Let us build altars to the Beautiful Necessity. If we thought men were free in the sense that in a single exception one fantastical will could prevail over the law of things, it were all one as if a child's hand could pull down the sun. If, in the least particular, one could derange the order of nature,—who would accept the gift of life?

Let us build altars to the Beautiful Necessity, which secures that all is made of one piece; that plaintiff and defendant, friend and enemy, animal and planet, food and eater, are of one kind. In astronomy is vast space, but no foreign system; in geology, vast time, but the same laws as to-day. Why should we be afraid of nature, which is no other than "philosophy and theology embodied"? Why should we fear to be crushed by savage elements, we who are made up of the same elements? Let us build to the Beautiful Necessity, which makes man brave in believing that he cannot shun a danger that is appointed, nor incur one that is not; to the Necessity which rudely or softly educates him to the perception that there are no contingencies; that Law rules throughout existence, a Law which is not intelligent but intelligence,—not personal nor impersonal,—it disdains words and passes understanding; it dissolves persons; it vivifies nature; yet solicits the pure in heart to draw on all its omnipotence.

II.—POWER.

His tongue was framed to music.
And his hand was armed with skill;
His face was the mould of beauty,
And his heart the throne of will.

THERE is not yet any inventory of a man's faculties, any more than a bible of his opinions. Who shall set a limit to the influence of a human being? There are men, who, by their sympathetic attractions, carry nations with them, and lead the activity of the human race. And if there be such a tie, that wherever the mind of man goes, nature will accompany him, perhaps there are men whose magnetisms are of that force to draw material and elemental powers, and, where they appear, immense instrumentalities organize around them. Life is a search after power; and this is an element with which the world is so saturated,—there is no chink or crevice in which it is not lodged,—that no honest seeking goes unrewarded. A man should prize events and possessions as the ore in which this fine mineral is found; and he can well afford to let events and possessions and the breath of the body go,

if their value has been added to him in the shape of power. If he have secured the elixir, he can spare the wide gardens from which it was distilled. A cultivated man, wise to know and bold to perform, is the end to which nature works, and the education of the will is the flowering and result of all this geology and astronomy.

All successful men have agreed in one thing,—they were *causationists*. They believed that things went not by luck, but by law; that there was not a weak or a cracked link in the chain that joins the first and last of things. A belief in causality, or strict connexion between every trifle and the principle of being, and, in consequence, belief in compensation, or, that nothing is got for nothing,—characterizes all valuable minds, and must control every effort that is made by an industrious one. The most valiant men are the best believers in the tension of the laws. "All the great captains," said Bonaparte, "have performed vast achievements by conforming with the rules of the art,—by adjusting efforts to obstacles."

The key to the age may be this, or that, or the other, as the young orators describe;—the key to all ages is—Imbecility; imbecility in the vast majority of men, at all times, and, even in heroes, in all but certain eminent moments; victims of gravity, custom, and fear. This gives force to the strong,—that the multitude have no habit of self-reliance or original action.

We must reckon success a constitutional trait. Courage,—the old physicians taught (and their meaning holds, if their physiology is a little mythical),—courage, or the degree of life, is as the degree of circulation of the blood in the arteries. "During passion, anger, fury, trials of strength, wrestling, fighting, a large amount of blood is collected in the arteries, the maintenance of bodily strength requiring it, and but little is sent into the veins. This condition is constant with intrepid persons." Where the arteries hold their blood, is courage and adventure possible. Where they pour it unrestrained into the veins, the spirit is low and feeble. For performance of great mark, it needs extraordinary health. If Eric is in robust health, and has slept well, and is at the top of his condition, and thirty years old, at his departure from Greenland, he will steer west, and his ships will reach Newfoundland. But take out Eric, and put in a stronger and bolder man,—Bjorn or Thorfin,—and the ships will, with just as much ease, sail six hundred, one thousand, fifteen hundred miles further, and reach Labrador and New England. There is no chance in results. With adults, as with children, one class enters cordially into the game, and whirl with the whirling world; the others have cold hands, and remain bystanders; or are

only dragged in by the humour and vivacity of those who can carry a dead weight. The first wealth is health. Sickness is poor-spirited, and cannot serve any one: it must husband its resources to live. But health or fulness answers its own ends, and has to spare, runs over and inundates the neighbourhoods and creeks of other men's necessities.

All power is of one kind, a sharing of the nature of the world. The mind that is parallel with the laws of nature will be in the current of events, and strong with their strength. One man is made of the same stuff of which events are made; is in sympathy with the course of things; can predict it. Whatever befalls, befalls him first; so that he is equal to whatever shall happen. A man who knows men, can talk well on politics, trade, law, war, religion. For, everywhere, men are led in the same manners.

The advantage of a strong pulse is not to be supplied by any labour, art, or concert. It is like the climate, which easily rears a crop, which no glass, or irrigation, or tillage, or manures, can elsewhere rival. It is like the opportunity of a city like New York, or Constantinople, which needs no diplomacy to force capital, or genius, or labour to it. They come of themselves, as the water flows to it. So a broad, healthy, massive understanding seems to lie on the shore of unseen rivers, of unseen oceans, which are covered with barks, that, night and day, are drifted to this point. That is poured into its lap, which other men lie plotting for. It is in everybody's secret; anticipates everybody's discovery; and if it do not command every fact of the genius and the scholar, it is because it is large and sluggish, and does not think them worth the exertion which you do.

This affirmative force is in one, and is not in another, as one horse has the spring in him, and another in the whip. "On the neck of the young man," said Hafiz, "sparkles no gem so gracious as enterprise." Import into any stationary district, as into an old Dutch population in New York or Pennsylvania, or among the planters of Virginia, a colony of hardy Yankees, with seething brains, heads full of steam-hammer, pulley, crank, and toothed wheel,—and everything begins to shine with values. What enhancement to all the water and land in England is the arrival of James Watt or Brunel! In every company, there is not only the active and passive sex, but in both men and women, a deeper and more important *sex of mind*, namely, the inventive or creative class of both men and women, and the uninventive or accepting class. Each *plus* man represents his set, and, if he have the accidental advantage of personal ascendancy,—which implies neither more nor less of talent, but merely the temperamental or taming eye of a

will admit his right to absorb them. The merchant works by book-keeper and cashier; the lawyer's authorities are hunted up by clerks; the geologist reports the surveys of his sub-alterns; Commander Wilkes appropriates the results of all the naturalists attached to the Expedition; Thorwaldsen's statue is finished by stonecutters; Dumas has journeymen; and Shakespeare was theatre-manager, and used the labour of many young men, as well as the playbooks.

There is always room for a man of force, and he makes room for many. Society is a troop of thinkers, and the best heads among them take the best places. A feeble man can see the farms that are fenced and tilled, the houses that are built. The strong man sees the possible houses and farms. His eye makes estates as fast as the sun breeds clouds.

When a new boy comes into school, when a man travels, and encounters strangers every day, or, when into any old club a new-comer is domesticated, that happens which befalls when a strange ox is driven into a pen or pasture where cattle are kept; there is at once a trial of strength between the best pair of horns and the new-comer, and it is settled thenceforth which is the leader. So now, there is a measuring of strength, very courteous, but decisive, and an acquiescence thenceforward when these two meet. Each reads his fate in the other's eyes. The weaker party finds that none of his information or wit quite fits the occasion. He thought he knew this or that: he finds that he omitted to learn the end of it. Nothing that he knows will quite hit the mark, whilst all the rival's throws are good, and well thrown. But if he knew all the facts in the encyclopædia, it would not help him: for this is an affair of presence of mind, of attitude, of aplomb: the opponent has the sun and wind, and, in every cast, the choice of weapon and mark; and, when he himself is matched with some other antagonist, his own shafts fly well and hit. 'Tis a question of stomach and constitution. The second man is as good as the first,—perhaps better; but has not stoutness or stomach, as the first has, and so his wit seems over-fine or under-fine.

Health is good,—power, life, that resists disease, poison, and all enemies, and is conservative, as well as creative. Here is question, every spring, whether to graft with wax, or whether with clay; whether to whitewash or to potash, or to prune; but the one point is the thrifty tree. A good tree, that agrees with the soil, will grow in spite of blight, or bug, or pruning, or neglect, by night and by day, in all weathers and all treatments. Vivacity, leadership, must be had, and we are not

A4

B4

must have contagion, yeast, emptyings, or what not, to induce fermentation into the dough : as the torpid artist seeks inspiration at any cost, by virtue or by vice, by friend or by fiend, by prayer or by wine. And we have a certain instinct, that where is great amount of life, though gross and peccant, it has its own checks and purifications, and will be found at last in harmony with moral laws.

We watch in children with pathetic interest the degree in which they possess recuperative force. When they are hurt by us, or by each other, or go to the bottom of the class, or miss the annual prizes, or are beaten in the game,—if they lose heart, and remember the mischance in their chamber at home, they have a serious check. But if they have the buoyancy and resistance that pre-occupies them with new interest in the new moment,—the wounds cicatrise, and the fibre is the tougher for the hurt.

One comes to value this *plus* health, when he sees that all difficulties vanish before it. A timid man listening to the alarmists in Congress, and in the newspapers, and observing the profligacy of party,—sectional interests urged with a fury which shuts its eyes to consequences, with a mind made up to desperate extremities, ballot in one hand, and rifle in the other,—might easily believe that he and his country have seen their best days, and he hardens himself the best he can against the coming ruin. But, after this has been foretold with equal confidence fifty times, and government six per cents. have not declined a quarter of a mill, he discovers that the enormous elements of strength which are here in play make our politics unimportant. Personal power, freedom, and the resources of nature strain every faculty of every citizen. We prosper with such vigour, that, like thrifty trees, which grow in spite of ice, lice, mice, and borers, so we do not suffer from the profligate swarms that fatten on the national treasury. The huge animals nourish huge parasites, and the rancour of the disease attests the strength of the constitution. The same energy in the Greek *Demos* drew the remark, that the evils of popular government appear greater than they are; there is compensation for them in the spirit and energy it awakens. The rough and ready style which belongs to a people of sailors, foresters, farmers, and mechanics, has its advantages. Power educates the potentate. As long as our people quote English standards they dwarf their own proportions. A Western lawyer of eminence said to me, he wished ~~it~~ were a penal offence to bring an English law-book into a court in this country, so pernicious had he found in his experience our deference to English pre-

cedent. The very word "commerce" has only an English meaning, and is pinched to the cramp exigencies of English experience. The commerce of rivers, the commerce of rail-roads, and who knows but the commerce of air-balloons, must add an American extension to the pond-hole of admiralty. As long as our people quote English standards, they will miss the sovereignty of power; but let these rough-riders,—legislators in shirt-sleeves,—Hoosier, Sucker, Wolverine, Badger,—or whatever hard head Arkansas, Oregon, or Utah sends, half orator, half assassin, to represent its wrath and cupidity at Washington,—let these drive as they may; and the disposition of territories and public lands, the necessity of balancing and keeping at bay the snarling majorities of German, Irish, and of native millions, will bestow promptness, address, and reason at last on our buffalo-hunter, and authority and majesty of manners. The instinct of the people is right. Men expect from good whigs, put into office by the respectability of the country, much less skill to deal with Mexico, Spain, Britain, or with our own malecontent members, than from some strong transgressor, like Jefferson, or Jackson, who first conquers his own government, and then uses the same genius to conquer the foreigner. The senators who dissented from Mr. Polk's Mexican war, were not those who knew better, but those who, from political position, could afford it; not Webster, but Benton and Calhoun.

This power, to be sure, is not clothed in satin. 'Tis the power of Lynch law, of soldiers and pirates; and it bullies the peaceable and loyal. But it brings its own antidote; and here is my point,—that all kinds of power usually emerge at the same time; good energy, and bad; power of mind, with physical health; the ecstasies of devotion, with the exasperations of debauchery. The same elements are always present, only sometimes these conspicuous, and sometimes those; what was yesterday foreground, being to-day background,—what was surface, playing now a not less effective part as basis. The longer the drought lasts, the more is the atmosphere surcharged with water. The faster the ball falls to the sun, the force to fly off is by so much augmented. And, in morals, wild liberty breeds iron conscience; natures with great impulses have great resources, and return from far. In politics, the sons of democrats will be whigs; whilst red republicanism, in the father, is a spasm of nature to engender an intolerable tyrant in the next age. On the other hand, conservatism, ever more timorous and narrow, disgusts the children, and drives them for a mouthful of fresh air into radicalism.

Those who have most of this coarse energy,—the "bruisers"

who have run the gauntlet of caucus and tavern through the county or the state, have their own vices, but they have the good nature, of strength and courage. Fierce and unscrupulous, they are usually frank and direct, and above falsehood. Our politics fall into bad hands, and churchmen and men of refinement, it seems agreed, are not fit persons to send to Congress. Politics is a deleterious profession, like some poisonous handicrafts. Men in power have no opinions, but may be had cheap for any opinion, for any purpose,—and if it be only a question between the most civil and the most forcible, I lean to the last. These Hoosiers and Suckers are really better than the snivelling opposition. Their wrath is at least of a bold and manly cast. They see, against the unanimous declarations of the people, how much crime the people will bear; they proceed from step to step, and they have calculated but too justly upon their Excellencies the New England governors, and upon their Honours the New England legislators. The messages of the governors and the resolutions of the legislatures, are a proverb for expressing a sham virtuous indignation, which, in the course of events, is sure to be belied.

In trade, also, this energy usually carries a trace of ferocity. Philanthropic and religious bodies do not commonly make their executive officers out of saints. The communities hitherto founded by Socialists,—the Jesuits, the Port-Royalists, the American communities at New Harmony, at Brook Farm, at Zoar,—are only possible by installing Judas as steward. The rest of the offices may be filled by good burgesses. The pious and charitable proprietor has a foreman not quite so pious and charitable. The most amiable of country gentlemen has a certain pleasure in the teeth of the bull-dog which guards his orchard. Of the Shaker society, it was formerly a sort of proverb in the country, that they always sent the devil to market. And in representations of the Deity, painting, poetry, and popular religion have ever drawn the wrath from Hell. It is an esoteric doctrine of society, that a little wickedness is good to make muscle; as if conscience were not good for hands and legs, as if poor decayed formalists of law and order cannot run like wild goats, wolves, and conies; that, as there is a use in medicine for poisons, so the world cannot move without rogues: that public spirit and the ready hand are as well found among the malignants. 'Tis not very rare, the coincidence of sharp private and political practice with public spirit and good neighbourhood.

I knew a burly Boniface who for many years kept a public-house in one of our rural capitals. He was a knave whom the town could ill spare. He was a social, vascular creature, grasping and selfish. There was no crime which he did not or

could not commit. But he made good friends of the selectmen, served them with his best chop when they supped at his house, and also with his honour the Judge he was very cordial, grasping his hand. He introduced all the fiends, male and female, into the town, and united in his person the functions of bully, incendiary, swindler, barkeeper, and burglar. He girdled the trees, and cut off the horses' tails of the temperance people, in the night. He led the "rummies" and radicals in town-meeting with a speech. Meantime, he was civil, fat, and easy, in his house, and precisely the most public-spirited citizen. He was active in getting the roads repaired and planted with shade-trees; he subscribed for the fountains, the gas, and the telegraph; he introduced the new horse-rake, the new scraper, the baby-jumper, and what not, that Connecticut sends to the admiring citizens. He did this the easier, that the pedler stopped at his house, and paid his keeping, by setting up his new trap on the landlord's premises.

Whilst thus the energy for originating and executing work deforms itself by excess, and so our axe chops off our own fingers,—this evil is not without remedy. All the elements whose aid man calls in, will sometimes become his masters, especially those of most subtle force. Shall he, then, renounce steam, fire, and electricity, or shall he learn to deal with them? The rule for this whole class of agencies is,—all *plus* is good; only put it in the right place.

Men of this surcharge of arterial blood cannot live on nuts, herb-tea, and elegies; cannot read novels and play whist; cannot satisfy all their wants at the Thursday Lecture, or the Boston Athenæum. They pine for adventure, and must go to Pike's Peak; had rather die by the hatchet of a Pawnee than sit all day and every day at a counting-room desk. They are made for war, for the sea, for mining, hunting, and clearing; for hair-breadth adventures, huge risks, and the joy of eventful living. Some men cannot endure an hour of calm at sea. I remember a poor Malay cook, on board a Liverpool packet, who, when the wind blew a gale, could not contain his joy. "Blow!" he cried, "me do tell you, blow!" Their friends and governors must see that some vent for their explosive complexion is provided. The roisters who are destined for infamy at home; if sent to Mexico, will "cover you with glory," and come back heroes and generals. There are Oregons, Californias, and Exploring Expeditions enough appertaining to America, to find them in files to know, and in crocodiles to eat. The young English are fine animals, full of blood, and when they have no wars to breathe their riotous valours in, they seek for travels as dangerous as war, diving into maelstroms; swimming Hellesponts; wading up the snowy Himmaleh; hunting lion,

rhinoceros, elephant, in South Africa; gipsying with Borrow in Spain and Algiers; riding alligators in South America with Waterton; utilizing Bedouin, Sheik, and Pacha, with Layard; yachting among the icebergs of Lancaster Sound; peeping into craters on the equator; or running on the creases of Malays in Borneo.

The excess of virility has the same importance in general history as in private and industrial life. Strong race or strong individual rests at last on natural forces, which are best in the savage, who, like the beasts around him, is still in reception of the milk from the teats of nature. Cut off the connection between any of our works and this aboriginal source, and the work is shallow. The people lean on this, and the mob is not quite so bad an argument as we sometimes say, for it has this good side. "March without the people," said a French deputy from the tribune, "and you march into night: their instincts are a finger-pointing of Providence, always turned toward real benefit. But when you espouse an Orleans party, or a Bourbon, or a Montalembert party, or any other but an organic party, though you mean well, you have a personality instead of a principle, which will inevitably drag you into a corner."

The best anecdotes of this force are to be had from savage life, in explorers, soldiers, and buccaneers. But who cares for fallings-out of assassins, and fights of bears, or grindings of icebergs? Physical force has no value where there is nothing else. Snow in snow-banks, fire in volcanoes and solfataras, is cheap. The luxury of ice is in tropical countries and midsummer days. The luxury of fire is to have a little on our hearth: and of electricity, not volleys of the charged cloud, but the manageable stream on the battery wires. So of spirit, or energy; the rests or remains of it in the civil and moral man are worth all the cannibals in the Pacific.

In history, the great moment is, when the savage is just ceasing to be a savage, with all his hairy Pelasgic strength directed on his opening sense of beauty:—and you have Pericles and Phidias,—not yet passed over into the Corinthian civility. Everything good in nature and the world is in that moment of transition, when the swarthy juices still flow plentifully from nature, but their astringency or acidity is got out by ethics and humanity.

The triumphs of peace have been in some proximity to war. Whilst the hand was still familiar with the sword-hilt, whilst the habits of the camp were still visible in the port and complexion of the gentleman, his intellectual power culminated: the compression and tension of these stern conditions is a training for the finest and softest arts, and can rarely be com-

pensated in tranquil times, except by some analogous vigour drawn from occupations as hardy as war.

We say that success is constitutional; depends on a *plus* condition of mind and body, on power of work, on courage; that it is of main efficacy in carrying on the world, and though rarely found in the right state for an article of commerce, but oftener in the supersaturate or excess, which makes it dangerous and destructive, yet it cannot be spared, and must be had in that form, and absorbents provided to take off its edge.

The affirmative class monopolize the homage of mankind. They originate and execute all the great feats. What a force was coiled up in the skull of Napoleon! Of the sixty thousand men making his army at Eylau, it seems some thirty thousand were thieves and burglars. The men whom, in peaceful communities, we hold if we can, with iron at their legs, in prisons, under the muskets of sentinels, this man dealt with, hand to hand, dragged them to their duty, and won his victories by their bayonets.

This aboriginal might gives a surprising pleasure when it appears under conditions of supreme refinement, as in the proficient in high art. When Michael Angelo was forced to paint the Sistine Chapel in fresco, of which art he knew nothing, he went down into the Pope's gardens behind the Vatican, and with a shovel dug out ochres, red and yellow, mixed them with glue and water with his own hands, and having, after many trials, at last suited himself, climbed his ladders, and painted away, week after week, month after month, the sibyls and prophets. He surpassed his successors in rough vigour as much as in purity of intellect and refinement. He was not crushed by his one picture left unfinished at last. Michael was wont to draw his figures first in skeleton, then to clothe them with flesh, and lastly to drape them. "Ah!" said a brave painter to me thinking on these things, "if a man has failed, you will find he has dreamed instead of working. There is no way to success in our art but to take off your coat, grind paint, and work like a digger on the railroad, all day and every day."

Success goes thus invariably with a certain *plus* or positive power: an ounce of power must balance an ounce of weight. And, though a man cannot return into his mother's womb, and be born with new amounts of vivacity, yet there are two economies which are the best succedanea which the case admits. The first is, the stopping off decisively our miscellaneous activity, and concentrating our force on one or a few points; as the gardener, by severe pruning, forces the sap of the tree into one or two vigorous limbs, instead of suffering it to spindle into a sheaf of twigs.

"Enlarge not thy destiny," said the oracle: 'endeavour not

and it makes no difference whether our dissipations are coarse or fine; property and its cares, friends, and a social habit, or politics, or music, or feasting. Everything is good which takes away one plaything and delusion more, and drives us home to add one stroke of faithful work. Friends, books, pictures, lower duties, talents, flatteries, hopes,—all are distractions which cause oscillations in our giddy balloon and make a good poise and a straight course impossible. You must elect your work; you shall take what your brain can, and drop all the rest. Only so can that amount of vital force accumulate which can make the step from knowing to doing. No matter how much faculty of idle seeing a man has, the step from knowing to doing is rarely taken. 'Tis a step out of a chalk circle of imbecility into fruitfulness. Many an artist, lacking this, lacks all: he sees the masculine Angelo or Cellini with despair. He, too, is up to Nature and the First Cause in his thought. But the spasm to collect and swing his whole being into one act he has not. The poet Campbell said, that "a man accustomed to work was equal to any achievement he resolved on, and that, for himself, necessity, not inspiration, was the prompter of his muse."

Concentration is the secret of strength in politics, in war, in trade, in short, in all management of human affairs. One of the high anecdotes of the world is the reply of Newton to the inquiry "how he had been able to achieve his discoveries?"—"By always intending my mind." Or if you will have a text from politics, take this from Plutarch: "There was in the whole city but one street in which Pericles was ever seen, the street which led to the market-place and the council-house. He declined all invitations to banquets, and all gay assemblies and company. During the whole period of his administration he never dined at the table of a friend." Or if we seek an example from trade,—"I hope," said a good man to Rothschild, "your children are not too fond of money and business: I am sure you would not wish that."—"I am sure I should wish that: I wish them to give mind, soul, heart, and body to business,—that is the way to be happy. It requires a great deal of boldness and a great deal of caution to make a great fortune, and when you have got it, it requires ten times as much wit to keep it. If I were to listen to all the projects proposed to me, I should ruin myself very soon. Stick to one business, young man. Stick to your brewery (he said this to young Buxton), and you will be the great brewer of London. Be brewer, and barker, and merchant, and manufacturer, and you will soon be in the Gazette."

Many men are knowing, many are apprehensive and tedious, but they do not rush to a decision. But in our flowing affairs a decision must be made,—the best, if you can; but any is better than none. There are twenty ways of going to a point, and one is the shortest; but set out at once on one. A man who has that presence of mind which can bring to him on the instant all he knows, is worth for action a dozen men who know as much, but can only bring it to light slowly. The good Speaker in the House is not the man who knows the theory of parliamentary tactics, but the man who decides off-hand. The good judge is not he who does hair-splitting justice to every allegation, but who, aiming at substantial justice, rules something intelligible for the guidance of suitors. The good lawyer is not the man who has an eye to every side and angle of contingency, and qualifies all his qualifications, but who throws himself on your part so heartily, that he can get you out of a scrape. Dr. Johnson said, in one of his flowing sentences, "Miserable beyond all names of wretchedness is that unhappy pair who are doomed to reduce beforehand to the principles of abstract reason all the details of each domestic day. There are cases where little can be said, and much must be done."

The second substitute for temperament is drill, the power of use and routine. The hack is a better roadster than the Arab barb. In chemistry, the galvanic stream, slow, but continuous, is equal in power to the electric spark, and is, in our arts, a better agent. So in human action, against the spasm of energy we offset the continuity of drill. We spread the same amount of force over much time, instead of condensing it into a moment. 'Tis the same ounce of gold here in a ball, and there in a leaf. At West Point, Colonel Buford, the chief engineer, pounded with a hammer on the trunnions of a cannon, until he broke them off. He fired a piece of ordnance some hundred times in swift succession, until it burst. Now which stroke broke the trunnion? Every stroke. Which must burst the piece? Every blast. "*Diligence passe sens*," Henry VIII. was wont to say, or, great is drill. John Kemble said, that the worst provincial company of actors would go through a play better than the best amateur company. Basil Hall likes to show that the worst regular troops will beat the best volunteers. Practice is nineteenth. A course of mobs is good practice for orators. All the great speakers were bad speakers at first. Stumping it through England for seven years made Cobden a consummate debater. Stumping it through New England for twice seven trained Wendell Phillips. The way to learn German is, to read the same dozen pages over and over a hundred times, till you know

every word and particle in them, and can pronounce and repeat them by heart. No genius can recite a ballad at first reading so well as mediocrity can at the fifteenth or twentieth reading. The rule for hospitality and Irish 'help,' is, to have the same dinner every day throughout the year. At last, Mrs. O'Shaughnessy learns to cook it to a nicety, the host learns to carve it, and the guests are well served. A humorous friend of mine thinks, that the reason why nature is so perfect in her art, and gets up such inconceivably fine sunsets, is, that she has learnt how, at last, by dint of doing the same thing so very often. Cannot one converse better on a topic on which he has experience, than on one which is new? Men whose opinion is valued on 'Change, are only such as have a special experience, and off that ground their opinion is not valuable. "More are made good by exercitation than by nature," said Democritus. The friction in nature is so enormous that we cannot spare any power. It is not question to express our thought, to elect our way, but to overcome resistances of the medium and material in everything we do. Hence the use of drill, and the worthlessness of amateurs to cope with practitioners. Six hours every day at the piano, only to give facility of touch; six hours a day at painting, only to give command of the odious materials, oil, ochres, and brushes. The masters say, that they know a master in music only by seeing the pose of the hands on the keys;—so difficult and vital an act is the command of the instrument. To have learned the use of the tools, by thousands of manipulations, to have learned the arts of reckoning, by endless adding and dividing, is the power of the mechanic and the clerk.

I remarked in England, in confirmation of a frequent experience at home, that, in literary circles, the men of trust and consideration, bookmakers, editors, university deans and professors, bishops, too, were by no means men of the largest literary talent, but usually of a low and ordinary intellectuality, with a sort of mercantile activity and working talent. Indifferent hacks and mediocrities tower, by pushing their forces to a lucrative point, or by working power, over multitudes of superior men, in Old as in New England.

• I have not forgotten that there are sublime considerations which limit the value of talent and superficial success. We can easily overpraise the vulgar hero. There are sources on which we have not drawn. I know what I abstain from. I adjourn what I have to say on this topic to the chapters on Culture and Worship. But this force or spirit, being the means relied on by nature for bringing the work of the day about,—as far as we attach importance to household life, and the prizes of the world, we must respect that. And I hold,

that an economy may be applied to it; it is as much a subject of exact law and arithmetic as fluids and gases are; it may be husbanded, or wasted; every man is efficient only as he is a container or vessel of this force, and never was any signal act or achievement in history but by this expenditure. This is not gold, but the gold-maker; not the fame, but the exploit.

If these forces and this husbandry are within reach of our will, and the laws of them can be read, we infer that all success, and all conceivable benefit for man, is also, first or last, within his reach, and has its own sublime economies by which it may be attained. The world is mathematical, and has no casualty in all its vast and flowing curve. Success has no more eccentricity than the gingham and muslin we weave in our mills. I know no more affecting lesson to our busy, plotting New England brains, than to go into one of the factories with which we have lined all the watercourses in the States. A man hardly knows how much he is a machine until he begins to make telegraph, loom, press, and locomotive, in his own image. But in these, he is forced to leave out his follies and hindrances, so that when we go to the mill, the machine is more moral than we. Let a man dare go to a loom, and see if he be equal to it. Let machine confront machine, and see how they come out. The world-mill is more complex than the calico-mill, and the architect stooped less. In the gingham-mill, a broken thread or a shred spoils the web through a piece of a hundred yards, and is traced back to the girl that wove it, and lessens her wages. The stockholder, on being shown this, rubs his hands with delight. Are you so cunning, Mr. Profit-loss, and do you expect to swindle your master and employer, in the web you weave? A day is a more magnificent cloth than any muslin, the mechanism that makes it is infinitely cunninger, and you shall not conceal the sleezy, fraudulent, rotten hours you have slipped into the piece, nor fear that any honest thread, or straighter steel, or more inflexible shaft, will not testify in the web.

III.—WEALTH.

Who shall tell what did befall,
Far away in time, when once,
Over the lifeless ball,
Hung idle stars and suns?
What god the element obeyed?
Wings of what wind the lichen bore,
Wafting the puny seeds of power,
Which, lodged in rock, the rock abrade?

And well the primal pioneer
 Knew the strong task to it assigned,
 Patient through Heaven's enormous year
 To build in matter home for mind.
 From air the creeping centuries drew
 The matted thicket low and wide;
 This must the leaves of ages strew
 The granite slab to clothe and hide,
 Ere wheat can wave its golden pride.
 What smiths, and in what furnace, rolled
 (In dizzy æons dim and mute
 The reeling brain can ill compute)
 Copper and iron, lead, and gold?
 What oldest star the fame can save
 Of races perishing to pave
 The planet with a floor of lime?
 Dust is their pyramid and mole.
 Who saw what ferns and palms were pressed
 Under the tumbling mountain's breast,
 In the safe herbal of the coal?
 But when the quarried means were piled,
 All is waste and worthless, till
 Arrives the wise selecting will,
 And, out of slime and chaos, Wit
 Draws the threads of fair and fit.
 Then temples rose, and towns, and marts,
 The shop of toil, the hall of arts;
 Then flew the sail across the seas
 To feed the North from tropic trees;
 The storm-wind wove, the torrent span,
 Where they were bid the rivers ran;
 New slaves fulfilled the poet's dream,
 Galvanic wire, strong-shouldered steam.
 Then docks were built, and crops were stored,
 And ingots added to the hoard.
 But, though light-headed man forget,
 Remembering Matter pays her debt:
 Still, through her motes and masses, draw
 Electric thrills and ties of Law,
 Which bind the strengths of Nature wild
 To the conscience of a child.

AS soon as a stranger is introduced into any company, one of the first questions which all wish to have answered is, How does that man get his living? And with reason. He is no whole man until he knows how to earn a blameless livelihood. Society is barbarous until every industrious man can get his living without dishonest customs.

Every man is a consumer, and ought to be a producer. He fails to make his place good in the world unless he not only pays his debt, but also adds something to the common wealth.

Nor can he do justice to his genius without making some larger demand on the world than a bare subsistence. He is by constitution expensive, and needs to be rich.

Wealth has its source in applications of the mind to nature, from the rudest strokes of spade and axe up to the last secrets of art. Intimate ties subsist between thought and all production; because a better order is equivalent to vast amounts of brute labour. The forces and the resistances are nature's, but the mind acts in bringing things from where they abound to where they are wanted; in wise combining; in directing the practice of the useful arts, and in the creation of finer values, by fine art, by eloquence, by song, or the reproductions of memory. Wealth is in applications of mind to nature, and the art of getting rich consists not in industry, much less in saving, but in a better order, in timeliness, in being at the right spot. One man has stronger arms, or longer legs; another sees by the course of streams, and growth of markets, where land will be wanted, makes a clearing to the river, goes to sleep, and wakes up rich. Steam is no stronger now than it was a hundred years ago; but is put to better use. A clever fellow was acquainted with the expansive force of steam; he also saw the wealth of wheat and grass rotting in Michigan. Then he cunningly screws on the steam-pipe to the wheat-crop. Puff now, O Steam! The steam puffs and expands as before, but this time it is dragging all Michigan at its back to hungry New York and hungry England. Coal lay in ledges under the ground since the Flood, until a labourer with pick and windlass brings it to the surface. We may well call it black diamonds. Every basket is power and civilization. For coal is a portable climate. It carries the heat of the tropics to Labrador and the polar circle: and it is the means of transporting itself whithersoever it is wanted. Watt and Stephenson whispered in the ear of mankind their secret, that *a half-ounce of coal will draw two tons a mile*, and coal carries coal, by rail and by boat, to make Canada as warm as Calcutta, and with its comfort brings its industrial power.

When the farmer's peaches are taken from under the tree, and carried into town, they have a new look, and a hundred-fold value over the fruit which grew on the same bough, and lies fulsomely on the ground. The craft of the merchant is this bringing a thing from where it abounds to where it is costly.

Wealth begins in a tight roof that keeps the rain and wind out; in a good pump that yields you plenty of sweet water; in two suits of clothes, so to change your dress when you are wet; in dry sticks to burn; in a good double-wick lamp; and three meals; in a horse, or a locomotive, to cross the land; in a boat to cross the sea; in tools to work with; in books to

knowledge, and good-will.

Wealth begins with these articles of necessity. And here we must recite the iron law which Nature thunders in these northern climates. First, she requires that each man should feed himself. If, happily, his fathers have left him no inheritance, he must go to work, and by making his wants less, or his gains more, he must draw himself out of that state of pain and insult in which she forces the beggar to lie. She gives him no rest until this is done: she starves, taunts, and torments him, takes away warmth, laughter, sleep, friends, and daylight, until he has fought his way to his own loaf. Then, less peremptorily, but still with sting enough, she urges him to the acquisition of such things as belong to him. Every warehouse and shop-window, every fruit-tree, every thought of every hour, opens a new want to him, which it concerns his power and dignity to gratify. It is of no use to argue the wants down: the philosophers have laid the greatness of man in making his wants few: but will a man content himself with a hut and a handful of dried pease? He is born to be rich. He is thoroughly related; and is tempted out by his appetites and fancies to the conquest of this and that piece of nature, until he finds his well-being in the use of his planet, and of more planets than his own. Wealth requires, besides the crust of bread and the roof,—the freedom of the city, the freedom of the earth, travelling, machinery, the benefits of science, music, and fine arts, the best culture, and the best company. He is the rich man who can avail himself of all men's faculties. He is the richest man who knows how to draw a benefit from the labours of the greatest number of men, of men in distant countries, and in past times. The same correspondence that is between thirst in the stomach, and water in the spring, exists between the whole of man and the whole of nature. The elements offer their service to him. The sea, washing the equator and the poles, offers its perilous aid, and the power and empire that follow it,—day by day to his craft and audacity. "Beware of me," it says, "but if you can hold me, I am the key to all the lands." Fire offers, on its side, an equal power. Fire, steam, lightning, gravity, ledges of rock, mines of iron, lead, quicksilver, tin, and gold; forests of all woods; fruits of all climates; animals of all habits; the powers of tillage; the fabrics of his chemic laboratory; the webs of his loom; the masculine draught of his locomotive, the talismans of the machine-shop; all grand and subtile things, minerals, gases, ethers, passions, war, trade, government, are

his natural playmates, and, according to the excellence of the machinery in each human being, is his attraction for the instruments he is to employ. The world is his tool-chest, and he is successful, or his education is carried on just so far as is the marriage of his faculties with nature, or the degree in which he takes up things into himself.

The strong race is strong on these terms. The Saxons are the merchants of the world; now, for a thousand years, the leading race, and by nothing more than their quality of personal independence, and, in its special modification, pecuniary independence. No reliance for bread and games on the government, no clanship, no patriarchal style of living by the revenues of a chief, no marrying-on,—no system of clientship suits them; but every man must pay his scot. The English are prosperous and peaceable, with their habit of considering that every man must take care of himself, and has himself to thank, if he do not maintain and improve his position in society.

The subject of economy mixes itself with morals, inasmuch as it is a peremptory point of virtue that a man's independence be secured. Poverty demoralizes. A man in debt is so far a slave; and Wall Street thinks it easy for a millionaire to be a man of his word, a man of honour, but, that, in failing circumstances, no man can be relied on to keep his integrity. And when one observes in the hotels and palaces of our Atlantic capitals, the habit of expense, the riot of the senses, the absence of bonds, clanship, fellow-feeling of any kind, he feels that, when a man or a woman is driven to the wall, the chances of integrity are frightfully diminished, as if virtue were coming to be a luxury which few could afford, or, as Burke said, "a market almost too high for humanity." He may fix his inventory of necessities and of enjoyments on what scale he pleases, but if he wishes the power and privilege of thought, the chalking out his own career, and having society on his own terms, he must bring his wants within his proper power to satisfy.

The manly part is to do with might and main what you can do. The world is full of fops who never did anything, and who have persuaded beauties and men of genius to wear their fop livery, and these will deliver the fop opinion, that it is not respectable to be seen earning a living; that it is much more respectable to spend without earning; and this doctrine of the snake will come also from the elect sons of light; for wise men are not wise at all hours, and will speak five times from their taste or their humour to once from their reason. The brave workman, who might betray his feeling of it in his manners, if he do not succumb in his practice, must replace the grace or elegance forfeited by the merit of the work done.

to conciliate, whose faithful work will answer for him. The mechanic at his bench carries a quiet heart and assured manners, and deals on even terms with men of any condition. The artist has made his picture so true, that it disconcerts criticism. The statue is so beautiful, that it contracts no stain from the market, but makes the market a silent gallery for itself. The case of the young lawyer was pitiful to disgust,—a paltry matter of buttons or tweezer-cases; but the determined youth saw in it an aperture to insert his dangerous wedges, made the insignificance of the thing forgotten, and gave fame by his sense and energy to the name and affairs of the Tittleton snuff-box factory.

Society in large towns is babyish, and wealth is made a toy. The life of pleasure is so ostentatious, that a shallow observer must believe that this is the agreed best use of wealth, and, whatever is pretended, it ends in cossetting. But, if this were the main use of surplus capital, it would bring us to barricades, burned towns, and tomahawks presently. Men of sense esteem wealth to be the assimilation of nature to themselves, the converting of the sap and juices of the planet to the incarnation and nutriment of their design. Power is what they want,—not candy;—power to execute their design, power to give legs and feet, form and actuality, to their thought, which, to a clear-sighted man, appears the end for which the universe exists, and all its resources might be well applied. Columbus thinks that the sphere is a problem for practical navigation, as well as for closet geometry, and looks on all kings and peoples as cowardly landmen until they dare fit him out. Few men on the planet have more truly belonged to it. But he was forced to leave much of his map blank. His successors inherited his map, and inherited his fury to complete it.

So the men of the mine, telegraph, mill, map, and survey,—the monomaniacs, who talk up their project in marts and offices, and entreat men to subscribe:—how did our factories get built? how did North America get netted with iron rails, except by the importunity of these orators, who dragged all the prudent men in? Is partly the madness of many for the gain of a few? This *speculative* genius is the madness of few for the gain of the world. The projectors are sacrificed, but the public is the gainer. Each of these idealists, working after his thought, would make it tyrannical, if he could. He is met and antagonized by other speculators, as hot as he. The equilibrium is preserved by these counteractions, as one

tree keeps down another in the forest, that it may not absorb all the sap in the ground. And the supply in nature of railroad presidents, copper-miners, grand-joiners, smoke-burners, fire-annihilators, &c., is limited by the same law which keeps the proportion in the supply of carbon, of alum, and of hydrogen.

To be rich is to have a ticket of admission to the master-works and chief men of each race. It is to have the sea, by voyaging; to visit the mountains, Niagara, the Nile, the desert, Rome, Paris, Constantinople; to see galleries, libraries, arsenals, manufactories. The reader of Humboldt's "Cosmos" follows the marches of a man whose eyes, ears, and mind are armed by all the science, arts, and implements which mankind have anywhere accumulated, and who is using these to add to the stock. So is it with Denon, Beckford, Belzoni, Wilkinson, Layard, Kane, Lepsius, and Livingstone. "The rich man," says Saadi, "is everywhere expected and at home." The rich take up something more of the world into man's life. They include the country as well as the town, the ocean-side, the White Hills, the Far West, and the old European homesteads of man, in their notion of available material. The world is his, who has money to go over it. He arrives at the sea-shore, and a sumptuous ship has floored and carpeted for him the stormy Atlantic, and made it a luxurious hotel, amid the horrors of tempests. The Persians say, "Tis the same to him who wears a shoe, as if the whole earth were covered with leather."

Kings are said to have long arms, but every man should have long arms, and should pluck his living, his instruments, his power, and his knowing, from the sun, moon, and stars. Is not, then, the demand to be rich legitimate? Yet I have never seen a rich man. I have never seen a man as rich as all men ought to be, or with an adequate command of nature. The pulpit and the press have many common-places denouncing the thirst for wealth; but if men should take these moralists at their word, and leave off aiming to be rich, the moralists would rush to rekindle at all hazards this love of power in the people, lest civilization should be undone. Men are urged by their ideas to acquire the command over nature. Ages derive a culture from the wealth of Roman Cæsars, Leo X.'s, magnificent Kings of France, Grand Dukes of Tuscany, Dukes of Devonshire, Townleys, Vernons, and Peels, in England, or whatever great proprietors. It is the interest of all men that there should be Vaticans and Louvres full of noble works of art; British Museums, and French Gardens of Plants, Philadelphia Academies of Natural History, Bodleian, Ambrosian, Royal, Congressional Libraries.* It is the interest

sons, and Kanes, to find the magnetic and the geographic poles. We are all richer for the measurement of a degree of latitude on the earth's surface. Our navigation is safer for the chart. How intimately our knowledge of the system of the universe rests on that!—and a true economy in a state or an individual will forget its frugality in behalf of claims like these.

Whilst it is each man's interest that not only ease and convenience of living, but also wealth or surplus product, should exist somewhere, it need not be in his hands. Often it is very undesirable to him. Goethe said well, "Nobody should be rich but those who understand it." Some men are born to own, and can animate all their possessions. Others cannot; their owning is not graceful; seems to be a compromise of their character: they seem to steal their own dividends. They should own who can administer; not they who hoard and conceal; not they who, the greater proprietors they are, are only the greater beggars, but they whose work carves out work for more, opens a path for all. For he is the rich man in whom the people are rich, and he is the poor man in whom the people are poor: and how to give all access to the masterpieces of art and nature is the problem of civilization. The socialism of our day has done good service in setting men on thinking how certain civilizing benefits, now only enjoyed by the opulent, can be enjoyed by all. For example, the providing to each man the means and apparatus of science and of the arts. There are many articles good for occasional use, which few men are able to own. Every man wishes to see the ring of Saturn, the satellites and belts of Jupiter and Mars, the mountains and craters in the moon: yet how few can buy a telescope! and of those, scarcely one would like the trouble of keeping it in order, and exhibiting it. So of electrical and chemical apparatus, and many the like things. Every man may have occasion to consult books which he does not care to possess, such as cyclopædias, dictionaries, tables, charts, maps, and public documents: pictures also of birds, beasts, fishes, shells, trees, flowers, whose names he desires to know.

There is a refining influence from the arts of Design on a prepared mind, which is as positive as that of music, and not to be supplied from any other source. But pictures, engravings, statues, and casts, beside their first cost, entail expenses, as of galleries and keepers for the exhibition; and the use which any man can make of them is rare, and their value, too, is much enhanced by the numbers of men who can share their

enjoyment. In the Greek cities, it was reckoned profane that any person should pretend a property in a work of art which belonged to all who could behold it. I think sometimes,—could I only have music on my own terms;—could I live in a great city, and know where I could go whenever I wished the ablution and inundation of musical waves,—that were a bath and a medicine.

If properties of this kind were owned by states, towns, and lyceums, they would draw the bonds of neighbourhood closer. A town would exist to an intellectual purpose. In Europe, where the feudal forms secure the permanence of wealth in certain families, those families buy and preserve these things, and lay them open to the public. But in America, where democratic institutions divide every estate into small portions, after a few years, the public should step into the place of these proprietors and provide this culture and inspiration for the citizen.

Man was born to be rich, or inevitably grows rich by the use of his faculties; by the union of thought with nature. Property is an intellectual production. The game requires coolness, right reasoning, promptness, and patience in the players. Cultivated labour drives out brute labour. An infinite number of shrewd men, in infinite years, have arrived at certain best and shortest ways of doing, and this accumulated skill in arts, cultures, harvestings, curings, manufactures, navigations, exchanges, constitutes the worth of our world to-day.

Commerce is a game of skill, which every man cannot play, which few men can play well. The right merchant is one who has the just average of faculties we call *common sense*; a man of a strong affinity for facts, who makes up his decision on what he has seen. He is thoroughly persuaded of the truths of arithmetic. There is always a reason *in the man* for his good or bad fortune, and so in making money. Men talk as if there were some magic about this, and believe in magic in all parts of life. He knows that all goes on the old road, pound for pound, cent for cent,—for every effect a perfect cause,—and that good luck is another name for tenacity of purpose. He insures himself in every transaction, and likes small and sure gains. Probity and closeness to the facts are the basis, but the masters of the art add a certain long arithmetic. The problem is, to combine many and remote operations with the accuracy and adherence to the facts, which is easy in near and small transactions; so to arrive at gigantic results, without any compromise of safety. Napoleon was fond of telling the story of the Marseilles banker, who said to his visitor, surprised at the contrast between the

"Young man, you are too young to understand how masses are formed,—the true and only power,—whether composed of money, water, or men, it is all alike,—a mass is an immense centre of motion, but it must be begun, it must be kept up;" and he might have added, that the way in which it must be begun and kept up is by obedience to the law of particles.

Success consists in close appliance to the laws of the world, and, since those laws are intellectual and moral, an intellectual and moral obedience. Political economy is as good a book wherein to read the life of man, and the ascendancy of laws over all private and hostile influences, as any Bible which has come down to us.

Money is representative, and follows the nature and fortunes of the owner. The coin is a delicate meter of civil, social, and moral changes. The farmer is covetous of his dollar, and with reason. It is no wait to him. He knows how many strokes of labour it represents. His bones ache with the days' work that earned it. He knows how much land it represents;—how much rain, frost, and sunshine. He knows that, in the dollar, he gives you so much discretion and patience, so much hoeing and thrashing. Try to lift his dollar; you must lift all that weight. In the city, where money follows the skit of a pen, or a lucky rise in exchange, it comes to be looked on as light. I wish the farmer held it dearer, and would spend it only for real bread, force for force.

The farmer's dollar is heavy, and the clerk's is light and nimble; leaps out of his pocket; jumps on to cards and farotables: but still more curious is its susceptibility to metaphysical changes. It is the finest barometer of social storms, and announces revolutions.

Every step of civil advancement makes every man's dollar worth more. In California, the country where it grew,—what would it buy? A few years since, it would buy a shanty, dysentery, hunger, bad company, and crime. There are wide countries like Siberia, where it would buy little else to-day than some petty mitigation of suffering. In Rome, it will buy beauty and magnificence. Forty years ago, a dollar would not buy much in Boston. Now it will buy a great deal more in our old town, thanks to railroads, telegraphs, steamers, and the contemporaneous growth of New York, and the whole country. Yet there are many goods appertaining to a capital city, which are not yet purchasable here, no, not with a mountain of dollars. A dollar in Florida is not worth a dollar in Massachusetts. A dollar is not value, but representative of value, and, at last, of moral values. A dollar is rated

for the corn it will buy, or, to speak strictly, not for the corn or house-room, but for Athenian corn and Roman house-room,—for the wit, probity, and power, which we eat bread and dwell in houses to share and exert. Wealth is mental; wealth is moral. The value of a dollar is, to buy just things: a dollar goes on increasing in value with all the genius and all the virtue of the world. A dollar in a university is worth more than a dollar in a jail; in a temperate, schooled, law-abiding community, than in some sink of crime, where dice, knives, and arsenic are in constant play.

The "Bank-note Detector" is a useful publication. But the current dollar, silver or paper, is itself the detector of the right and wrong where it circulates. Is it not instantly enhanced by the increase of equity? If a trader refuses to sell his vote, or adheres to some odious right, he makes so much more equity in Massachusetts; and every acre in the State is more worth in the hour of his action. If you take out of State Street the ten honestest merchants, and put in ten roguish persons, controlling the same amount of capital,—the rates of insurance will indicate it; the soundness of banks will show it: the highways will be less secure: the schools will feel it; the children will bring home their little dose of the poison: the judge will sit less firmly on the bench, and his decisions be less upright; he has lost so much support and constraint,—which all need; and the pulpit will betray it, in a laxer rule of life. An apple-tree, if you take out every day for a number of days, a load of loam, and put in a load of sand about its roots, will find it out. An apple-tree is a stupid kind of creature, but if this treatment be pursued for a short time, I think it would begin to mistrust something. And if you should take out of the powerful class engaged in trade a hundred good men, and put in a hundred bad, or, what is just the same thing, introduce a demoralizing institution, would not the dollar, which is not much stupider than an apple-tree, presently find it out? The value of a dollar is social, as it is created by society. Every man who removes into this city, with any purchasable talent or skill in him, gives to every man's labour in the city a new worth. If a talent is anywhere born into the world, the community of nations is enriched; and, much more, with a new degree of probity. The expense of crime, one of the principal charges of every nation, is so far stopped. In Europe, crime is observed to increase or abate with the price of bread. If the Rothschilds at Paris do not accept bills, the people at Manchester, at Paisley, at Birmingham, are forced into the highway, and landlords are shot down in Ireland. The police records attest it. The vibrations are presently felt in New York, New Orleans, and Chicago. Not

loom, and there is peace, and the harvests are saved. He takes it, and there is war, and an agitation through a large portion of mankind, with every hideous result, ending in revolution, and a new order.

Wealth brings with it its own checks and balances. The basis of political economy is non-interference. The only safe rule is found in the self-adjusting meter of demand and supply. Do not legislate. Meddle, and you snap the sinews with your sumptuary laws. Give no bounties: make equal laws: secure life and property, and you need not give alms. Open the doors of opportunity to talent and virtue, and they will do themselves justice, and property will not be in bad hands. In a free and just commonwealth, property rushes from the idle and imbecile to the industrious, brave, and persevering.

The laws of nature play through trade, as a toy-battery exhibits the effects of electricity. The level of the sea is not more surely kept, than is the equilibrium of value in society by the demand and supply: and artifice or legislation punishes itself, by reactions, gluts, and bankruptcies. The sublime laws play indifferently through atoms and galaxies. Whoever knows what happens in the getting and spending of a loaf of bread and a pint of beer; that no wishing will change the rigorous limits of pints and penny loaves; that, for all that is consumed, so much less remains in the basket and pot; but what is gone out of these is not wasted, but well spent, if it nourish his body, and enable him to finish his task;—knows all of political economy that the budgets of empires can teach him. The interest of petty economy is this symbolization of the great economy; the way in which a house, and a private man's methods, tally with the solar system, and the laws of give and take, throughout nature; and, however wary we are of the falsehoods and petty tricks which we suicidally play off on each other, every man has a certain satisfaction, whenever his dealing touches on the inevitable facts; when he sees that things themselves dictate the price, as they always tend to do, and, in large manufactures, are seen to do. Your paper is not fine or coarse enough,—is too heavy or too thin. The manufacturer says, he will furnish you with just that thickness or thinness you want; the pattern is quite indifferent to him; here is his schedule;—any variety of paper, as cheaper or dearer, with the prices annexed. A pound of paper costs so much, and you may have it made up in any pattern you fancy.

There is in all our dealings a self-regulation that supersedes chaffering. You will rent a house, but must have it cheap. The owner can reduce the rent, but so he incapacitates himself

from making proper repairs, and the tenant gets not the house he would have, but a worse one; besides that, a relation a little injurious is established between landlord and tenant. You dismiss your labourer, saying, "Patrick, I shall send for you as soon as I cannot do without you." Patrick goes off contented, for he knows that the weeds will grow with the potatoes, the vines must be planted next week, and, however unwilling you may be, the cantaloupes, crooknecks, and cucumbers will send for him. Who but must wish that all labour and value should stand on the same simple and surly market? If it is the best of its kind it will. We must have joiner, locksmith, planter, priest, poet, doctor, cook, weaver, ostler, each in turn, through the year.

If a St. Michael's pear sells for a shilling, it costs a shilling to raise it. If, in Boston, the best securities offer twelve per cent. for money, they have just six per cent. of insecurity. You may not see that the fine pear costs you a shilling, but it costs the community so much. The shilling represents the number of enemies the pear has, and the amount of risk in ripening it. The price of coal shows the narrowness of the coal-field, and a compulsory confinement of the miners to a certain district. All salaries are reckoned on contingent as well as on actual services. "If the wind were always southwest by west," said the skipper, "women might take ships to sea." One might say, that all things are of one price; that nothing is cheap or dear; and that the apparent disparities that strike us are only a shopman's trick of concealing the damage in your bargain. A youth coming into the city from his native New Hampshire farm, with its hard fare still fresh in his remembrance, boards at a first class hotel, and believes he must somehow have outwitted Dr. Franklin and Malthus, for luxuries are cheap. But he pays for the one convenience of a better dinner by the loss of some of the richest social and educational advantages. He has lost what guards! what incentives! He will perhaps find by-and-by that he left the Muses at the door of the hotel, and found the Furies inside. Money often costs too much, and power and pleasure are not cheap. The ancient poet said, "the gods sell all things at a fair price."

There is an example of the compensations in the commercial history of this country. When the European wars threw the carrying-trade of the world, from 1800 to 1812, into American bottoms, a seizure was now and then made of an American ship. Of course the loss was serious to the owner, but the country was indemnified; for we charged threepence a pound for carrying cotton, sixpence for tobacco, and so on; which paid for the risk and loss, and brought into the country an immense prosperity, early marriages, private wealth, the build-

ing of cities and of states: and, after the war was over, we received compensation over and above, by treaty, for all the seizures. Well, the Americans grew rich and great. But the pay-day comes round. Britain, France, and Germany, which our extraordinary profits had impoverished, send out, attracted by the fame of our advantages, first their thousands, then their millions, of poor people to share the crop. At first, we employ them, and increase our prosperity: but, in the artificial system of society and of protected labour, which we also have adopted and enlarged, there come presently checks and stoppages. Then we refuse to employ these poor men. But they will not so be answered. They go into the poor rates, and, though we refuse wages, we must now pay the same amount in the form of taxes. Again, it turns out that the largest proportion of crimes are committed by foreigners. The cost of the crime, and the expense of courts and of prisons, we must bear, and the standing army of preventive police we must pay. The cost of education of the posterity of this great colony I will not compute. But the gross amount of these costs will begin to pay back what we thought was a net gain from our transatlantic customers of 1800. It is vain to refuse this payment. We cannot get rid of these people, and we cannot get rid of their will to be supported. That has become an inevitable element of our politics; and, for their votes, each of the dominant parties courts and assists them to get it executed. Moreover, we have to pay, not what would have contented them at home, but what they have learned to think necessary here; so that opinion, fancy, and all manner of moral considerations complicate the problem.

There are a few measures of economy which will bear to be named without disgust; for the subject is tender, and we may easily have too much of it; and therein resembles the hideous animalcules of which our bodies are built up,—which, offensive in the particular, yet compose valuable and effective masses. Our nature and genius force us to respect ends, whilst we use means. We must use the means, and yet, in our most accurate using, somehow screen and cloak them, as we can only give them any beauty by a reflection of the glory of the end. That is the good head, which serves the end, and commands the means. The rabble are corrupted by their means: the means are too strong for them, and they desert their end.

1. The first of these measures is that each man's expense must proceed from his character. As long as your genius buys, the investment is safe, though you spend like a monarch. Nature arms each man with some faculty which enables him to do easily some feat impossible to any other, and thus makes

him necessary to society. This native determination guides his labour and his spending. He wants an equipment of means and tools proper to his talent. And to save on this point were to neutralize the special strength and helpfulness of each mind. Do your work, respecting the excellence of the work, and not its acceptableness. This is so much economy, that, rightly read, it is the sum of economy. Profligacy consists not in spending years of time or chests of money, but in spending them off the line of your career. The crime which bankrupts men and states is job-work—declining from your main design to serve a turn here or there. Nothing is beneath you, if it is in the direction of your life: nothing is great or desirable, if it is off from that. I think we are entitled here to draw a straight line, and say, that society can never prosper, but must always be bankrupt, until every man does that which he was created to do.

Spend for your expense, and retrench the expense which is not yours. Allston, the painter, was wont to say, that he built a plain house, and filled it with plain furniture, because he would hold out no bribe to any to visit him who had not similar tastes to his own. We are sympathetic, and, like children, want everything we see. But it is a large stride to independence, when a man, in the discovery of his proper talent, has sunk the necessity for false expenses. As the betrothed maiden, by one secure affection, is relieved from a system of slaveries,—the daily inculcated necessity of pleasing all,—so the man who has found what he can do can spend on that, and leave all other spending. Montaigne said, “When he was a younger brother, he went brave in dress and equipage, but afterward his chateau and farms might answer for him.” Let a man who belongs to the class of nobles—those, namely, who have found out that they can do something—relieve himself of all vague squandering on objects not his. Let the realist not mind appearances. Let him delegate to others the costly courtesies and decorations of social life. The virtues are economists, but some of the vices are also. Thus, next to humility, I have noticed that pride is a pretty good husband. A good pride is, as I reckon it, worth from five hundred to fifteen hundred a year. Pride is handsome, economical; pride eradicates so many vices, letting none subsist but itself, that it seems as if it were a great gain to exchange vanity for pride. Pride can go without domestics, without fine clothes—can live in a house with two rooms, can eat potato, purslain, beans, lyed corn—can work on the soil, can travel afoot, can talk with poor men, or sit silent well contented in fine saloons. But vanity costs money, labour, horses, men, women, health, and peace, and is still nothing at last, a long

way leading nowhere—only one drawback: proud people are intolerably selfish, and the vain are gentle and giving.

Art is a jealous mistress, and, if a man have a genius for painting, poetry, music, architecture, or philosophy, he makes a bad husband, and an ill provider, and should be wise in season, and not fetter himself with duties which will embitter his days, and spoil him for his proper work. We had in this region, twenty years ago, among our educated men, a sort of Arcadian fanaticism, a passionate desire to go upon the land, and unite farming to intellectual pursuits. Many effected their purpose, and made the experiment, and some became downright ploughmen; but all were cured of their faith that scholarship and practical farming (I mean with one's own hands) could be united.

With brow bent, with firm intent, the pale scholar leaves his desk to draw a freer breath, and get a juster statement of his thought in the garden walk. He stoops to pull up a purslain, or a dock, that is choking a young corn, and finds there are two: close behind the last is a third; he reaches out his hand to a fourth; behind that are four thousand and one. He is heated and untuned, and, by-and-by, wakes up from his idiot dream of chickweed and red-root, to remember his morning thought, and to find that, with his adamantine purposes, he has been duped by a dandelion. A garden is like those pernicious machineries we read of, every month, in the newspapers, which catch a man's coat-skirt or his hand, and draw in his arm, his leg, and his whole body to irresistible destruction. In an evil hour he pulled down his wall, and added a field to his homestead. No land is bad but land is worse. If a man own land, the land owns him. Now let him leave home, if he dare. Every tree and graft, every hill of melons, row of corn, or quickset hedge, all he has done and all he means to do, stand in his way, like duns, when he would go out of his gate. The devotion to these vines and trees he finds poisonous. Long free walks, a circuit of miles, free his brain, and serve his body. Long marches are no hardship to him. He believes he composes easily on the hills. But this pottering in a few square yards of garden is dispiriting and dulling. The smell of the plants has drugged him, and robbed him of energy. He finds a catalepsy in his bones. He grows peevish and poor-spirited. The genius of reading and of gardening are antagonistic, like resinous and vitreous electricity. One is concentrative in sparks and shocks: the other is diffuse strength; so that each disqualifies its workmen for the other's duties.

An engraver whose hands must be of an exquisite delicacy of stroke should not lay stone walls. Sir David Brewster

2. Spend after your genius, and by system. Nature goes by rule, not by sallies and saltations. There must be system in the economies. Saving and unexpensiveness will not keep the most pathetic family from ruin, nor will bigger incomes make free spending safe. The secret of success lies never in the amount of money, but in the relation of income to outgo; as if, after expense has been fixed at a certain point, then new and steady rills of income, though never so small, being added, wealth begins. But in ordinary, as means increase, spending increases faster, so that large incomes, in England and elsewhere, are found not to help matters;—the eating quality of debt does not relax its voracity. When the cholera is in the potato, what is the use of planting larger crops? In England, the richest country in the universe, I was assured by shrewd observers that great lords and ladies had no more guineas to give away than other people; that liberality with money is as rare, and as immediately famous a virtue, as it is here. Want is a growing giant whom the coat of Have was never large enough to cover. I remember in Warwickshire to have been shown a fair manor, still in the same name as in Shakespeare's time. The rent-roll, I was told, is some fourteen thousand pounds a year: but when the second son of the late proprietor was born, the father was perplexed how to provide for him. The eldest son must inherit the manor; what to do with this supernumerary? He was advised to breed him for the Church, and to settle him in the rectorship, which was in the gift of the family; which was done. It is a general rule in that country, that bigger incomes do not help anybody. It is commonly observed, that a sudden wealth, like a prize drawn in a lottery, or a large bequest to a poor family, does not permanently enrich. They have served no apprenticeship to wealth, and, with the rapid wealth, come rapid claims: which they do not know how to deny, and the treasure is quickly dissipated.

A system must be in every economy, or the best single expedients are of no avail. A farm is a good thing when it begins and ends with itself, and does not need a salary, or a shop, to eke it out. Thus, the cattle are a main link in the chain-ring. If the nonconformist or æsthetic farmer leaves out the cattle, and does not also leave out the want which the cattle must supply, he must fill the gap by begging or stealing. When men now alive were born, the farm yielded everything

A4

B4

lent his yoke of oxen, or his horse, and kept his work even; hoed his potatoes, mowed his hay, reaped his rye—well knowing that no man could afford to hire labour without selling his land. In autumn, a farmer could sell an ox or a hog, and get a little money to pay taxes withal. Now, the farmer buys almost all he consumes,—tin-ware, cloth, sugar, tea, coffee, fish, coal, railroad tickets, and newspapers.

A master in each art is required, because the practice is never with still or dead subjects, but they change in your hands. You think farm-buildings and broad acres a solid property: but its value is flowing like water. It requires as much watching as if you were decanting wine from a cask. The farmer knows what to do with it, stops every leak, turns all the streamlets to one reservoir, and decants wine: but a blunderhead comes out of Cornhill, tries his hand, and it all leaks away. So is it with granite streets or timber townships as with fruit or flowers. Nor is any investment so permanent, that it can be allowed to remain without incessant watching, as the history of each attempt to lock up an inheritance through two generations for an unborn inheritor may show.

When Mr. Cockayne takes a cottage in the country, and will keep his cow, he thinks a cow is a creature that is fed on hay, and gives a pail of milk twice a day. But the cow that he buys gives milk for three months; then her bag dries up. What to do with a dry cow? who will buy her? Perhaps he bought also a yoke of oxen to do his work; but they get blown and lame. What to do with blown and lame oxen? The farmer fats his, after the spring-work is done, and kills them in the fall. But how can Cockayne, who has no pastures, and leaves his cottage daily in the cars, at business hours, be pothered with fattening and killing oxen? He plants trees; but there must be crops, to keep the trees in ploughed land. What shall be the crops? He will have nothing to do with trees, but will have grass. After a year or two, the grass must be turned up and ploughed: now what crops? Credulous Cockayne!

3. Help comes in the custom of the country, and the rule of *Impera parendo*. The rule is not to dictate, nor to insist on carrying out each of your schemes by ignorant wilfulness, but to learn practically the secret spoken from all nature, that things themselves refuse to be mismanaged, and will show to the watchful their own law. Nobody need stir hand or foot. The custom of the country will do it all. I know not how to build or to plant; neither how to buy wood, nor what to do

to corn; and you cannot help or hinder it. Nature has her own best mode of doing each thing, and she has somewhere told it plainly, if we will keep our eyes and ears open. If not, she will not be slow in undeceiving us, when we prefer our own way to hers. How often we must remember the art of the surgeon, which, in replacing the broken bone, contents itself with releasing the parts from false position; they fly into place by the action of the muscles. On this art of nature all our arts rely.

Of the two eminent engineers in the recent construction of railways in England, Mr. Brunel went straight from terminus to terminus, through mountains, over streams, crossing highways, cutting ducal estates in two, and shooting through this man's cellar, and that man's attic window, and so arriving at his end, at great pleasure to geometers, but with cost to his company. Mr. Stephenson, on the contrary, believing that the river knows the way, followed his valley, as implicitly as our Western Railroad follows the Westfield River, and turned out to be the safest and cheapest engineer. We say the cows laid out Boston. Well, there are worse surveyors. Every pedestrian in our pastures has frequent occasion to thank the cows for cutting the best path through the thicket, and over the hills: and travellers and Indians know the value of a buffalo-trail, which is sure to be the easiest possible pass through the ridge.

When a citizen, fresh from Dock Square, or Milk Street, comes out and buys land in the country, his first thought is to a fine outlook from his windows: his library must command a western view: a sunset every day, bathing the shoulder of Blue Hills, Wachusett, and the peaks of Monadnoc and Unadunuc. What, thirty acres, and all this magnificence for fifteen hundred dollars! It would be cheap at fifty thousand. He proceeds at once, his eyes dim with tears of joy, to fix the spot for his corner-stone. But the man who is to level the ground thinks it will take many hundred loads of gravel to fill the hollow to the road. The stonemason who should build the well thinks he shall have to dig forty feet: the baker doubts he shall never like to drive up to the door: the practical neighbour cavils at the position of the barn; and the citizen comes to know that his predecessor the farmer built the house in the right spot for the sun and wind, the spring, and water-drainage, and the convenience to the pasture, the garden, the field, and the road. So Dock Square yields the point, and

A4

B4

farmer affects to take his orders; but the citizen says, You may ask me as often as you will, and in what ingenious forms, for an opinion concerning the mode of building my wall, or sinking my well, or laying out my acre, but the ball will rebound to you. These are matters on which I neither know, nor need to know anything. These are questions which you and not I shall answer.

Not less, within doors, a system settles itself paramount and tyrannical over master and mistress, servant and child, cousin and acquaintance. 'Tis in vain that genius or virtue or energy of character strive and cry against it. This is fate. And 'tis very well that the poor husband reads in a book of a new way of living, and resolves to adopt it at home: let him go home and try it, if he dare.

4. Another point of economy is to look for seed of the same kind as you sow: and not to hope to buy one kind with another kind. Friendship buys friendship; justice, justice; military merit, military success. Good husbandry finds wife, children, and household. The good merchant large gains, ships, stocks, and money. The good poet fame, and literary credit; but not either the other. Yet there is commonly a confusion of expectations on these points. Hotspur lives for the moment; praises himself for it; and despises Furlong, that he does not. Hotspur, of course, is poor; and Furlong a good provider. The odd circumstance is, that Hotspur thinks it a superiority in himself, this improvidence, which ought to be rewarded with Furlong's lands.

I have not at all completed my design. But we must not leave the topic, without casting one glance into the interior recesses. It is a doctrine of philosophy, that man is a being of degrees; that there is nothing in the world, which is not repeated in his body; his body being a sort of miniature or summary of the world: then that there is nothing in his body which is not repeated as in a celestial sphere in his mind: then, there is nothing in his brain which is not repeated in a higher sphere in his moral system.

5. Now these things are so in nature. All things ascend, and the royal rule of economy is, that it should ascend also, or, whatever we do must always have a higher aim. Thus it is a maxim, that money is another kind of blood. *Pecunia alter sanguis*: or, the estate of a man is only a larger kind of body, and admits of regimen analogous to his bodily circulations. So there is no maxim of the merchant, *e.g.*, "Best use of money is to pay debts;" "Every business by itself;" "Best time is

not for pleasure. It is to invest income; that is to say, to take up particulars into generals; days into integral eras,—literary, emotive, practical, of its life, and still to ascend in its investment. The merchant has but one rule, *absorb and invest*: he is to be capitalist: the scraps and filings must be gathered back into the crucible; the gas and smoke must be burned, and earnings must not go to increase expense, but to capital again. Well, the man must be capitalist. Will he spend his income, or will he invest? His body and every organ is under the same law. His body is a jar, in which the liquor of life is stored. Will he spend for pleasure? The way to ruin is short and facile. Will he not spend, but hoard for power? It passes through the sacred fermentations, by that law of Nature whereby everything climbs to higher platforms, and bodily vigour becomes mental and moral vigour. The bread he eats is first strength and animal spirits: it becomes, in higher laboratories, imagery and thought; and in still higher results courage and endurance. This is the right compound interest; this is capital doubled, quadrupled, centupled; man raised to his highest power.

The true thrift is always to spend on the higher plane; to invest and invest, with keener avarice, that he may spend in spiritual creation, and not in augmenting animal existence. Nor is the man enriched in repeating the old experiments of animal sensation, nor unless through new powers and ascending pleasures he knows himself by the actual experience of higher good, to be already on the way to the highest.

A4

B4

Can rules or tutors educate
 The semigod whom we await?
 He must be musical,
 Tremulous, impressional,
 Alive to gentle influence
 Of landscape and of sky,
 And tender to the spirit-touch
 Of man's or maiden's eye:
 But, to his native centre fast,
 Shall into Future fuse the Past,
 And the world's flowing fates in his own mould recast.

THE word of ambition at the present day is Culture. Whilst all the world is in pursuit of power, and of wealth as a means of power, culture corrects the theory of success. A man is the prisoner of his power. A topical memory makes him an almanac; a talent for debate, a disputant; skill to get money makes him a miser, that is, a beggar. Culture reduces these inflammations by invoking the aid of other powers against the dominant talent, and by appealing to the rank of powers. It watches success. For performance, Nature has no mercy, and sacrifices the performer to get it done; makes a dropsy or a tympany of him. If she wants a thumb, she makes one at the cost of arms and legs, and any excess of power in one part is usually paid for at once by some defect in contiguous part.

Our efficiency depends so much on our concentration, that Nature usually in the instances where a marked man is sent into the world, overloads him with bias, sacrificing his symmetry to his working powers. It is said, no man can write but one book; and if a man have a defect, it is apt to leave its impression on all his performances. If she creates a policeman like Fouché, he is made up of suspicions and of plots to circumvent them. "The air," said Fouché, "is full of poniards." The physician Sanctorius spent his life in a pair of scales, weighing his food. Lord Coke valued Chaucer highly, because the Canon Yeman's Tale illustrates the statute *Hen. V. Chap. 4*, against alchemy. I saw a man who believed the principal mischiefs in the English state were derived from the devotion to musical concerts. A freemason, not long since, set out to explain to this country that the principal cause of the success of General Washington was the aid he derived from the freemasons.

But worse than the harping on one string, Nature has

secured individualism by giving the private person a high conceit of his weight in the system. The pest of society is egotists. There are dull and bright, sacred and profane, coarse and fine egotists. 'Tis a disease that, like influenza, falls on all constitutions. In the distemper known to physicians as *chorea*, the patient sometimes turns round, and continues to spin slowly on one spot. Is egotism a metaphysical varioloid of this malady? The man runs round a ring formed by his own talent, falls into an admiration of it, and loses relation to the world. It is a tendency in all minds. One of its annoying forms is a craving for sympathy. The sufferers parade their miseries, tear the lint from their bruises, reveal their indictable crimes, that you may pity them. They like sickness, because physical pain will extort some show of interest from the bystanders, as we have seen children, who, finding themselves of no account when grown people come in, will cough till they choke, to draw attention.

This distemper is the scourge of talent, of artists, inventors, and philosophers. Eminent spiritualists shall have an incapacity of putting their act or word aloof from them, and seeing it bravely for the nothing it is. Beware of the man who says, "I am on the eve of a revelation." It is speedily punished, inasmuch as this habit invites men to humour it, and by treating the patient tenderly, to shut him up in a narrower selfishness, and exclude him from the great world of God's cheerful fallible men and women. Let us rather be insulted, whilst we are insultable. Religious literature has eminent examples, and if we run over our private list of poets, critics, philanthropists, and philosophers, we shall find them infected with this dropsy and elephantiasis, which we ought to have tapped.

This goitre of egotism is so frequent among notable persons that we must infer some strong necessity in Nature which it subserves; such as we see in the sexual attraction. The preservation of the species was a point of such necessity, that Nature has secured it at all hazards by immensely overloading the passion, at the risk of perpetual crime and disorder. So egotism has its root in the cardinal necessity by which each individual persists to be what he is.

This individuality is not only not inconsistent with culture, but is the basis of it. Every valuable nature is there in its own right, and the student we speak to must have a motherwit invincible by his culture, which uses all books, arts, facilities, and elegances of intercourse, but is never subdued and lost in them. He only is a well-made man who has a good determination. And the end of culture is not to destroy this, God forbid! but to train away all impediment and mixture, and

leave nothing but pure power. Our student must have a style and determination, and be a master of his own specialty. But, having this, he must put it behind him. He must have a catholicity, a power to see with a free and disengaged look every object. Yet is this private interest and self so over-charged, that, if a man seeks a companion who can look at objects for their own sake, and without affection or self-reference, he will find the fewest who will give him that satisfaction; whilst most men are afflicted with a coldness, an incuriosity, as soon as any object does not connect with their self-love. Though they talk of the object before them, they are thinking of themselves, and their vanity is laying little traps for your admiration.

But after a man has discovered that there are limits to the interest which his private history has for mankind, he still converses with his family, or a few companions,—perhaps with half a dozen personalities that are famous in his neighbourhood. In Boston, the question of life is the names of some eight or ten men. Have you seen Mr. Allston, Doctor Channing, Mr. Adams, Mr. Webster, Mr. Greenough? Have you heard Everett, Garrison, Father Taylor, Theodore Parker? Have you talked with Messieurs Turbinewheel, Summitlevel, and Lacofrupees? Then you may as well die. In New York, the question is of some other eight, or ten, or twenty. Have you seen a few lawyers, merchants, and brokers,—two or three scholars, two or three capitalists, two or three editors of newspapers? New York is a sucked orange. All conversation is at an end, when we have discharged ourselves of a dozen personalities, domestic or imported, which make up our American existence. Nor do we expect anybody to be other than a faint copy of these heroes.

Life is very narrow. Bring any club or company of intelligent men together again after ten years, and if the presence of some penetrating and calming genius could dispose them to frankness, what a confession of insanities would come up! The "causes" to which we have sacrificed, Tariff or Democracy, Whiggism or Abolition, Temperance or Socialism, would show like roots of bitterness and dragons of wrath; and our talents are as mischievous as if each had been seized upon by some bird of prey, which had whisked him away from fortune, from truth, from the dear society of the poets, some zeal, some bias, and only when he was now grey and nerveless was it relaxing its claws, and he awaking to sober perceptions.

Culture is the suggestion from certain best thoughts, that a man has a range of affinities, through which he can modulate the violence of any master-tones that have a droning prepon-

derance in his scale, and succour him against himself. Culture redresses his balance, puts him among his equals and superiors, revives the delicious sense of sympathy, and warns him of the dangers of solitude and repulsion.

'Tis not a compliment but a disparagement to consult a man only on horses, or on steam, or on theatres, or on eating, or on books, and, whenever he appears, considerately to turn the conversation to the bantling he is known to fondle. In the Norse heaven of our forefathers, Thor's house had five hundred and forty floors; and man's house has five hundred and forty floors. His excellence is facility of adaptation and of transition through many related points, to wide contrasts and extremes. Culture kills his exaggeration, his conceit of his village or his city. We must leave our pets at home, when we go into the street, and meet men on broad grounds of good meaning and good sense. No performance is worth loss of geniality. 'Tis a cruel price we pay for certain fancy goods called fine arts and philosophy. In the Norse legend, Allfadir did not get a drink of Mimir's spring (the fountain of wisdom) until he left his eye in pledge. And here is a pedant that cannot unfold his wrinkles, nor conceal his wrath at interruption by the best, if their conversation do not fit his impertinency,—here is he to afflict us with his personalities. 'Tis incident to scholars, that each of them fancies he is pointedly odious in his community. Draw him out of this limbo of irritability. Cleanse with healthy blood his parchment skin. You restore to him his eyes which he left in pledge at Mimir's spring. If you are a victim of your doing, who cares what you do? We can spare your opera, your gazetteer, your chemic analysis, your history, your syllogisms. Your man of genius pays dear for his distinction. His head runs up into a spire, and instead of a healthy man, merry and wise, he is some mad dominie. Nature is reckless of the individual. When she has points to carry, she carries them. To wade in marches and sea-margins is the destiny of certain birds, and they are so accurately made for this, that they are imprisoned in those places. Each animal out of its *habitat* would starve. To the physician, each man, each woman, is an amplification of one organ. A soldier, a locksmith, a bank-clerk, and a dancer, could not exchange functions. And thus we are victims of adaptation.

The antidotes against this organic egotism are, the range and variety of attractions, as gained by acquaintance with the world, with men of merit, with classes of society, with travel, with eminent persons, and with the high resources of philosophy, art, and religion: books, travel, society, solitude.

The hardest sceptic who has seen a horse broken, a painter

"A boy," says Plato, "is the most vicious of all wild beasts;" and, in the same spirit, the old English poet, Gascoigne, says, "a boy is better unborn than untaught." The city breeds one kind of speech and manners; the back-country a different style; the sea another; the army a fourth. We know that an army which can be confided in, may be formed by discipline; that by systematic discipline all men may be made heroes: Marshal Lannes said to a French officer, "Know, Colonel, that none but a poltroon will boast that he never was afraid." A great part of courage is the courage of having done the thing before. And, in all human action, those faculties will be strong which are used. Robert Owen said, "Give me a tiger, and I will educate him." 'Tis inhuman to want faith in the power of education, since to meliorate is the law of nature; and men are valued precisely as they exert onward or meliorating force. On the other hand, poltroonery is the acknowledging an inferiority to be incurable.

Incapacity of melioration is the only mortal distemper. There are people who can never understand a trope, or any second or expanded sense given to your words, or any humour; but remain literalists, after hearing the music, and poetry, and rhetoric, and wit, of seventy or eighty years. They are past the help of surgeon or clergy. But even these can understand pitchforks and the cry of fire; and I have noticed in some of this class a marked dislike of earthquakes.

Let us make our education brave and preventive. Politics is an after-work, a poor patching. We are always a little late. The evil is done, the law is passed, and we begin the up-hill agitation for repeal of that of which we ought to have prevented the enacting. We shall one day learn to supersede politics by education. What we call our root-and-branch reforms of slavery; war, gambling, intemperance, is only medicating the symptoms. We must begin higher up, namely, in Education.

Our arts and tools give to him who can handle them much the same advantage over the novice as if you extended his life ten, fifty, or a hundred years. And I think it the part of good sense to provide every fine soul with such culture, that it shall not, at thirty or forty years, have to say, "This which I might do is made hopeless through my want of weapons."

But it is conceded that much of our training fails of effect; that all success is hazardous and rare; that a large part of our cost and pains is thrown away. Nature takes the matter into her own hands, and, though we must not omit any jot of our system, we can seldom be sure that it has vailed much, or

that as much good would not have accrued from a different system.

Books, as containing the finest records of human wit, must always enter into our notion of culture. The best heads that ever existed, Pericles, Plato, Julius Cæsar, Shakespeare, Goethe, Milton, were well-read, universally educated men, and quite too wise to undervalue letters. Their opinion has weight, because they had means of knowing the opposite opinion. We look that a great man should be a good reader, or, in proportion to the spontaneous power should be the assimilating power. Good criticism is very rare, and always precious. I am always happy to meet persons who perceive the transcendent superiority of Shakespeare over all other writers. I like people who like Plato. Because this love does not consist with self-conceit.

But books are good only as far as a boy is ready for them. He sometimes gets ready very slowly. You send your child to the schoolmaster, but 'tis the schoolboys who educate him. You send him to the Latin class, but much of his tuition comes, on his way to school, from the shop-windows. You like the strict rules and the long terms; and he finds his best leading in a by-way of his own, and refuses any companions but of his choosing. He hates the grammar and *Gradus*, and loves guns, fishing-rods, horses, and bouts. Well, the boy is right; and you are not fit to direct his bringing up if your theory leaves out his gymnastic training. Archery, cricket, gun and fishing-rod, horse and boat, are all educators, liberalizers; and so are dancing, dress, and the street-talk; and, provided only the boy has resources, and is of a noble and ingenuous strain,—these will not serve him less than the books. He learns chess, whist, dancing, and theatricals. The father observes that another boy has learned algebra and geometry in the same time. But the first boy has acquired much more than these poor games along with them. He is infatuated for weeks with whist and chess; but presently will find out, as you did, that when he rises from the game too long played he is vacant and forlorn, and despises himself. Thenceforward it takes place with other things, and has its due weight in his experience. These minor skills and accomplishments—for example, dancing—are tickets of admission to the dress-circle of mankind, and the being master of them enables the youth to judge intelligently of much on which, otherwise, he would give a pedantic squint. Landor said, "I have suffered more from my bad dancing than from all the misfortunes and miseries of my life put together." Provided always the boy is teachable (for we are not proposing to make a statue out of punk), football, cricket, archery, swimming, skating, climbing,

fencing, riding, are lessons in the art of power, which it is his main business to learn;—riding, specially, of which Lord Herbert of Cherbury said, "A good rider on a good horse is as much above himself and others as the world can make him." Besides, the gun, fishing-rod, boat, and horse, constitute, among all who use them, **secret freemasonries**. They are as if they belonged to one club.

There is also a negative value in these arts. Their chief use to the youth is, not amusement, but to be known for what they are, and not to remain to him occasions of heartburn. We are full of superstitions. Each class fixes its eyes on the advantages it has not; the refined, on rude strength; the democrat, on birth and breeding. One of the benefits of a college education is, to show the boy its little avail. I knew a leading man in a leading city, who, having set his heart on an education at the university, and missed it, could never quite feel himself the equal of his own brothers who had gone thither. His easy superiority to multitudes of professional men could never quite countervail to him this imaginary defect. Balls, riding, wine-parties, and billiards, pass to a poor boy for something fine and romantic, which they are not; and a free admission to them on an equal footing, if it were possible, only once or twice, would be worth ten times its cost, by undeceiving him.

I am not much an advocate for travelling, and I observe that men run away to other countries because they are not good in their own, and run back to their own because they pass for nothing in the new places. For the most part, only the light characters travel. Who are you that have no task to keep you at home? I have been quoted as saying captious things about travel; but I mean to do justice. I think there is a restlessness in our people, which argues want of character. All educated Americans, first or last, go to Europe;—perhaps because it is their mental home, as the invalid habits of this country might suggest. An eminent teacher of girls said, "The idea of a girl's education is, whatever qualifies them for going to Europe." Can we never extract this tape-worm of Europe from the brain of our countrymen? One sees very well what their fate must be. He that does not fill a place at home, cannot abroad. He only goes there to hide his insignificance in a larger crowd. You do not think you will find anything there which you have not seen at home? The stuff of all countries is just the same. Do you suppose there is any country where they do not scald milkpans, and swaddle the infants, and burn the brushwood, and broil the fish? What is true anywhere is true everywhere. And let him go where he will, he can only find so much beauty or worth as he carries.

patches, as others are for farmers and working men. And if the man is of a light and social turn, and nature has aimed to make a legged and winged creature, framed for locomotion, we must follow her hint, and furnish him with that breeding which gives currency, as sedulously as with that which gives worth. But let us not be pedantic, but allow to travel its full effect. The boy grown up on the farm, which he has never left, is said in the country to have had *no chance*, and boys and men of that condition look upon work on a railroad, or drudgery in a city, as opportunity. Poor country boys of Vermont and Connecticut formerly owed what knowledge they had to their peddling trips to the Southern States. California and the Pacific coast is now the university of this class, as Virginia was in old times. "To have *some chance*" is their word. And the phrase, "to know the world," or to travel, is synonymous with all men's ideas of advantage and superiority. No doubt, to a man of sense, travel offers advantages. As many languages as he has, as many friends, as many arts and trades, so many times is he a man. A foreign country is a point of comparison wherefrom to judge his own. One use of travel is, to recommend the books and works of home [we go to Europe to be Americanized], and another, to find men. For, as nature has put fruits apart in latitudes, a new fruit in every degree, so knowledge and fine moral quality she lodges in distant men. And thus, of the six or seven teachers whom each man wants among his contemporaries, it often happens that one or two of them live on the other side of the world.

Moreover, there is in every constitution a certain solstice, when the stars stand still in our inward firmament, and when there is required some foreign force, some diversion or alternative to prevent stagnation. And, as a medical remedy, travel seems one of the best. Just as a man witnessing the admirable effect of ether to lull pain, and meditating on the contingencies of wounds, cancers, lockjaws, rejoices in Dr. Jackson's benign discovery, so a man who looks at Paris, at Naples, or at London, says, "If I should be driven from my own home, here, at least, my thoughts can be consoled by the most prodigal amusement and occupation which the human races in ages could contrive and accumulate."

Akin to the benefit of foreign travel, the æsthetic value of railroads is to unite the advantages of town and country life, neither of which we can spare. A man should live in or near a large town, because, let his own genius be what it may, it will repel quite as much of agreeable and valuable talent as it

A4

B4

most improbable terms with the country. In town, he can find the swimming-school, the gymnasium, the dancing-master, the shooting-gallery, opera, theatre, and panorama; the chemist's shop, the museum of natural history, the gallery of fine arts; the national orators, in their turn; foreign travellers, the libraries, and his club. In the country he can find solitude and reading, manly labour, cheap living, and his old shoes; moors for game, hills for geology, and groves for devotion. Aubrey writes, "I have heard Thomas Hobbes say, that, in the Earl of Devon's house, in Derbyshire, there was a good library and books enough for him, and his lordship stored the library with what books he thought fit to be bought. But the want of good conversation was a very great inconvenience, and, though he conceived he could order his thinking as well as another, yet he found a great defect. In the country, in long time, for want of good conversation, one's understanding and invention contract a moss on them, like an old paling in an orchard."

Cities give us collision. 'Tis said London and New York take the nonsense out of a man. A great part of our education is sympathetic and social. Boys and girls who have been brought up with well-informed and superior people, show in their manners an inestimable grace. Fuller says that "William, Earl of Nassau, won a subject from the King of Spain every time he put off his hat." You cannot have one well-bred man without a whole society of such. They keep each other up to any high point. Especially women;—it requires a great many cultivated women,—saloons of bright, elegant, reading women, accustomed to ease and refinement, to spectacles, pictures, sculpture, poetry, and to elegant society, in order that you should have one Madame de Staël. The head of a commercial house, or a leading lawyer or politician, is brought into daily contact with troops of men from all parts of the country, and those too the driving-wheels, the business men of each section, and one can hardly suggest for an apprehensive man a more searching culture. Besides, we must remember the high social possibilities of a million of men. The best bribe which London offers to-day to the imagination is that, in such a vast variety of people and conditions, one can believe there is room for persons of romantic character to exist, and that the poet, the mystic, and the hero may hope to confront their counterparts.

I wish cities could teach their best lesson,—of quiet manners. It is the foible especially of American youth,—pretension. The mark of the man of the world is absence of pretension. H4

his employment by its lowest name, and so takes from evil tongues their sharpest weapon. His conversation clings to the weather and the news, yet he allows himself to be surprised into thought, and the unlocking of his learning and philosophy. How the imagination is piqued by anecdotes of some great man passing incognito, as a king in grey clothes; of Napoleon affecting a plain suit at his glittering levee; of Burns, or Scott, or Beethoven, or Wellington, or Goethe, or any container of transcendent power, passing for nobody; of Epaminondas, "who never says anything, but will listen eternally;" of Goethe, who preferred trifling subjects and common expressions in intercourse with strangers, worse rather than better clothes, and to appear a little more capricious than he was. There are advantages in the old hat and box-coat. I have heard that throughout this country a certain respect is paid to good broadcloth; but dress makes a little restraint: men will not commit themselves. But the box-coat is like wine; it unlocks the tongue, and men say what they think. An old poet says:

"Go far and go sparing,
For you'll find it certain,
The poorer and baser you appear
The more you'll look through still." *

Not much otherwise Milnes writes, in the "Lay of the Humble":

"To me men are for what they are,
They wear no masks with me."

'Tis odd that our people should have—not water on the brain—but a little gas there. A shrewd foreigner said of the Americans, that, "Whatever they say has a little the air of a speech." Yet one of the traits down in the books as distinguishing the Anglo-Saxon, is, a trick of self-disparagement. To be sure, in old, dense countries, among a million of good coats, a fine coat comes to be no distinction, and you find humorists. In an English party, a man with no marked manners or features, with a face like red dough, unexpectedly discloses wit, learning, a wide range of topics, and personal familiarity with good men in all parts of the world, until you think you have fallen upon some illustrious personage. Can it be that the American forest has refreshed some weeds of old Pictish barbarism just ready to die out,—the love of the

* Beaumont and Fletcher. *The Tamer Tamed*.

B4

member one rainy morning in the city of Palermo, the street was in a blaze with scarlet umbrellas. The English have a plain taste. The equipages of the grandees are plain. A gorgeous livery indicates new and awkward city wealth. Mr. Pitt, like Mr. Pym, thought the title of *Mister* good against any king in Europe. They have piqued themselves on governing the whole world in the poor, plain, dark Committee-room which the House of Commons sat in before the fire.

Whilst we want cities as the centres where the best things are found, cities degrade us by magnifying trifles. The countryman finds the town a chop-house, a barber's shop. He has lost the lines of grandeur of the horizon, hills and plains, and with them sobriety and elevation. He has come among a supple, glib-tongued tribe, who live for show, servile to public opinion. Life is dragged down to a fracas of pitiful cares and disasters. You say the gods ought to respect a life whose objects are their own; but in cities they have betrayed you to a cloud of insignificant annoyances:

"Mirmidons, race féconde,
Mirmidons,
Enfin nous commandons;
Jupiter livre le monde
Aux mirmidons, aux mirmidons." *

"'Tis heavy odds
Against the gods,
When they will match with myrmidons.
We spawning, spawning myrmidons,
Our turn to day! we take command,
Jove gives the globe into the hand
Of myrmidons, of myrmidons."

What is odious but noise, and people who scream and bewail? people whose vane points always east, who live to dine, who send for the doctor, who coddle themselves, who toast their feet on the register, who intrigue to secure a padded chair, and a corner out of the draught? Suffer them once to begin the enumeration of their infirmities, and the sun will go down on the unfinished tale. Let these triflers put us out of conceit with petty comforts. To a man at work, the frost is but a colour: the rain, the wind, he forgot them when he came in. Let us learn to live coarsely, dress plainly, and lie hard. The least habit of dominion over the palate has certain good effects not easily estimated. Neither will we be driven into a quiddling abstemiousness. 'Tis a superstition to insist

* Béranger.

the figure you make in company, or wealth, or even the bringing things to pass, when you think how paltry are the machinery and the workers? Wordsworth was praised to me, in Westmoreland, for having afforded to his country neighbours an example of a modest household where comfort and culture were secured, without display. And a tender boy who wears his rusty cap and out-grown coat, that he may secure the coveted place in college, and the right in the library, is educated to some purpose. There is a great deal of self-denial and manliness in poor and middle-class houses, in town and country, that has not got into literature, and never will, but that keeps the earth sweet; that saves on superfluities, and spends on essentials; that goes rusty, and educates the boy; that sells the horse, but builds the school; works early and late, takes two looms in the factory, three looms, six looms, but pays off the mortgage on the paternal farm, and then goes back cheerfully to work again.

We can ill spare the commanding social benefits of cities; they must be used; yet cautiously, and haughtily,—and will yield their best values to him who best can do without them. Keep the town for occasions, but the habits should be formed to retirement. Solitude, the safeguard of mediocrity, is to genius the stern friend, the cold, obscure shelter where moult the wings which will bear it farther than suns and stars. He who should inspire and lead his race must be defended from travelling with the souls of other men, from living, breathing, reading, and writing in the daily, time-worn yoke of their opinions. "In the morning, solitude," said Pythagoras; that nature may speak to the imagination, as she does never in company, and that her favourite may make acquaintance with those divine strengths which disclose themselves to serious and abstracted thought. 'Tis very certain that Plato, Plotinus, Archimedes, Hermes, Newton, Milton, Wordsworth, did not live in a crowd, but descended into it from time to time as benefactors: and the wise instructor will press this point of securing to the young soul in the disposition of time and the arrangements of living, periods and habits of solitude. The high advantage of university-life is often the mere mechanical one, I may call it, of a separate chamber and fire,—which parents will allow the boy without hesitation at Cambridge, but do not think needful at home. We say solitude, to mark the character of the tone of thought; but if it can be shared between two or more than two, it is happier, and

B4

whose foundations are for ever friendship. The more I know of you, the more I dissatisfy and must dissatisfy all my wonted companions. Their very presence stupifies me. The common understanding withdraws itself from the one centre of all existence."

Solitude takes off the pressure of present importunities that more catholic and humane relations may appear. The saint and poet seek privacy to ends the most public and universal: and it is the secret of culture to interest the man more in his public than in his private quality. Here is a new poem, which elicits a good many comments in the journals, and in conversation. From these it is easy, at last, to eliminate the verdict which readers passed upon it; and that is, in the main, unfavourable. The poet, as a craftsman, is only interested in the praise accorded to him, and not in the censure, though it be just. And the poor little poet hearkens only to that, and rejects the censure, as proving incapacity in the critic. But the poet *cultivated* becomes a stockholder in both companies,—say Mr. Curfew,—in the Curfew stock, and in the *humanity* stock; and, in the last, exults as much in the demonstration of the unsoundness of Curfew, as his interest in the former gives him pleasure in the currency of Curfew. For, the depreciation of his Curfew stock only shows the namense values of the humanity stock. As soon as he sides with his critic against himself, with joy, he is a cultivated man.

We must have an intellectual quality in all property and in all action, or they are nought. I must have children, I must have events, I must have a social state and history, or my thinking and speaking want body or basis. But to give these accessories any value, I must know them as contingent and rather showy possessions, which pass for more to the people than to me. We see this abstraction in scholars as a matter of course: but what a charm it adds when observed in practical men. Bonaparte, like Cæsar, was intellectual, and could look at every object for itself, without affection. Though an egotist à l'outrance, he could criticize a play, a building, a character, on universal grounds, and give a just opinion. A man known to us only as a celebrity in politics or in trade, gains largely in our esteem if we discover that he has some intellectual taste or skill; as when we learn of Lord Fairfax, the Long Parliament's general, his passion for antiquarian studies; or of the French regicide Carnot, his sublime genius in mathematics; or of a living banker, his success in poetry; or of a partisan journalist, his devotion to ornithology. So, if in

travelling in the dreary wildernesses of Arkansas or Texas, we should observe on the next seat a man reading Horace, or Martial, or Calderon, we should wish to bug him. In callings that require roughest energy, soldiers, sea-captains, and civil engineers sometimes betray a fine insight, if only through a certain gentleness when off duty: a good-natured admission that there are illusions, and who shall say that he is not their sport? We only vary the phrase, not the doctrine, when we say, that culture opens the sense of beauty. A man is a beggar who only lives to the useful, and, however he may serve as a pin or rivet in the social machine, cannot be said to have arrived at self-possession. I suffer, every day, from the want of perception of beauty in people. They do not know the charm with which all moments and objects can be embellished, the charm of manners, of self-command, of benevolence. Repose and cheerfulness are the badge of the gentleman,—repose in energy. The Greek battle-pieces are calm; the heroes, in whatever violent actions engaged, retain a serene aspect; as we say of Niagara, that it falls without speed. A cheerful, intelligent face is the end of culture, and success enough. For it indicates the purpose of nature and wisdom attained.

When our higher faculties are in activity, we are domesticated, and awkwardness and discomfort give place to natural and agreeable movements. It is noticed, that the consideration of the great periods and spaces of astronomy induces a dignity of mind, and an indifference to death. The influence of fine scenery, the presence of mountains, appeases our irritations and elevates our friendships. Even a high dome, and the expansive exterior of a cathedral, have a sensible effect on manners. I have heard that stiff people lose something of their awkwardness under high ceilings, and in spacious halls. I think sculpture and painting have an effect to teach us manners and abolish hurry.

But, over all, culture must reinforce from higher influx the empirical skills of eloquence, or of politics, or of trade, and the useful arts. There is a certain loftiness of thought and power to marshal and adjust particulars, which can only come from an insight of their whole connection. The orator who has once seen things in their divine order, will never quite lose sight of this, and will come to affairs as from a higher ground, and, though he will say nothing of philosophy, he will have a certain mastery in dealing with them, and an incapableness of being dazzled or frightened, which will distinguish his handling from that of attorneys and factors. A man who stands on a good footing with the heads of parties at Washington, reads the rumours of the newspapers, and the guesses of provincial

medes will look through your Connecticut machine, at a glance, and judge of its fitness. And much more, a wise man who knows not only what Plato, but what Saint John, can show him, can easily raise the affair he deals with to a certain majesty. Plato says, Pericles owed this elevation to the lessons of Anaxagoras. Burke descended from a higher sphere when he would influence human affairs. Franklin, Adams, Jefferson, Washington, stood on a fine humanity, before which the brawls of modern senates are but pot-house politics.

But there are higher secrets of culture, which are not for the apprentices, but for proficients. These are lessons only for the brave. We must know our friends under ugly masks. The calamities are our friends. Ben Jonson specifies in his address to the Muse:

Get him the time's long grudge, the court's ill-will,
And, reconciled, keep him suspected still,
Make him lose all his friends, and, what is worse,
Almost all ways to any better course;
With me thou leav'st a better Muse than thee,
And which thou brought'st me, blessed Poverty."

We wish to learn philosophy by rote, and play at heroism. But the wiser God says, Take the shame, the poverty, and the penal solitude, that belong to truth-speaking. Try the rough water as well as the smooth. Rough water can teach lessons worth knowing. When the state is unquiet, personal qualities are more than ever decisive. Fear not a revolution which will constrain you to live five years in one. Don't be so tender at making an enemy now and then. Be willing to go to Coventry sometimes, and let the populace bestow on you their coldest contempts. The finished man of the world must eat of every apple once. He must hold his hatreds also at arm's length, and not remember spite. He has neither friends nor enemies, but values men only as channels of power.

He who aims high, must dread an easy home and popular manners. Heaven sometimes hedges a rare character about with ungainliness and odium, as the burr that protects the fruit. If there is any great and good thing in store for you, it will not come at the first or the second call, nor in the shape of fashion, ease, and city drawing-rooms. Popularity is for dolls. "Steep and craggy," said Porphyry, "is the path of the gods." Open your Marcus Antoninus. In the opinion of the ancients, he was the great man who scorned to shine, and who contested the frowns of fortune. They preferred the noble vessel too late

for the tide, contending with winds and waves, dismantled and unrigged, to her companion borne into harbour with colours flying and guns firing. There is none of the social goods that may not be purchased too dear, and mere amiableness must not take rank with high aims and self-subsistency.

Bettine replies to Goethe's mother, who chides her disregard of dress,—“If I cannot do as I have a mind, in our poor Frankfurt, I shall not carry things far.” And the youth must rate at its true mark the inconceivable levity of local opinion. The longer we live, the more we must endure the elementary existence of men and women; and every brave heart must treat society as a child, and never allow it to dictate.

“All that class of the severe and restrictive virtues,” said Burke, “are almost too costly for humanity.” Who wishes to be severe? Who wishes to resist the eminent and polite, in behalf of the poor, and low, and impolite? and who that dares do it can keep his temper sweet, his frolic spirits? The high virtues are not debonair, but have their redress in being illustrious at last. What forests of laurel we bring, and the tears of mankind, to those who stood firm against the opinion of their contemporaries! The measure of a master is his success in bringing all men round to his opinion twenty years later.

Let me say here, that culture cannot begin too early. In talking with scholars, I observe that they lost on ruder companions those years of boyhood which alone could give imaginative literature a religious and infinite quality in their esteem. I find, too, that the chance for appreciation is much increased by being the son of an appreciator, and that these boys who now grow up are caught not only years too late, but two or three births too late, to make the best scholars of. And I think it a presentable motive to a scholar that as, in an old community, a well-born proprietor is usually found, after the first heats of youth, to be a careful husband, and to feel a habitual desire that the estate shall suffer no harm by his administration, but shall be delivered down to the next heir in as good condition as he received it;—so, a considerate man will reckon himself a subject of that secular melioration by which mankind is mollified, cured, and refined, and will shun every expenditure of his forces on pleasure or gain, which will jeopardize this social and secular accumulation.

The fossil strata show us that nature began with rudimental forms, and rose to the more complex, as fast as the earth was fit for their dwelling-place; and that the lower perish, as the higher appear. Very few of our race can be said to be yet finished men. We still carry sticking to us some remains of the preceding inferior quadruped organization. We call these millions men; but they are not yet men. Half-engaged in

and joy; if Want with his scourge; if War with his cannon-ade; if Christianity with its charity; if Trade with its money; if Art with its portfolios; if Science with her telegraphs through the deeps of space and time—can set his dull nerves throbbing, and, by loud taps on the tough chrysalis, can break its walls, and let the new creature emerge erect and free,—make way, and sing psalm! The age of the quadruped is to go out,—the age of the brain and of the heart is to come in. The time will come when the evil forms we have known can no more be organized. Man's culture can spare nothing, wants all the material. He is to convert all impediments into instruments, all enemies into power. The formidable mischief will only make the more useful slave. And if one shall read the future of the race hinted in the organic effort of nature to mount and meliorate, and the corresponding impulse to the better in the human being, we shall dare affirm that there is nothing he will not overcome and convert, until at last culture shall absorb the chaos and gehenna. He will convert the Furies into Muses, and the hells into benefit.

V.—BEHAVIOUR.

Grace, Beauty, and Caprice
Build this golden portal;
Graceful women, chosen men,
Dazzle every mortal:
Their sweet and lofty countenance
His enchanting food;
He need not go to them, their forms
Beset his solitude.
He looketh seldom in their face,
His eyes explore the ground,
The green grass is a looking-glass
Whereon their traits are found.
Little he says to them,
So dances his heart in his breast,
Their tranquil mien bereaveth him
Of wit, of words, of rest.
Too weak to win, too fond to shun
The tyrants of his doom,
The much-deceived Endymion
Slips behind a tomb.

THE soul which animates nature is not less significantly published in the figure, movement, and gesture of animated bodies, than in its last vehicle of articulate speech.

This silent and subtile language is Manners; not *what*, but *how*. Life expresses. A statue has no tongue, and needs none. Good tableaux do not need declamation. Nature tells every secret once. Yes, but in man she tells it all the time, by form, attitude, gesture, mien, face, and parts of the face, and by the whole action of the machine. The visible carriage or action of the individual, as resulting from his organization and his will combined, we call manners. What are they but thought entering the hands and feet, controlling the movements of the body, the speech and behaviour?

There is always a best way of doing everything, if it be to boil an egg. Manners are the happy ways of doing things; each once a stroke of genius or of love,—now repeated and hardened into usage. They form at last a rich varnish, with which the routine of life is washed, and its details adorned. If they are superficial, so are the dew-drops which give such a depth to the morning meadows. Manners are very communicable: men catch them from each other. Consuelo, in the romance, boasts of the lessons she had given the nobles in manners, on the stage: and, in real life, Talma taught Napoleon the arts of behaviour. Genius invents fine manners, which the baron and the baroness copy very fast, and, by the advantage of a palace, better the instruction. They stereotype the lesson they have learned into a mode.

The power of manners is incessant,—an element as uncealable as fire. The nobility cannot in any country be disguised, and no more in a republic or a democracy than in a kingdom. No man can resist their influence. There are certain manners which are learned in good society, of that force, that, if a person have them, he or she must be considered, and is everywhere welcome, though without beauty, or wealth, or genius. Give a boy address and accomplishments, and you give him the mastery of palaces and fortunes where he goes. He has not the trouble of earning or owning them; they solicit him to enter and possess. We send girls of a timid, retreating disposition to the boarding-school, to the riding-school, to the ballroom, or wheresoever they can come into acquaintance and nearness of leading persons of their own sex; where they might learn address, and see it near at hand. The power of a woman of fashion to lead, and also to daunt and repel, derives from their belief that she knows resources and behaviours not known to them; but when these have mastered her secret, they learn to confront her, and recover their self-possession.

Every day bears witness to their gentle rule. People who would obtrude, now do not obtrude. The mediocre circle learns to demand that which belongs to a high state of nature or of culture. Your manners are always under examination.

when you least think of it.

We talk much of utilities,—but 'tis our manners that associate us. In hours of business, we go to him who knows, or has, or does this or that which we want, and we do not let our taste or feeling stand in the way. But this activity over, we return to the indolent state, and wish for those we can be at ease with; those who will go where we go, whose manners do not offend us, whose social tone chimes with ours. When we reflect on their persuasive and cheering force; how they recommend, prepare, and draw people together; how, in all clubs, manners make the members; how manners make the fortune of the ambitious youth; that, for the most part, his manners marry him, and, for the most part, he marries manners; when we think what keys they are, and to what secrets; what high lessons and inspiring tokens of character they convey; and what divination is required in us, for the reading of this fine telegraph, we see what range the subject has, and what relations to convenience, power, and beauty.

Their first service is very low,—when they are the minor morals: but 'tis the beginning of civility,—to make us, I mean, endurable to each other. We prize them for their rough-plastic, abstergent force; to get people out of the quadruped state; to get them washed, clothed, and set up on end; to slough their animal husks and habits; compel them to be clean; overawe their spite and meanness, teach them to stifle the base, and choose the generous expression, and make them know how much happier the generous behaviours are.

Bad behaviour the laws cannot reach. Society is invested with rude, cynical, restless, and frivolous persons who prey upon the rest, and whom a public opinion concentrated into good manners, forms accepted by the sense of all, can reach;—the contradictors and railers at public and private tables, who are like terriers, who conceive it the duty of a dog of honour to growl at any passer-by, and do the honours of the house by barking him out of sight:—I have seen men who neigh like a horse when you contradict them, or say something which they do not understand:—then the overbold, who make their own invitation to your hearth; the persevering talker, who gives you his society in large, saturating doses; the pitiers of themselves,—a perilous class; the frivolous Asmodeus, who relies on you to find him in ropes of sand to twist; the monotones; in short, every stripe of absurdity;—these are social infictions which the magistrate cannot cure or defend you from, and which must be intrusted to the restraining force of custom.

and proverbs, and familiar rules of behaviour impressed on young people in their school-days.

In the hotels on the banks of the Mississippi, they print, or used to print, among the rules of the house, that "No gentleman can be permitted to come to the public table without his coat;" and in the same country, in the pews of the churches, little placards plead with the worshipper against the fury of expectoration. Charles Dickens self-sacrificingly undertook the reformation of our American manners in unspeakable particulars. I think the lesson was not quite lost; that it held bad manners up, so that the churls could see the deformity. Unhappily, the book had its own deformities. It ought not to need to print in a reading room a caution to strangers not to speak loud; nor to persons who look over fine engravings, that they should be handled like cobwebs and butterflies' wings; nor to persons who look at marble statues, that they shall not smite them with canes. But, even in the perfect civilization of this city, such cautions are not quite needless in the Athenæum and City Library.

Manners are factitious, and grow out of circumstances as well as out of character. If you look at the pictures of patriots and of peasants, of different periods and countries, you will see how well they match the same classes in our towns. The modern aristocrat not only is well drawn in Titian's Venetian doges, and in Roman coins and statues, but also in the pictures which Commodore Perry brought home of dignitaries in Japan. Broad lands and great interests not only arrive to such heads as can manage them, but form manners of power. A keen eye, too, will see nice gradations of rank, or see in the manners the degree of homage the party is wont to receive. A prince who is accustomed every day to be courted and deferred to by the highest grandees, acquires a corresponding expectation, and a becoming mode of receiving and replying to this homage.

There are always exceptional people and modes. English grandees affect to be farmers. Claverhouse is a fop, and, under the finish of dress, and levity of behaviour, hides the terror of his war. But Nature and Destiny are honest, and never fail to leave their mark, to hang out a sign for each and for every quality. It is much to conquer one's face, and perhaps the ambitious youth thinks he has got the whole secret when he has learned that disengaged manners are commanding. Don't be deceived by a facile exterior. Tender men sometimes have strong wills. We had, in Massachusetts, an old statesman, who had sat all his life in courts and in chairs of state, without overcoming an extreme irritability of face, voice, and bearing: when he spoke, his voice would not serve him; it cracked, it

indignation. When he sat down, after speaking, he seemed in a sort of fit, and held on to his chair with both hands: but underneath all this irritability was a puissant will, firm and advancing, and a memory in which lay in order and method, like geologic strata, every fact of his history, and under the control of his will.

Manners are partly factitious, but, mainly, there must be capacity for culture in the blood. Else all culture is vain. The obstinate prejudice in favour of blood, which lies at the base of the feudal and monarchical fabrics of the old world, has some reason in common experience. Every man,—mathe-
matician, artist, soldier, or merchant,—looks with confidence for some traits and talents in his own child, which he would not dare to presume in the child of a stranger. The Orientalists are very orthodox on this point. "Take a thorn-bush," said the emir Abdel-Kader, "and sprinkle it for a whole year with water, it will yield nothing but thorns. Take a date-tree, leave it without culture, and it will always produce dates. Nobility is the date-tree, and the Arab populace is a bush of thorns."

A main fact in the history of manners is the wonderful expressiveness of the human body. If it were made of glass, or of air, and the thoughts were written on steel tablets within, it could not publish more truly its meaning than now. Wise men read very sharply all your private history in your look and gait and behaviour. The whole economy of nature is bent on expression. The tell-tale body is all tongues. Men are like Geneva watches with crystal faces which expose the whole movement. They carry the liquor of life flowing up and down in these beautiful bottles, and announcing to the curious how it is with them. The face and eyes reveal what the spirit is doing, how old it is, what aims it has. The eyes indicate the antiquity of the soul, or through how many forms it has already ascended. It almost violates the proprieties, if we say above the breath here what the confessing eyes do not hesitate to utter to every street passenger.

Man cannot fix his eye on the sun, and so far seems imperfect. In Siberia, a late traveller found men who could see the satellites of Jupiter with their unarmed eye. In some respects the animals excel us. The birds have a longer sight, beside the advantage by their wings of a higher observatory. A cow can bid her calf, by secret signal, probably of the eye, to run away, or to lie down and hide itself. The jockeys say of certain horses, that "they look over the whole ground." The out-door life, and hunting, and labour, give equal vigour to

the human eye. A farmer looks out at you as strong as the horse; his eye-beam is like the stroke of a staff. An eye can threaten like a loaded and levelled gun, or can insult like hissing or kicking; or, in its altered mood, by beams of kindness, it can make the heart dance with joy.

The eye obeys exactly the action of the mind. When a thought strikes us, the eyes fix, and remain gazing at a distance; in enumerating the names of persons or of countries, as France, Germany, Spain, Turkey, the eyes wink at each new name. There is no nicety of learning sought by the mind, which the eyes do not vie in acquiring. "An artist," said Michael Angelo, "must have his measuring tools not in the hand, but in the eye;" and there is no end to the catalogue of its performances, whether in indolent vision (that of health and beauty) or in strained vision (that of art and labour).

Eyes are bold as lions,—roving, running, leaping, here and there, far and near. They speak all languages. They wait for no introduction; they are no Englishmen; ask no leave of age or rank; they respect neither poverty nor riches, neither learning nor power, nor virtue, nor sex, but intrude, and come again, and go through and through you, in a moment of time. What inundation of life and thought is discharged from one soul into another through them! The glance is natural magic. The mysterious communication established across a house between two entire strangers moves all the springs of wonder. The communication by the glance is in the greatest part not subject to the control of the will. It is the bodily symbol of identity of nature. We look into the eyes to know if this other form is another self, and the eyes will not lie, but make a faithful confession what inhabitant is there. The revelations are sometimes terrific. The confession of a low, usurping devil is there made, and the observer shall seem to feel the stirring of owls, and bats, and horned hoofs, where he looked for innocence and simplicity. 'Tis remarkable, too, that the spirit that appears at the windows of the house does at once invest himself in a new form of his own to the mind of the beholder.

The eyes of men converse as much as their tongues, with the advantage, that the ocular dialect needs no dictionary, but is understood all the world over. When the eyes say one thing, and the tongue another, a practised man relies on the language of the first. If the man is off his centre, the eyes show it. You can read in the eyes of your companion, whether your argument hits him, though his tongue will not confess it. There is a look by which a man shows he is going to say a good thing, and a look when he has said it. Vain and forgotten are all the fine offers and offices of hospitality, if there

nothing, and no important remark has been addressed to him, and yet, if in sympathy with the society he shall not have a sense of this fact, such a stream of life has been flowing into him, and out from him, through the eyes. There are eyes, to be sure, that give no more admission into the man than blueberries. Others are liquid and deep,—wells that a man might fall into;—others are aggressive and devouring, seem to call out the police, take all too much notice, and require crowded Broadways, and the security of millions, to protect individuals against them. The military eye I meet, now darkly sparkling under clerical, now under rustic brows. 'Tis the city of Lacedæmon; 'tis a stack of bayonets. There are asking eyes, asserting eyes, prowling eyes; and eyes full of fate,—some of good, and some of sinister omen. The alleged power to charm down insanity, or ferocity in beasts, is a power behind the eye. It must be a victory achieved in the will before it can be signified in the eye. 'Tis very certain that each man carries in his eye the exact indication of his rank in the immense scale of men, and we are always learning to read it. A complete man should need no auxiliaries to his personal presence. Whoever looked on him would consent to his will, being certified that his aims were generous and universal. The reason why men do not obey us, is because they see the mud at the bottom of our eye.

If the organ of sight is such a vehicle of power, the other features have their own. A man finds room in the few square inches of the face for the traits of all his ancestors; for the expression of all his history, and his wants. The sculptor, and Winckelmann, and Lavater, will tell you how significant a feature is the nose; how its forms express strength or weakness of will, and good or bad temper. The nose of Julius Cæsar, of Dante, and of Pitt, suggest "the terrors of the beak." What refinement, and what limitations, the teeth betray! "Beware you don't laugh," said the wise mother, "for then you show all your faults."

Balzac left in manuscript a chapter, which he called "*Théorie de la démarche*," in which he says: "The look, the voice, the respiration, and the attitude or walk, are identical. But, as it has not been given to man, the power to stand guard, at once, over these four different simultaneous expressions of his thought, watch that one which speaks out the truth, and you will know the whole man."

Palaces interest us mainly in the exhibition of manners, which, in the idle and expensive society dwelling in them, are

raised to a high art. The maxim of courts is, that **manner is power**. A calm and resolute bearing, a polished speech, an embellishment of trifles, and the art of hiding all uncomfortable feeling, are essential to the courtier: and Saint Simon, and Cardinal de Retz, and Raderer, and an encyclopædia of *Mémoires*, will instruct you, if you wish, in those potent secrets. Thus, it is a point of pride with kings to remember faces and names. It is reported of one prince, that his head had the air of leaning downwards, in order not to humble the crowd. There are people who come in ever like a child with a piece of good news. It was said of the late Lord Holland, that he always came down to breakfast with the air of a man who had just met with some signal good-fortune. In "Notre Dame," the grandee took his place on the dais, with the look of one who is thinking of something else. But we must not peep and eavesdrop at palace-doors.

Fine manners need the support of fine manners in others. A scholar may be a well-bred man, or he may not. The enthusiast is introduced to polished scholars in society, and is chilled and silenced by finding himself not in their element. They all have somewhat which he has not, and, it seems, ought to have. But if he finds the scholar apart from his companions, it is then the enthusiast's turn, and the scholar has no defence, but must deal on his terms. Now they must fight the battle out on their private strengths. What is the talent of that character so common,—the successful man of the world,—in all marts, senates, and drawing-rooms? Manners: manners of power; sense to see his advantage, and manners up to it. See him approach his man. He knows that troops behave as they are handled at first;—that is his cheap secret; just what happens to every two persons who meet on any affair,—one instantly perceives that he has the key of the situation, that his will comprehends the other's will, as the cat does the mouse; and he has only to use courtesy, and furnish good-natured reasons to his victim to cover up the chain, lest he be shamed into resistance.

The theatre in which this science of manners has a formal importance is not with us a court, but dress-circles, wherein, after the close of the day's business, men and women meet at leisure, for mutual entertainment, in ornamented drawing-rooms. Of course, it has every variety of attraction and merit; but, to earnest persons, to youths or maidens who have great objects at heart, we cannot extol it highly. A well-dressed, talkative company, where each is bent to amuse the other,—yet the high-born Turk who came hither fancied that every woman seemed to be suffering for a chair; that all the talkers were brained and exhausted by the deoxygenated air: it spoiled

table, shy, and on his guard. The youth looks humble and manly: I choose him. Look on this woman. There is not beauty, nor brilliant sayings, nor distinguished power, to serve you; but all see her gladly; her whole air and impression are healthful. Here come the sentimentalists, and the invalids. Here is Elise, who caught cold in coming into the world, and has always increased it since. Here are creep-mouse manners, and thievish manners. "Look at Northcote," said Fuseli; "he looks like a rat that has seen a cat." In the shallow company, easily excited, easily tired, here is the columnar Bernard: the Alleghanies do not express more repose than his behaviour. Here are the sweet following eyes of Cecile: it seemed always that she demanded the heart. Nothing can be more excellent in kind than the Corinthian grace of Gertrude's manners, and yet Blanche, who has no manners, has better manners than she; for the movements of Blanche are the sallies of a spirit which is sufficient for the moment, and she can afford to express every thought by instant action.

Manners have been somewhat cynically defined to be a contrivance of wise men to keep fools at a distance. Fashion is shrewd to detect those who do not belong to her train, and seldom wastes her attentions. Society is very swift in its instincts, and, if you do not belong to it, resists and sneers at you; or quietly drops you. The first weapon enrages the party attacked; the second is still more effective, but is not to be resisted, as the date of the transaction is not easily found. People grow up and grow old under this infliction, and never suspect the truth, ascribing the solitude which acts on them very injuriously to any cause but the right one.

The basis of good manners is self-reliance. Necessity is the law of all who are not self-possessed. Those who are not self-possessed, obtrude, and pain us. Some men appear to feel that they belong to a Pariah caste. They fear to offend, they bend and apologize, and walk through life with a timid step. As we sometimes dream that we are in a well-dressed company without any coat, so Godfrey acts ever as if he suffered from some mortifying circumstance. The hero should find himself at home, wherever he is; should impart comfort by his own security and good-nature to all beholders. The hero is suffered to be himself. A person of strong mind comes to perceive that for him an immunity is secured so long as he renders to society that service which is native and proper to him,—an immunity from all the observances, yea, and duties, which society so tyrannically imposes on the rank and file of

its members. "Euripides," says Aspasia, "has not the fine manners of Sophocles; but,"—she adds good-humouredly, "the movers and masters of our souls have surely a right to throw out their limbs as carelessly as they please on the world that belongs to them, and before the creatures they have animated."*

Manners require time, as nothing is more vulgar than haste. Friendship should be surrounded with ceremonies and respects, and not crushed into corners. Friendship requires more time than poor busy men can usually command. Here comes to me Roland, with a delicacy of sentiment leading and inwrapping him like a divine cloud or holy ghost. 'Tis a great destitution to both that this should not be entertained with large leisure, but, contrariwise, should be balked by importunate affairs.

But through this lustrous varnish the reality is ever shining. 'Tis hard to keep the *what* from breaking through this pretty painting of the *how*. The core will come to the surface. Strong will and keen perception overpower old manners, and create new; and the thought of the present moment has a greater value than all the past. In persons of character, we do not remark manners, because of their instantaneousness. We are surprised by the thing done, out of all power to watch the way of it. Yet nothing is more charming than to recognise the great style which runs through the actions of such. People masquerade before us in their fortunes, titles, offices, and connections, as academic or civil presidents, or senators, or professors, or great lawyers, and impose on the frivolous, and a good deal on each other, by these fames. At least, it is a point of prudent good manners to treat these reputations tenderly, as if they were merited. But the sad realist knows these fellows at a glance, and they know him; as when in Paris the chief of the police enters a ballroom, so many diamonded pretenders shrink and make themselves as inconspicuous as they can, or give him a supplicating look as they pass. "I had received," said a sybil, "I had received at birth the fatal gift of penetration:"—and these Cassandras are always born.

Manners impress as they indicate real power. A man who is sure of his point, carries a broad and contented expression, which everybody reads. And you cannot rightly train one to an air and manner, except by making him the kind of man of whom that manner is the natural expression. Nature for ever puts a premium on reality. What is done for effect, is seen to be done for effect; what is done for love, is felt to be done for love. A man inspires affection and honour, because he was not lying in wait for these. The things of a man for which we visit him, were done in the dark and the cold. A little integrity

* Lander: *Pericles and Aspasia*.

is better than any career. So deep are the sources of this surface-action, that even the size of your companion seems to vary with his freedom of thought. Not only is he larger, when at ease, and his thoughts generous, but everything around him becomes variable with expression. No carpenter's rule, no rod and chain, will measure the dimensions of any house or house-lot: go into the house: if the proprietor is constrained and deferring, 'tis of no importance how large his house, how beautiful his grounds,—you quickly come to the end of all; but if the man is self-possessed, happy, and at home, his house is deep-founded, indefinitely large and interesting, the roof and dome buoyant as the sky. Under the humblest roof, the commonest person in plain clothes sits there massive, cheerful, yet formidable, like the Egyptian colossi.

Neither Aristotle, nor Leibnitz, nor Junius, nor Champollion has set down the grammar-rules of this dialect, older than Sanscrit; but they who cannot yet read English, can read this. Men take each other's measure when they meet for the first time,—and every time they meet. How do they get this rapid knowledge, even before they speak, of each other's power and dispositions? One would say, that the persuasion of their speech is not in what they say,—or, that men do not convince by their argument,—but by their personality, by who they are, and what they said and did heretofore. A man already strong is listened to, and everything he says is applauded. Another opposes him with sound argument, but the argument is scouted, until by-and-by it gets into the mind of some weighty person; then it begins to tell on the community.

Self-reliance is the basis of behaviour, as it is the guaranty that the powers are not squandered in too much demonstration. In this country, where school education is universal, we have a superficial culture, and a profusion of reading and writing and expression. We parade our nobilities in poems and orations, instead of working them up into happiness. There is a whisper out of the ages to him who can understand it,—“Whatever is known to thyself alone, has always very great value.” There is some reason to believe, that, when a man does not write his poetry, it escapes by other vents through him, instead of the one vent of writing; clings to his form and manners, whilst poets have often nothing poetical about them except their verses. Jacobi said that, “when a man has fully expressed his thought, he has somewhat less possession of it.” One would say, the rule is,—What a man is irresistibly urged to say, helps him and us. In explaining his thought to others, he explains it to himself: but when he opens it for show, it corrupts him.

Society is the stage on which manners are shown; novels

are their literature. Novels are the journal or record of manners; and the new importance of these books derives from the fact, that the novelist begins to penetrate the surface, and treats this part of life more worthily. The novels used to be all alike, and had a quite vulgar tone. The novels used to lead us on to a foolish interest in the fortunes of the boy and girl they described. The boy was to be raised from a humble to a high position. He was in want of a wife and a castle, and the object of the story was to supply him with one or both. We watched sympathetically, step by step, his climbing, until, at last, the point is gained, the wedding day is fixed, and we follow the gala procession home to the castle, when the doors are slammed in our face, and the poor reader is left outside in the cold, not enriched by so much as an idea, or a virtuous impulse.

But the victories of character are instant, and victories for all. Its greatness enlarges all. We are fortified by every heroic anecdote. The novels are as useful as Bibles, if they teach you the secret, that the best of life is conversation, and the greatest success is confidence, or perfect understanding between sincere people. 'Tis a French definition of friendship, *rien que s'entendre*, good understanding. The highest compact we can make with our fellow is,—“Let there be truth between us two for evermore.” That is the charm in all good novels, as it is the charm in all good histories, that the heroes mutually understand, from the first, and deal loyally, and with a profound trust in each other. It is sublime to feel and say of another, I need never meet, or speak, or write to him: we need not reinforce ourselves, or send tokens of remembrance: I rely on him as on myself: if he did thus or thus, I know it was right.

In all the superior people I have met, I notice directness, truth spoken more truly, as if everything of obstruction, of malformation, had been trained away. What have they to conceal? What have they to exhibit? Between simple and noble persons, there is always a quick intelligence: they recognise at sight, and meet on a better ground than the talents and skills they may chance to possess, namely, on sincerity and uprightness. For, it is not what talents or genius a man has, but how he is to his talents, that constitutes friendship and character. The man that stands by himself, the universe stands by him also. It is related of the monk Basle, that, being excommunicated by the Pope, he was, at his death, sent in charge of an angel to find a fit place of suffering in hell; but, such was the eloquence and good-humour of the monk, that, wherever he went, he was received gladly, and civilly treated, even by the most uncivil angels: and, when

and even good angels came from far to see him, and take up their abode with him. The angel that was sent to find a place of torment for him, attempted to remove him to a worse pit, but with no better success; for such was the contented spirit of the monk, that he found something to praise in every place and company, though in hell, and made a kind of heaven of it. At last the escorting angel returned with his prisoner to them that sent him, saying, that no phlegethon could be found that would burn him; for that, in whatever condition, Basle remained incorrigibly Basle. The legend says, his sentence was remitted, and he was allowed to go into heaven, and was canonized as a saint.

There is a stroke of magnanimity in the correspondence of Bonaparte with his brother Joseph, when the latter was King of Spain, and complained that he missed in Napoleon's letters the affectionate tone which had marked their childish correspondence. "I am sorry," replies Napoleon, "you think you shall find your brother again only in the Elysian Fields. It is natural that at forty he should not feel towards you as he did at twelve. But his feelings towards you have greater truth and strength. His friendship has the features of his mind."

How much we forgive to those who yield us the rare spectacle of heroic manners! We will pardon them the want of books, of arts, and even of the gentler virtues. How tenaciously we remember them! Here is a lesson which I brought along with me in boyhood from the Latin School, and which ranks with the best of Roman anecdotes. Marcus Scaurus was accused by Quintus Varius Hispanus, that he had excited the allies to take arms against the Republic. But he, full of firmness and gravity, defended himself in this manner: "Quintus Varius Hispanus alleges that Marcus Scaurus, President of the Senate, excited the allies to arms: Marcus Scaurus, President of the Senate, denies it. There is no witness. Which do you believe, Romans?" "*Utri creditis, Quirites?*" When he had said these words, he was

- absolved by the assembly of the people.

I have seen manners that make a similar impression with personal beauty; that give the like exhilaration, and refine us like that; and, in memorable experiences, they are suddenly better than beauty, and make that superfluous and ugly. But they must be marked by fine perception, the acquaintance with real beauty. They must always show self-control: you shall not be facile, apologetic, or leaky, but king over your word; and every gesture and action shall indicate power at

rest. Then they must be inspired by the good heart. There is no beautifier of complexion, or form, or behaviour, like the wish to scatter joy and not pain around us. 'Tis good to give a stranger a meal, or a night's lodging. 'Tis better to be hospitable to his good meaning and thought, and give courage to a companion. We must be as courteous to a man as we are to a picture, which we are willing to give the advantage of a good light. Special precepts are not to be thought of: the talent of well-doing contains them all. Every hour will show a duty as paramount as that of my whim just now; and yet I will write it,—that there is one topic peremptorily forbidden to all well-bred, to all rational mortals, namely, their distempers. If you have not slept, or if you have slept, or if you have headache, or sciatica, or leprosy, or thunder-stroke, I beseech you, by all angels, to hold your peace, and not pollute the morning, to which all the housemates bring serene and pleasant thoughts, by corruption and groans. Come out in the azure. Love the day. Do not leave the sky out of your landscape. The oldest and the most deserving person should come very modestly into any newly awaked company, respecting the divine communications, out of which all must be presumed to have newly come. An old man who added an elevating culture to a large experience of life, said to me, "When you come into the room, I think I will study how to make humanity beautiful to you."

As respects the delicate question of culture, I do not think that any other than negative rules can be laid down. For positive rules, for suggestion, nature alone inspires it. Who dare assume to guide a youth, a maid, to perfect manners?—the golden mean is so delicate, difficult,—say frankly unattainable. What finest hands would not be clumsy to sketch the genial precepts of the young girl's demeanour? The chances seem infinite against success; and yet success is continually attained. There must not be secondariness, and 'tis a thousand to one that her air and manner will at once betray that she is not primary, but that there is some other one or many of her class, to whom she habitually postpones herself. But nature lifts her easily, and without knowing it, over these impossibilities, and we are continually surprised with graces and felicities not only unteachable, but undescribable.

This is he, who, felled by foes,
 Sprung harmless up, refreshed by blows;
 He to captivity was sold,
 But him no prison-bars would hold:
 Though they sealed him in a rock,
 Mountain-chains he can unlock:
 Thrown to lions for their meat
 The crouching lion kissed his feet:
 Bound to the stake, no flames appalled,
 But arched o'er him an honouring vault.
 This is he men miscall Fate,
 Threading dark ways, arriving late,
 But ever coming in time to crown
 The truth, and hurl wrongdoers down.
 He is the oldest, and best known,
 More near than aught thou call'st thy own,
 Yet, greeted in another's eyes,
 Disconcerts with glad surprise—
 This is Jove, who, deaf to prayers,
 Floods with blessings unawares.
 Draw, if thou canst, the mystic line,
 Severing rightly his from thine,
 Which is human, which divine.

SOME of my friends have complained, when the preceding papers were read, that we discussed Fate, Power, and Wealth on too low a platform; gave too much line to the evil spirit of the times; too many cakes to Cerberus; that we ran Cudworth's risk of making, by excess of candour, the argument of atheism so strong, that he could not answer it. I have no fears of being forced in my own despite to play, as we say, the devil's attorney. I have no infirmity of faith; no belief that it is of much importance what I or any man may say: I am sure that a certain truth will be said through me, though I should be dumb, or though I should try to say the reverse. Nor do I fear scepticism for any good soul. A just thinker will allow full swing to his scepticism. I dip my pen in the blackest ink, because I am not afraid of falling into my inkpot. I have no sympathy with a poor man I knew, who, when suicides abounded, told me he dared not look at his razor. We are of different opinions at different hours, but we always may be said to be at heart on the side of truth.

I see not why we should give ourselves such sanctified airs. If the Divine Providence has hid from men neither disease, nor deformity, nor corrupt society, but has stated itself out in

passions, in war, in trade, in the love of power and pleasure, in hunger and need, in tyrannies, literatures, and arts,—let us not be so nice that we cannot write these facts down coarsely as they stand, or doubt but there is a counter-statement as ponderous, which we can arrive at, and which, being put, will make all square. The solar system has no anxiety about its reputation, and the credit of truth and honesty is as safe; nor have I any fear that a sceptical bias can be given by leaning hard on the sides of fate, of practical power, or of trade, which the doctrine of Faith cannot down-weigh. The strength of that principle is not measured in ounces and pounds: it tyrannizes at the centre of Nature. We may well give scepticism as much line as we can. The spirit will return, and fill us. It drives the drivers. It counterbalances any accumulations of power.

“Heaven kindly gave our blood a moral flow.”

We are born loyal. The whole creation is made of hooks and eyes, of bitumen, of sticking-plaster, and whether your community is made in Jerusalem or in California, of saints or of wreckers, it coheres in a perfect ball. Men as naturally make a state, or a church, as caterpillars a web. If they were more refined, it would be less formal, it would be nervous, like that of the Shakers, who, from long habit of thinking and feeling together, it is said, are affected in the same way, at the same time, to work and to play, and as they go with perfect sympathy to their tasks in the field or shop, so are they inclined for a ride or a journey at the same instant, and the horses come up with the family carriage unbespoken to the door.

We are born believing. A man bears beliefs, as a tree bears apples. A self-poise belongs to every particle; and a rectitude to every mind, and is the Nemesis and protector of every society. I and my neighbours have been bred in the notion, that, unless we came soon to some good church,—Calvinism, or Behmenism, or Romanism, or Mormonism,—there would be a universal thaw and dissolution. No Isaiah or Jeremy has arrived. Nothing can exceed the anarchy that has followed in our skies. The stern old faiths have all pulverized. 'Tis a whole population of gentlemen and ladies out in search of religions. 'Tis as flat anarchy in our ecclesiastic realms, as that which existed in Massachusetts in the Revolution, or which prevails now on the slope of the Rocky Mountains or Pike's Peak. Yet we make shift to live. Men are loyal. Nature has self-poise in all her works; certain proportions in which oxygen and azote combine, and, not less a harmony in faculties, a fitness in the spring and the regulator.

The decline of the influence of Calvin, or Fenelon, or Wesley,

or Channing, need give us no uneasiness. The builder of heaven has not so ill constructed his creature as that the religion, that is, the public nature, should fall out: the public and the private element, like north and south, like inside and outside, like centrifugal and centripetal, adhere to every soul, and cannot be subdued, except the soul is dissipated. God builds his temple in the heart on the ruins of churches and religions.

In the last chapters, we treated some particulars of the question of culture. But the whole state of man is a state of culture; and its flowering and completion may be described as religion, or worship. There is always some religion, some hope and fear extended into the invisible,—from the blind boding which nails a horseshoe to the mast or the threshold, up to the song of the Elders in the Apocalypse. But the religion cannot rise above the state of the votary. Heaven always bears some proportion to earth. The god of the cannibals will be a cannibal, of the crusaders a crusader, and of the merchants a merchant. In all ages, souls out of time, extraordinary, prophetic, are born, who are rather related to the system of the world than to their particular age and locality. These announce absolute truths, which, with whatever reverence received, are speedily dragged down into a savage interpretation. The interior tribes of our Indians, and some of the Pacific islanders, flog their gods when things take an unfavourable turn. The Greek poets did not hesitate to let loose their petulant wit on their deities also. Laomedon, in his anger at Neptune and Apollo, who had built Troy for him, and demanded their price, does not hesitate to menace them that he will cut their ears off.* Among our Norse forefathers, King Olaf's mode of converting Eyvind to Christianity was to put a pan of glowing coals on his belly, which burst asunder. "Wilt thou now, Eyvind, believe in Christ?" asks Olaf, in excellent faith. Another argument was an adder put into the mouth of the reluctant disciple Rand, who refused to believe.

Christianity, in the romantic ages, signified European culture,—the grafted or meliorated tree in a crab forest. And to marry a pagan wife or husband, was to marry Beast, and voluntarily, to take a step backwards towards the baboon.

"Hengist had verament
A daughter both fair and gent,
But she was heathen Surazine,
And Vortigern for love fine
Her took to fere and to wife,
And was cursed in all his life;
For he let Christian wed heathen,
And mixed our blood as flesh and mathen." †

* *Iliad*, Book xxi. l. 455.

† Moths or worms

What Gothic mixtures the Christian creed drew from the pagan sources, Richard of Devizes's chronicle of Richard I's crusade, in the twelfth century, may show. King Richard taunts God with forsaking him: "O fie! O how unwilling should I be to forsake thee, in so forlorn and dreadful a position, were I thy lord and advocate, as thou art mine. In sooth, my standards will in future be despised, not through my fault, but through thine: in sooth, not through any cowardice of my warfare, art thou thyself, my king and my God conquered, this day, and not Richard thy vassal." The religion of the early English poets is anomalous, so devout and so blasphemous, in the same breath. Such is Chaucer's extraordinary confusion of heaven and earth in the picture of Dido:

"She was so fair,
So young, so lusty, with her eyes glad,
That if that God that heaven and earth made
Would have a love for beauty and goodness,
And womanhede, truth, and seemliness,
Whom should he love but this lady sweet?
There n' is no woman to him half so meet."

With these grossnesses, we complacently compare our own taste and decorum. We think and speak with more temperance and gradation,—but is not indifferentism as bad as superstition?

We live in a transition period, when the old faiths which comforted nations, and not only so, but made nations, seem to have spent their force. I do not find the religions of men at this moment very creditable to them, but either childish and insignificant, or unmanly and effeminating. The fatal trait is the divorce between religion and morality. Here are nothing religions or churches that proscribe intellect; scortatory religions; slave-holding and slave-trading religions; and, even in the decent populations, idolatries wherein the whiteness of the ritual covers scarlet indulgence. The lover of the old religion complains that our contemporaries, scholars as well as merchants, succumb to a great despair,—have corrupted into a timorous conservatism, and believe in nothing. In our large cities, the population is godless, materialized,—no bond, no fellow-feeling, no enthusiasm. These are not men, but hungers, thirsts, fevers, and appetites walking. How is it people manage to live on,—so aimless as they are? After their peppercorn aims are gained, it seems as if the lime in their bones alone held them together, and not any worthy purpose. There is no faith in the intellectual, none in the moral universe. There is faith in chemistry, in meat and wine, in wealth, in machinery, in the steam-engine, galvanic battery, turbine-wheels, sewing machines, and in public opinion, but not in

divine causes. A silent revolution has loosed the tension of the old religious sects, and, in place of the gravity and permanence of those societies of opinion, they run into freak and extravagance. In creeds never was such levity; witness the heathenisms in Christianity, the periodic "revivals," the Millennium mathematics, the peacock ritualism, the retrogression to Popery, the maundering of Mormons, the squalor of Mesmerism, the delirium of rappings, the rat and mouse revelation, thumps in table-drawers, and black art. The architecture, the music, the prayer, partake of the madness; the arts sink into shift and make-believe. Not knowing what to do, we ape our ancestors; the churches stagger backward to the mummeries of the dark ages. By the irresistible maturing of the general mind, the Christian traditions have lost their hold. The dogma of the mystic offices of Christ being dropped, and he standing on his genius as a moral teacher, 'tis impossible to maintain the whole emphasis of his personality; and it recedes, as all persons must, before the sublimity of the moral laws. From this change, and in the momentary absence of any religious genius that could offset the immense material activity, there is a feeling that religion is gone. When Paul Leroux offered his article "*Dieu*" to the conductor of a leading French journal, he replied, "*La question de Dieu manque d'actualité.*" In Italy, Mr. Gladstone said of the late King of Naples, "it has been a proverb, that he has erected the negation of God into a system of government." In this country, the like stupefaction was in the air, and the phrase "higher law" became a political jibe. What proof of infidelity like the toleration and propagandism of slavery? What like the direction of education? What like the facility of conversion? What like the externality of churches that once sucked the roots of right and wrong, and now have perished away till they are a speck of whitewash on the wall? What proof of scepticism like the base rate at which the highest mental and moral gifts are held? Let a man attain the highest and broadest culture that any American has possessed, then let him die by sea-storm, railroad collision, or other accident, and all America will acquiesce that the best thing has happened to him; that, after the education has gone far, such is the expensiveness of America, that the best use to put a fine person to is, to drown him to save his board.

Another scar of this scepticism is the distrust in human virtue. It is believed by well-dressed proprietors that there is no more virtue than they possess; that the solid portion of society exists for the arts of comfort; that life is an affair to put somewhat between the upper and lower mandibles. How prompt the suggestion of a low motive! Certain patriots in

if he could rouse the New World to a sympathy with European liberty. "Aye," says New York, "he made a handsome thing of it—enough to make him comfortable for life."

See what allowance vice finds in the respectable and well-conditioned class. If a pickpocket intrude into the society of gentlemen, they exert what moral force they have, and he finds himself uncomfortable, and glad to get away. But if an adventurer go through all the forms, procure himself to be elected to a post of trust, as of senator, or president,—though by the same arts as we detest in the house-thief,—the same gentlemen who agree to discountenance the private rogue will be forward to show civilities and marks of respect to the public one: and no amount of evidence of his crimes will prevent them giving him ovations, complimentary dinners, opening their own houses to him, and priding themselves on his acquaintance. We were not deceived by the professions of the private adventurer,—the louder he talked of his honour the faster we counted our spoons; but we appeal to the sanctified preamble of the messages and proclamations of the public sinner, as the proof of sincerity. It must be that they who pay this homage have said to themselves, On the whole, we don't know about this but that you call honesty; a bird in the hand is better.

Even well-disposed, good sort of people are touched with the same infidelity, and for brave, straightforward action use half-measures and compromises. Forgetful that a little measure is a great error, forgetful that a wise mechanic uses a sharp tool, they go on choosing the dead men of routine. But the official men can in nowise help you in any question of to-day, they deriving entirely from the old dead things. Only those can help in counsel or conduct who did not make a party pledge to defend this or that, but who were appointed by God Almighty, before they came into the world, to stand for this which they uphold.

It has been charged that a want of sincerity in the leading men is a vice general throughout American society. But the multitude of the sick shall not make us deny the existence of health. In spite of our imbecility and terrors, and "universal decay of religion," &c. &c., the moral sense reappears to-day with the same morning newness that has been from of old the fountain of beauty and strength. You say, there is no religion now. 'Tis like saying in rainy weather, there is no sun, when at that moment we are witnessing one of his superlative effects. The religion of the cultivated class now, to be sure, consists in

B4

basis of things, which all speech aims to say, and all action to evolve, a simple, quiet, undescribed, undescribable presence, dwelling very peacefully in us, our rightful lord: we are not to do, but to let do; not to work, but to be worked upon; and to this homage there is a consent of all thoughtful and just men in all ages and conditions. To this sentiment belong vast and sudden enlargements of power. 'Tis remarkable that our faith in ecstasy consists with total inexperience of it. It is the order of the world to educate with accuracy the senses and the understanding; and the enginery at work to draw out these powers in priority, no doubt, has its office. But we are never without a hint that these powers are mediate and servile, and that we are one day to deal with real being,—essences with essences. Even the fury of material activity has some results friendly to moral health. The energetic action of the times develops individualism, and the religious appear isolated. I esteem this a step in the right direction. Heaven deals with us on no representative system. Souls are not saved in bundles. The Spirit saith to the man, "How is it with thee? thee personally? is it well? is it ill?" For a great nature, it is a happiness to escape a religious training,—religion of character is so apt to be invaded. Religion must always be a crab fruit: 't cannot be grafted and keep its wild beauty. "I have seen," said a traveller who had known the extremes of society, "I have seen human nature in all its forms; it is everywhere the same; but the wilder it is, the more virtuous."

We say, the old forms of religion decay, and that a scepticism devastates the community. I do not think it can be cured or stayed by any modification of theologic creeds, much less by theologic discipline. The cure for false theology is mother-wit. Forget your books and traditions, and obey your moral perceptions at this hour. That which is signified by the words "moral" and "spiritual," is a lasting essence, and, with whatever illusions we have loaded them, will certainly bring back the words, age after age, to their ancient meaning. I know no words that mean so much. In our definitions, we grope after the *spiritual* by describing it as invisible. The true meaning of *spiritual* is *real*; that law which executes itself, which works without means, and which cannot be conceived as not existing. Men talk of "mere morality,"—which is much as if one should say, "Poor God, with nobody to help him." I find the omnipresence and the almightiness in the reaction of every atom in nature. I can best indicate by examples those reactions by which every part of nature replies to the purpose of the *ac* or

mind. But a day comes when he begins to care that he do not cheat his neighbour. Then all goes well. He has changed his market-cart into a chariot of the sun. What a day dawns, when we have taken to heart the doctrine of faith! to prefer, as a better investment, being to doing; being to seeming; logic to rhythm and to display; the year to the day; the life to the year; character to performance;—and have come to know that justice will be done us; and, if our genius is slow, the term will be long.

'Tis certain that worship stands in some commanding relation to the health of man, and to his highest powers, so as to be, in some manner, the source of intellect. All the great ages have been ages of belief. I mean, when there was any extraordinary power of performance, when great national movements began, when arts appeared, when heroes existed, when poems were made, the human soul was in earnest, and had fixed its thoughts on spiritual verities, with as strict a grasp as that of the hands on the sword, or the pencil, or the trowel. It is true that genius takes its rise out of the mountains of rectitude; that all beauty and power which men covet, are somehow born out of that Alpine district; that any extraordinary degree of beauty in man or woman involves a moral charin. Thus, I think, we very slowly admit in another man a high^{er} degree of moral sentiment than our own,—a finer conscience, more impressionable, or, which marks minuter degrees; an ear to hear acuter notes of right and wrong than we can. I think we listen suspiciously and very slowly to any evidence to that point. But, once satisfied of such superiority, we set no limit to our expectation of his genius. For such persons are nearer to the secret of God than others; are bathed by sweeter waters; they hear notices, they see visions, where others are vacant. We believe that holiness confers a certain insight, because not by our private, but by our public force, can we share and know the nature of things.

There is an intimate interdependence of intellect and morals. Given the equality of two intellects,—which will form the most reliable judgments, the good or the bad hearted? "The heart has its arguments, with which the understanding is not acquainted." For the heart is at once aware of the state of health or disease, which is the controlling state, that is, of sanity or of insanity, prior, of course, to all question of the ingenuity of arguments, the amount of facts or the elegance

extraordinary blunders, and final wrong head, into which men spoiled by ambition usually fall. Hence the remedy for all blunders, the cure of blindness, the cure of crime, is love. "As much love, so much mind," said the Latin proverb. The superiority that has no superior; the redeemer and instructor of souls, as it is their primal essence, is love.

The moral must be the measure of health. If your eye is on the eternal, your intellect will grow, and your opinions and actions will have a beauty which no learning or combined advantages of other men can rival. The moment of your loss of faith, and acceptance of the lucrative standard, will be marked in the pause, or solstice of genius, the sequent retrogression, and the inevitable loss of attraction to other minds. The vulgar are sensible of the change in you, and of your descent, though they clap you on the back, and congratulate you on your increased common sense.

Our recent culture has been in natural science. We have learned the manners of the sun and of the moon, of the rivers and the rains, of the mineral and elemental kingdoms, of plants and animals. Man has learned to weigh the sun, and its weight neither loses nor gains. The path of a star, the moment of an eclipse, can be determined to the fraction of a second. Well, to him the book of history, the book of love, the lures of passion, and the commandments of duty are opened: and the next lesson taught is, the continuation of the inflexible law of matter into the subtle kingdom of will, and of thought; that if, in sidereal ages, gravity and projection keep their craft, and the ball never loses its way in its wild path through space,—a secret gravitation, a secret projection, rule not less tyrannically in human history, and keep the balance of power from age to age unbroken. For, though the new element of freedom and an individual has been admitted, yet the primordial atoms are prefigured and predetermined to moral issues, are in search of justice, and ultimate right is done. Religion or worship is the attitude of those who see this unity, intimacy, and sincerity; who see that, against all appearances, the nature of things works for truth and right for ever.

'Tis a short sight to limit our faith in laws to those of gravity, of chemistry, of botany, and so forth. Those laws do not stop where our eyes lose them, but push the same geometry and chemistry up into the invisible plane of social and rational life, so that, look where we will, in a boy's game, or in the strifes of races a perfect reaction, a perpetual judg-

wise. Strong men believe in cause and effect. The man was born to do it, and his father was born to be the father of him and of this deed, and by looking narrowly, you shall see there was no luck in the matter, but it was all a problem in arithmetic, or an experiment in chemistry. The curve of the flight of the moth is pre-ordained, and all things go by number, rule, and weight.

Scepticism is unbelief in cause and effect. A man does not see that, as he eats, so he thinks: as he deals, so he is, and so he appears; he does not see that his son is the son of his thoughts and of his actions; that fortunes are not exceptions but fruits; that relation and connection are not somewhere and sometimes, but everywhere and always; no miscellany, no exemption, no anomaly,—but method and an even web; and what comes out, that was put in. As we are, so we do; and as we do, so is it done to us; we are the builders of our fortunes; cant and lying and the attempt to secure a good which does not belong to us, are once for all balked and vain. But, in the human mind, this tie of fate is made alive. The law is the basis of the human mind. In us, it is inspiration; out there in nature, we see its fatal strength. We call it the moral sentiment.

We owe to the Hindoo Scriptures a definition of Law, which compares well with any in our Western books. "Law it is, which is without name, or colour, or hands, or feet; which is smallest of the least, and largest of the large: all, and knowing all things; which hears without ears, sees without eyes, moves without feet, and seizes without hands."

If any reader tax me with using vague and traditional phrases, let me suggest to him, by a few examples, what kind of a trust this is, and how real. Let me show him that the dice are loaded; that the colours are fast, because they are the native colours of the fleece; that the globe is a battery, because every atom is a magnet; and that the police and sincerity of the universe are secured by God's delegating his divinity to every particle; that there is no room for hypocrisy, no margin for choice.

The countryman leaving his native village, for the first time, and going abroad, finds all his habits broken up. In a new nation and language, his sect, as Quaker, or Lutheran, is lost. What! it is not then necessary to the order and existence of society? He misses this, and the command-

the discovery that there are no large cities,—none large enough to hide in; that the consors of action are as numerous and as near in Paris, as in Littleton or Portland; that the gossip is as prompt and vengeful. There is no concealment, and, for each offence, a several vengeance; that reaction, or *nothing for nothing, or things are as broad as they are long*, is not a rule for Littleton or Portland, but for the universe.

We cannot spare the coarsest muniment of virtue. We are disgusted by gossip; yet it is of importance to keep the angels in their proprieties. The smallest fly will draw blood, and gossip is a weapon impossible to exclude from the privatest, highest, selectest. Nature created a police of many ranks. God has delegated himself to a million deputies. From these low external penalties the scale ascends. Next come the resentments, the fears, which injustice calls out; then the false relations in which the offender is put to other men; and the reaction of his fault on himself, in the solitude and devastation of his mind.

You cannot hide any secret. If the artist succour his flagging spirits by opium or wine, his work will characterize itself as the effect of opium or wine. If you make a picture or a statue, it sets the beholder in that state of mind you had when you made it. If you spend for show, on building or gardening, or on pictures, or on equipages, it will so appear. We are all physiognomists and penetrators of character, and things themselves are detective. If you follow the suburban fashion in building a sumptuous-looking house for a little money, it will appear to all eyes as a cheap dear house. There is no privacy that cannot be penetrated. No secret can be kept in the civilized world. Society is a masked ball, where every one hides his real character, and reveals it by hiding. If a man wish to conceal anything he carries, those whom he meets know that he conceals somewhat, and usually know what he conceals. Is it otherwise if there be some belief or some purpose he would bury in his breast? 'Tis as hard to hide as fire. He is a strong man who can hold down his opinion. A man cannot utter two or three sentences without disclosing to intelligent ears precisely where he stands in life and thought, namely, whether in the kingdom of the senses and the understanding, or in that of ideas and imagination, in the realm of intuitions and duty. People seem not to see that their opinion of the world is also a confession of character. We can only see what we are, and if we misbehave we suspect others. The fame of Shakespeare or of Voltaire, of

happy, in seeing these, he can feel that he has better muskets and pikes in his energy and constancy. To every creature is his own weapon, however skilfully concealed from himself a good while. His work is sword and shield. Let him accuse none, let him injure none. The way to mend the bad world is to create the right world. Here is a low political economy plotting to cut the throat of foreign competition, and establish our own;—excluding others by force, or making war on them; or, by cunning tariffs, giving preference to worse wares of ours. But the real and lasting victories are those of peace, and not of war. The way to conquer the foreign artisan, is, not to kill him, but to beat his work. And the Crystal Palaces and World Fairs, with their committees and prizes on all kinds of industry, are the result of this feeling. The American workman who strikes ten blows with his hammer, whilst the foreign workman only strikes one, is as really vanquishing that foreigner as if the blows were aimed at and told on his person. I look on that man as happy, who, when there is question of success, looks into his work for a reply, not into the market, not into opinion, not into patronage. In every variety of human employment, in the mechanical and in the fine arts, in navigation, in farming, in legislating, there are among the numbers who do their task perfunctorily, as we say, or just to pass, and as badly as they dare,—there are the working men, on whom the burden of the business falls,—those who love work, and love to see it rightly done, who finish their task for its own sake; and the state and the world is happy that has the most of such finishers. The world will always do justice at last to such finishers: it cannot otherwise. He who has acquired the ability, may wait securely the occasion of making it felt and appreciated, and know that it will not loiter. Men talk as if victory were something fortunate. Work is victory. Wherever work is done, victory is obtained. There is no chance, and no blanks. You want but one verdict: if you have your own, you are secure of the rest. And yet, if witnesses are wanted, witnesses are near. There was never a man born so wise or good, but one or more companions came into the world with him, who delight in his faculty and report it. I cannot see without awe, that no man thinks alone, and no man acts alone, but the divine assessors who came up with him into life,—now under one disguise, now under another,—like a police in citizens' clothes, walk with him, step for step through all the kingdom of time.

action. Use what language you will, you can never say anything but what you are. What I am, and what I think, is conveyed to you, in spite of my efforts to hold it back. What I am has been secretly conveyed from me to another, whilst I was vainly making up my mind to tell him it. He has heard from me what I never spoke.

As men get on in life, they acquire a love for sincerity, and somewhat less solicitude to be lulled or amused. In the progress of the character, there is an increasing faith in the moral sentiment, and a decreasing faith in propositions. Young people admire talents, and particular excellences. As we grow older, we value total powers and effects, as the spirit, or quality of the man. We have another sight, and a new standard; an insight which disregards what is done *for* the eye, and pierces to the doer; an ear which hears not what men say, but hears what they do not say.

There was a wise devout man, who is called, in the Catholic Church, St. Philip Neri, of whom many anecdotes touching his discernment and benevolence are told at Naples and Rome. Among the nuns in a convent not far from Rome, one had appeared, who laid claim to certain rare gifts of inspiration and prophecy, and the abbess advised the Holy Father, at Rome, of the wonderful powers shown by her novice. The Pope did not well know what to make of these new claims, and Philip coming in from a journey one day, he consulted him. Philip undertook to visit the nun, and ascertain her character. He threw himself on his mule, all travel-soiled as he was, and hastened through the mud and mire to the distant convent. He told the abbess the wishes of his Holiness, and begged her to summon the nun without delay. The nun was sent for, and, as soon as she came into the apartment, Philip stretched out his leg all bespattered with mud, and desired her to draw off his boots. The young nun, who had become the object of much attention and respect, drew back with anger, and refused the office. Philip ran out of doors, mounted his mule, and returned instantly to the Pope: "Give yourself no uneasiness, Holy Father, any longer: here is no miracle, for here is no humility."

We need not much mind what people please to say, but what they must say; what their natures say, though their busy, artful, Yankee understandings try to hold back, and choke that word, and to articulate something different. If we will sit quietly,—what they ought to say is said, with their will, or against their will. We do not care for you, let us pretend

reasons which their parents give to their questions, whether touching natural facts, or religion, or persons. When the parent, instead of thinking how it really is, puts them off with a traditional or a hypocritical answer, the children perceive that it is traditional or hypocritical. To a sound constitution the defect of another is at once manifest: and the marks of it are only concealed from us by our own dislocation. An anatomical observer remarks, that the sympathies of the chest, abdomen, and pelvis, tell at last on the face, and on all its features. Not only does our beauty waste, but it leaves word how it went to waste. Physiognomy and phrenology are not new sciences, but declarations of the soul that it is aware of certain new sources of information. And now sciences of broader scope are starting up behind these. And so for ourselves, it is really of little importance what blunders in statement we make, so only we make no wilful departures from the truth. How a man's truth comes to mind, long after we have forgotten all his words! How it comes to us in silent hours, that truth is our only armour in all passages of life and death! Wit is cheap, and anger is cheap; but if you cannot argue or explain yourself to the other party, cleave to the truth against me, against thee, and you gain a station from which you cannot be dislodged. The other party will forget the words that you spoke, but the part you took continues to plead for you.

Why should I hasten to solve every riddle which life offers me? I am well assured that the Questioner, who brings me so many problems, will bring the answers also in due time. Very rich, very potent, very cheerful Giver that he is, he shall have it all his own way, for me. Why should I give up my thought, because I cannot answer an objection to it? Consider only, whether it remains in my life the same it was. That only which we have within, can we see without. If we meet no gods, it is because we harbour none. If there is grandeur in you, you will find grandeur in porters and sweeps. He only is rightly immortal, to whom all things are immortal. I have read somewhere, that none is accomplished, so long as any are incomplete; that the happiness of one cannot consist with the misery of any other.

The Buddhists say, "No seed will die:" every seed will grow. Where is the service which can escape its remuneration? What is vulgar, and the essence of all vulgarity, but the avarice of reward? 'Tis the difference of artisan and artist,

He is great, whose eyes are opened to see that the reward of actions cannot be escaped, because he is transformed into his action, and taketh its nature, which bears its own fruit, like every other tree. A great man cannot be hindered of the effect of his act, because it is immediate. The genius of life is friendly to the noble, and in the dark brings them friends from far. Fear God, and where you go men shall think they walk in hallowed cathedrals.

And so I look on those sentiments which make the glory of the human being, love, humility, faith, as being also the intimacy of Divinity in the atoms; and that, as soon as the man is right, assurances and provisions emanate from the interior of his body and his mind; as, when flowers reach their ripeness, incense exhales from them, and as a beautiful atmosphere is generated from the planet by the averaged emanations from all its rocks and soils.

Thus man is made equal to every event. He can face danger for the right. A poor, tender, painful body, he can run into flame or bullets or pestilence, with duty for his guide. He feels the insurance of a just employment. I am not afraid of accident, as long as I am in my place. It is strange that superior persons should not feel that they have some better resistance against cholera, than avoiding green peas and salads. Life is hardly respectable,—is it? if it has no generous, guaranteeing task, no duties or affections, that constitute a necessity of existing. Every man's task is his life-preserver. The conviction that his work is dear to God and cannot be spared, defends him. The lightning-rod that disarms the cloud of its threat is his body in its duty. A high aim reacts on the means, on the days, on the organs of the body. A high aim is curative, as well as arnica. "Napoleon," says Goethe, "visited those sick of the plague, in order to prove that the man who could vanquish fear, could vanquish the plague also; and he was right. 'Tis incredible what force the will has in such cases: it penetrates the body, and puts it in a state of activity, which repels all hurtful influences; whilst fear invites them."

It is related of William of Orange, that, whilst he was besieging a town on the continent, a gentleman sent to him on public business came to his camp, and, learning that the King was before the walls, he ventured to go where he was. He found him directing the operation of his gunners, and having explained his errand, and received his answer, the King said, "Do you not know, sir, that every moment you spend here is at the risk of your life?" "I run no more risk," replied the

gentleman, "than your Majesty." "Yes," said the King, "but my duty brings me here, and yours does not." In a few minutes, a cannon-ball fell on the spot, and the gentleman was killed.

Thus can the faithful student reverse all the warnings of his early instinct, under the guidance of a deeper instinct. He learns to welcome misfortune, learns that adversity is the prosperity of the great. He learns the greatness of humility. He shall work in the dark, work against failure, pain, and ill-will. If he is insulted, he can be insulted; all his affair is not to insult. Hafiz writes:

"At the last day, men shall wear
On their heads the dust,
As ensign and as ornament
Of their lowly trust."

The moral equalizes all; enriches, empowers all. It is the coin which buys all, and which all find in their pocket. Under the whip of the driver, the slave shall feel his equality with saints and heroes. In the greatest destitution and calamity, it surprises man with a feeling of elasticity which makes nothing of loss.

I recall some traits of a remarkable person whose life and discourse betrayed many inspirations of this sentiment. Benedict was always great in the present time. He had hoarded nothing from the past, neither in his cabinets, neither in his memory. He had no designs on the future, neither for what he should do to men, nor for what men should do for him. He said, "I am never beaten until I know that I am beaten. I meet powerful brutal people to whom I have no skill to reply. They think they have defeated me. It is so published in society, in the journals; I am defeated in this fashion, in all men's sight, perhaps on a dozen different lines. My ledger may show that I am in debt, cannot yet make my ends meet, and vanquish the enemy so. My race may not be prospering: we are sick, ugly, obscure, unpopular. My children may be worsted. I seem to fail in my friends and clients, too. That is to say, in all the encounters that have yet chanced, I have not been weaponed for that particular occasion, and have been historically beaten; and yet, I know, all the time, that I have never been beaten; have never yet fought, shall certainly fight, when my hour comes, and shall beat." "A man," says the Vishnu Sarma, "who having well compared his own strength or weakness with that of others, after all doth not know the difference, is easily overcome by his enemies."

"I spent," he said, "ten months in the country. Thick-starred Orion was my only companion. Wherever a squirrel or a bee can go with security, I can go. I ate whatever was set

before me; I touched ivy and dogwood. When I went abroad I kept company with every man on the road, for I knew that my evil and my good did not come from these, but from the Spirit, whose servant I was. For I could not stoop to be a circumstance, as they did, who put their life into their fortune and their company. I would not degrade myself by casting about in my memory for a thought, nor by waiting for one. If the thought come, I would give it entertainment. It should, as it ought, go into my hands and feet; but if it come not spontaneously, it comes not rightly at all. If it can spare me, I am sure I can spare it. It shall be the same with my friends. I will never woo the loveliest. I will not ask any friendship or favour. When I come to my own, we shall both know it. Nothing will be to be asked or to be granted." Benedict went out to seek his friend, and met him on the way; but he expressed no surprise at any coincidences. On the other hand, if he called at the door of his friend, and he was not at home, he did not go again; concluding that he had misinterpreted the intimations.

He had the whim not to make an apology to the same individual whom he had wronged. For this, he said, was a piece of personal vanity; but he would correct his conduct in that respect in which he had faulted, to the next person he should meet. Thus, he said, universal justice was satisfied.

Mira came to ask what she should do with the poor Genesee woman who had hired herself to work for her, at a shilling a day, and, now sickening, was like to be bedridden on her hands. Should she keep her, or should she dismiss her? But Benedict said, "Why ask? One thing will clear itself as the thing to be done, and not another, when the hour comes. Is it a question, whether to put her into the street? Just as much whether to thrust the little Jenny on your arm into the street. The milk and meal you give the beggar will fatten Jenny. Thrust the woman out, and you thrust your babe out of doors, whether it so seem to you or not."

In the Shakers, so called, I find one piece of belief, in the doctrine which they faithfully hold, that encourages them to open their doors to every wayfaring man who proposes to come among them; for, they say, the Spirit will presently manifest to the man himself, and to the society, what manner of person he is, and whether he belongs among them. They do not receive him, they do not reject him. And not in vain have they worn their clay coat, and drudged in their fields, and shuffled in their Bruin dance, from year to year, if they have truly learned thus much wisdom.

Honour him whose life is perpetual victory; him, who, by sympathy with the invisible and real, finds support in labour,

Miracle comes to the miraculous, not to the arithmetician. Talent and success interest me but moderately. The great class, they who affect our imagination, the men who could not make their hands meet around their objects, the rapt, the lost, the fools of ideas,—they suggest what they cannot execute. They speak to the ages, and are heard from afar. The Spirit does not love cripples and malformations. If there ever was a good man, be certain, there was another, and will be more.

And so in relation to that future hour, that spectre clothed with beauty at our curtain by night, at our table by day,—the apprehension, the assurance of a coming change. The race of mankind have always offered at least this implied thanks for the gift of existence,—namely, the terror of its being taken away; the insatiable curiosity and appetite for its continuation. The whole revelation that is vouchsafed us, is, the gentle trust, which, in our experience we find, will cover also with flowers the slopes of this chasm.

Of immortality, the soul, when well employed, is incurious. It is so well, that it is sure it will be well. It asks no questions of the Supreme Power. The son of Antiochus asked his father when he would join battle? "Dost thou fear," replied the King, "that thou only in all the army wilt not hear the trumpet?" 'Tis a higher thing to confide, that, if it is best we should live, we shall live,—'tis higher to have this conviction than to have the lease of indefinite centuries and millenniums and æons. Higher than the question of our duration is the question of our deserving. Immortality will come to such as are fit for it, and he who would be a great soul in future must be a great soul now. It is a doctrine too great to rest on any legend, that is, on any man's experience but our own. It must be proved, if at all, from our own activity and designs, which imply an interminable future for their play.

What is called religion effeminates and demoralizes. Such as you are, the gods themselves could not help you. Men are too often unfit to live, from their obvious inequality to their own necessities, or they suffer from politics, or bad neighbours, or from sickness, and they would gladly know that they were to be dismissed from the duties of life. But the wise instinct asks, "How will death help them?" These are not dismissed when they die. You shall not wish for death out of pusillanimity. The weight of the universe is pressed down on the shoulders of each moral agent to hold him to his task. The

of the universe, Marcus Antoninus summed the whole in a word, "It is pleasant to die, if there be gods; and sad to live, if there be none."

And so I think that the last lesson of life, the choral song which rises from all elements and all angels, is, a voluntary obedience, a necessitated freedom. Man is made of the same atoms as the world is, he shares the same impressions, predispositions, and destiny. When his mind is illuminated, when his heart is kind, he throws himself joyfully into the sublime order, and does, with knowledge, what the stones do by structure.

The religion which is to guide and fulfil the present and coming ages, whatever else it be, must be intellectual. The scientific mind must have a faith, which is science. "There are two things," said Mahomet, "which I abhor, the learned in his infidelities, and the fool in his devotions." Our times are impatient of both, and specially of the last. Let us have nothing now which is not its own evidence. There is surely enough for the heart and imagination in the religion itself. Let us not be pestered with assertions and half-truths, with emotions and snuffe.

There will be a new church founded on moral science, at first cold and naked, a babe in a manger again, the algebra and mathematics of ethical law, the church of men to come, without shawms, or psaltery, or sackbut; but it will have heaven and earth for its beams and rafters; science for symbol and illustration; it will fast enough gather beauty, music, picture, poetry. Was never stoicism so stern and exigent as this shall be? It shall send man home to his central solitude, shame these social, supplicating manners, and make him know that much of the time he must have himself to his friend. He shall expect no co-operation, he shall walk with no companion. The nameless Thought, the nameless Power, the superpersonal Heart,—he shall repose alone on that. He needs only his own verdict. No good fame can help, no bad fame can hurt him. The Laws are his consolers, the good Laws themselves are alive, they know if he have kept them, they animate him with the leading of great duty, and an endless horizon. Honour and fortune exist to him who always recognizes the neighbourhood of the great, always feels himself in the presence of high causes.

Hear what Britisa Merlin sung,
 Of keenest eye and truest tongue.
 Say not, the chiefs who first arrive
 Usurp the seats for which all strive;
 The forefathers this land who found
 Failed to plant the vantage-ground;
 Ever from one who comes to-morrow
 Men wait their good and truth to borrow.
 But wilt thou measure all thy road,
 See thou lift the lightest load.
 Who has little, to him who has less, can spare,
 And thou, Cyndyllan's soul beware
 Ponderous gold and stuffs to bear,
 To falter ere thou thy task fulfil,—
 Only the light-armed climb the hill.
 The richest of all lords is Use,
 And ruddy Health the loftiest Muse.
 Live in the sunshine, swim the sea,
 Drink the wild air's salubrity;
 Where the star Canope shines in May,
 Shepherds are thankful, and nations gay.
 The music that can deepest reach,
 And cure all ill, is cordial speech:
 Mask thy wisdom with delight,
 Toy with the bow, yet hit the white.
 Of all wit's uses, the main one
 Is to live well with who has none.
 Cleave to thine acre; the round year
 Will fetch all fruits and virtues here.
 Fool and foe may harmless roam,
 Loved and lovers bide at home.
 A day for toil, an hour for sport,
 But for a friend is life too short.

ALTHOUGH this garrulity of advising is born with us, I confess that life is rather a subject of wonder, than of didactics. So much fate, so much irresistible dictation from temperament and unknown inspiration enters into it, that we doubt we can say anything out of our own experience whereby to help each other. All the professions are timid and expectant agencies. The priest is glad if his prayers or his sermon meet the condition of any soul; if of two, if of ten, 'tis a signal success. But he walked to the church without any assurance that he knew the distemper, or could heal it. The physician prescribes hesitatingly out of his few resources, the same tonic or sedative to this new and peculiar consti-

tion, which he has applied with various success to a hundred men before. If the patient mends he is glad and surprised. If the lawyer advises the client, and tells his story to the jury, and leaves it with them, and is as gay and as much relieved as the client if it turns out that he has a verdict. The judge weighs the arguments, and puts a brave face on the matter, and, since there must be a decision, decides as he can, and hopes he has done justice, and given satisfaction to the community; but he is only an advocate after all. And so is all life a timid and unskilful spectator. We do what we must, and call it by the best names. We like very well to be praised for our action, but our conscience says, "Not unto us." 'Tis little we can do for each other. We accompany the youth with sympathy, and manifold old sayings of the wise, to the gate of the arena, but 'tis certain that not by strength of ours, or of the old sayings, but only on strength of his own, unknown to us or to any, he must stand or fall. That by which a man conquers in any passage, is a profound secret to every other being in the world, and it is only as he turns his back on us and on all men, and draws on this most private wisdom, that any good can come to him. What we have, therefore, to say of life, is rather description, or, if you please, celebration, than available rules.

Yet vigour is contagious, and whatever makes us either think or feel strongly, adds to our power, and enlarges our field of action. We have a debt to every great heart, to every fine genius; to those who have put life and fortune on the cast of an act of justice; to those who have added new sciences; to those who have refined life by elegant pursuits. 'Tis the fine souls who serve us, and not what is called fine society. Fine society is only a self-protection against the vulgarities of the street and the tavern. Fine society, in the common acceptance, has neither ideas nor aims. It renders the service of a perfumery, or a laundry, not of a farm or factory. 'Tis an exclusion and a precinct. Sydney Smith said, "A few yards in London cement or dissolve friendship." It is an unprincipled decorum; an affair of clean linen and coaches, of gloves, cards, and elegance in trifles. There are other measures of self-respect for a man, than the number of clean shirts he puts on every day. Society wishes to be amused. I do not wish to be amused. I wish that life should not be cheap, but sacred. I wish the days to be as centuries, loaded, fragrant. Now we reckon them as bank-days, by some debt which is to be paid us, or which we are to pay, or some pleasure we are to taste. Is all we have to do to draw the breath in, and blow it out again? Porphyry's definition is better: "Life is that which holds matter together." The babe in arms is

Why should we feel ourselves to be men, unless it be to succeed in everything, everywhere. You must say of nothing, *That is beneath me*, nor feel that anything can be out of your power. Nothing is impossible to the man who can will. *Is that necessary? That shall be*:—this is the only law of success." Whoever said it, this is in the right key. But this is not the tone and genius of the men in the street. In the streets we grow cynical. The men we meet are coarse and torpid. The finest wits have their sediment. What quantities of fribbles, paupers, invalids, epicures, antiquaries, politicians, thieves, and triflers of both sexes, might be advantageously spared! Mankind divides itself into two classes,—benefactors and malefactors. The second class is vast, the first a handful. A person seldom falls sick, but the bystanders are animated with a faint hope that he will die:—quantities of poor lives; of distressing invalids; of cases for a gun. Franklin said, "Mankind are very superficial and dastardly: they begin upon a thing, but, meeting with a difficulty, they fly from it discouraged: but they have capacities, if they would employ them." Shall we then judge a country by the majority, or by the minority? By the minority, surely. 'Tis pedantry to estimate nations by the census, or by square miles of land, or other than by their importance to the mind of the time.

Leave this hypocritical prating about the masses. Masses are rude, lame, unmade, pernicious in their demands and influence, and need not to be flattered but to be schooled. I wish not to concede anything to them, but to tame, drill, divide, and break them up, and draw individuals out of them. The worst of charity is, that the lives you are asked to preserve are not worth preserving. Masses! the calamity is the masses. I do not wish any mass at all, but honest men only, lovely, sweet, accomplished women only, and no shovel-handed, narrow-brained, gin-drinking million stockingers or lazzaroni at all. If government knew how, I should like to see it check, not multiply, the population. When it reaches its true law of action, every man that is born will be hailed as essential. Away with this hurrah of masses, and let us have the considerate vote of single men spoken on their honour and their conscience. In old Egypt, it was established law, that the vote of a prophet be reckoned equal to a hundred hands. I think it was much under-estimated. "Clay and clay differ in dignity," as we discover by our preferences every day. What

or, as if your presence did not tell in more ways than in your vote. Suppose the three hundred heroes at Thermopylæ had paired off with three hundred Persians: would it have been all the same to Greece, and to history? Napoleon was called by his men *Cent Mille*. Add honesty to him, and they might have called him Hundred Million.

Nature makes fifty poor melons for one that is good, and shakes down a tree full of gnarled, wormy, unripe crabs, before you can find a dozen dessert apples; and she scatters nations of naked Indians, and nations of clothed Christians, with two or three good heads among them. Nature works very hard, and only hits the white once in a million throws. In mankind, she is contented if she yields one master in a century. The more difficulty there is in creating good men, the more they are used when they come. I once counted in a little neighbourhood, and found that every able-bodied man had, say, from twelve to fifteen persons dependent on him for material aid,—to whom he is to be for spoon and jug, for backer and sponsor, for nursery and hospital, and many functions beside: nor does it seem to make much difference whether he is bachelor or patriarch; if he do not violently decline the duties that fall to him, this amount of helplessness will in one way or another be brought home to him. This is the tax which his abilities pay. The good men are employed for private centres of use, and for larger influence. All revelations, whether of mechanical or intellectual or moral science, are made not to communities, but to single persons. All the marked events of our day, all the cities, all the colonizations, may be traced back to their origin in a private brain. All the feats which make our civility were the thoughts of a few good heads.

Meantime, this spawning productivity is not noxious or needless. You would say, this rabble of nations might be spared. But no, they are all counted and depended on. Fate keeps everything alive so long as the smallest thread of public necessity holds it on to the tree. The coxcomb and bully and thief class are allowed as proletaries, every one of their vices being the excess or acridity of a virtue. The mass are animal, in pupilage, and near chimpanzee. But the units, whereof this mass is composed, are neuters, every one of which may be grown to a queen-bee. The rule is, we are used as brute atoms, until we think: then, we use all the rest. Nature turns all malfaisance to good. Nature provided for real needs. No sane man at last distrusts himself. His existence is a

To say, then, the majority are wicked, means no malice, no bad heart in the observer, but, simply, that the majority are unripe, and have not yet come to themselves, do not yet know their opinion. *That*, if they knew it, is an oracle for them and for all. But in the passing moment, the quadruped interest is very prone to prevail: and this beast-force, whilst it nakes the discipline of the world, the school of heroes, the glory of martyrs, has provoked, in every age, the satire of wits, and the tears of good men. They find the journals, the clubs, the governments, the churches, to be in the interest and the pay of the devil. And wise men have met this obstruction in their times, like Socrates, with his famous irony; like Bacon, with life-long dissimulation; like Erasmus, with his book "The Praise of Folly;" like Rabelais, with his satire rending the nations. "They were the fools who cried against me, you will say," wrote the Chevalier de Boufflers to Grimm; "aye, but the fools have the advantage of numbers, and 'tis that which decides. 'Tis of no use for us to make war with them; we shall not weaken them; they will always be the masters. There will not be a practice or a usage introduced of which they are not the authors."

In front of these sinister facts, the first lesson of history is the good of evil. Good is a good doctor, but Bad is sometimes a better. 'Tis the oppressions of William the Norman, savage forest-laws, and crushing despotism, that made possible the inspirations of the *Magna Charta* under John. Edward I. wanted money, armies, castles, and as much as he could get. It was necessary to call the people together by shorter, swifter ways,—and the House of Commons arose. To obtain subsidies, he paid in privileges. In the twenty-fourth year of his reign, he decreed, "that no tax should be levied without consent of Lords and Commons;"—which is the basis of the English Constitution. Plutarch affirms that the cruel wars which followed the march of Alexander, introduced the civility, language, and arts of Greece into the savage East; introduced marriage; built seventy cities; and united hostile nations under one government. The barbarians who broke up the Roman empire did not arrive a day too soon. Schiller says, the Thirty Years' War made Germany a nation. Rough, selfish despots serve men immensely, as Henry VIII. in the contest with the Pope; as the infatuations no less than the wisdom of Cromwell; as the ferocity of the Russian czars

B4

plagues, break up immovable routine, clear the ground of rotten races and dens of distemper, and open a fair field to new men. There is a tendency in things to right themselves, and the war or revolution or bankruptcy that shatters a rotten system, allows things to take a new and natural order. The sharpest evils are bent into that periodicity which makes the errors of planets, and the fevers and distempers of men, self-limiting. Nature is upheld by antagonism. Passions, resistance, danger, are educators. We acquire the strength we have overcome. Without war, no soldier; without enemies, no hero. The sun were insipid, if the universe were not opaque. And the glory of character is in affronting the horrors of depravity, to draw thence new nobilities of power: as Art lives and thrills in new use and combining of contrasts, and mining into the dark evermore for blacker pits of night. What would painter do, or what would poet or saint, but for crucifixions and hells? And evermore in the world is this marvellous balance of beauty and disgust, magnificence and rats. Not Antoninus, but a poor washerwoman, said, "The more trouble, the more lion; that's my principle."

I do not think very respectfully of the designs or the doings of the people who went to California, in 1849. It was a rush and a scramble of needy adventurers, and, in the western country, a general jail-delivery of all the rowdies of the rivers. Some of them went with honest purposes, some with very bad ones, and all of them with the very commonplace wish to find a short way to wealth. But nature watches over all, and turns this malfeasance to good. California gets peopled and subdued,—civilized in this immoral way,—and, on this fiction, a real prosperity is rooted and grown. 'Tis a decoy-duck; 'tis tubs thrown to amuse the whale: but real ducks, and whales that yield oil, are caught. And out of Sabine rapes, and out of robbers' forays, real Romes and their heroisms come in fulness of time.

In America, the geography is sublime, but the men are not: the inventions are excellent, but the inventors one is sometimes ashamed of. The agencies by which events so grand as the opening of California, of Texas, of Oregon, and the junction of the two oceans are effected, are paltry,—coarse selfishness, fraud, and conspiracy: and most of the great results of history are brought about by discreditable means.

The benefaction derived in Illinois, and the great West, from railroads, is inestimable, and vastly exceeding any intentional philanthropy on record. What is the benefit done

which have evoked not only all the wealth of the soil, but the energy of millions of men. 'Tis a sentence of ancient wisdom, "that God hangs the greatest weights on the smallest wires."

What happens thus to nations, befalls every day in private houses. When the friends of a gentleman brought to his notice the follies of his sons, with many hints of their danger, he replied, that he knew so much mischief when he was a boy, and had turned out on the whole so successfully, that he was not alarmed by the dissipation of boys; 'twas dangerous water, but, he thought, they would soon touch bottom, and then swim to the top. This is bold practice, and there are many failures to a good escape. Yet one would say, that a good understanding would suffice as well as moral sensibility to keep one erect; the gratifications of the passions are so quickly seen to be damaging, and,—what men like least,—seriously lowering them in social rank. Then all talent sinks with character.

"*Croyez moi, l'erreur aussi à son mérite,*" said Voltaire. We see those who surmount, by dint of some egotism or infatuation, obstacles from which the prudent recoil. The right partisan is a heady narrow man, who, because he does not see many things, sees some one thing with heat and exaggeration, and, if he falls among other narrow men, or on objects which have a brief importance, as some trade or politics of the hour, he prefers it to the universe, and seems inspired, and a god-send to those who wish to magnify the matter, and carry a point. Better, certainly, if we could secure the strength and fire which rude, passionate men bring into society, quite clear of their vices. But who dares draw out the linchpin from the wagon-wheel? 'Tis so manifest, that there is no moral deformity, but is a good passion out of place; that there is no man who is not indebted to his foibles; that, according to the old oracle, "the Furies are the bonds of men;" that the poisons are our principal medicines, which kill the disease, and save the life. In the high prophetic phrase, *He causes the wrath of man to praise him*, and twists and wrenches our evil to our good. Shakespeare wrote—

"'Tis said, best men are moulded of their faults"—

and great educators and lawgivers, and especially generals, and leaders of colonies, mainly rely on this stuff, and esteem men

me the bad ones. And this is the reason, I suppose, why, as soon as the children are good, the mothers are scared, and think they are going to die. Mirabeau said, "There are none but men of strong passions capable of going to greatness; none but such capable of meriting the public gratitude." Passion, though a bad regulator, is a powerful spring. Any absorbing passion has the effect to deliver from the little coils and cares of every day: 'tis the heat which sets our human atoms spinning, overcomes the friction of crossing thresholds, and first addresses in society, and gives us a good start and speed, easy to continue when once it is begun. In short, there is no man who is not at some time indebted to his vices, as no plant that is not fed from manures. We only insist that the man meliorate, and that the plant grow upward, and convert the base into the better nature.

The wise workman will not regret the poverty or the solitude which brought out his working talents. The youth is charmed with the fine air and accomplishments of the children of fortune. But all great men come out of the middle classes. 'Tis better for the head; 'tis better for the heart. Marcus Antoninus says, that Fronto told him, "that the so-called high-born are for the most part heartless;" whilst nothing is so indicative of deepest culture as a tender consideration of the ignorant. Charles James Fox said of England, "The history of this country proves, that we are not to expect from men in affluent circumstances the vigilance, energy, and exertion without which the House of Commons would lose its greatest force and weight. Human nature is prone to indulgence, and the most meritorious public services have always been performed by persons in a condition of life removed from opulence." And yet what we ask daily, is to be conventional. Supply, most kind gods! this defect in my address, in my form, in my fortunes, which puts me a little out of the ring: supply it, and let me be like the rest whom I admire, and on good terms with them. But the wise gods say, No, we have better things for thee. By humiliations, by defeats, by loss of sympathy, by gulfs of disparity, learn a wider truth and humanity than that of a fine gentleman. A Fifth-Avenue landlord, a West-end householder, is not the highest style of man: and, though good hearts and sound minds are of no condition, yet he who is to be wise for many, must not be protected. He must know the huts where poor men lie, and the chores which poor men do. The first-class minds, Æsop, Socrates, Cervantes, Shakespeare, Franklin, had the poor man's feeling and mortification. A rich man

Take him out of his protections. He is a good book-keeper; or he is a shrewd adviser in the insurance office: perhaps he could pass a college examination, and take his degrees: perhaps he can give wise counsel in a court of law. Now plant him down among farmers, firemen, Indians, and emigrants. Set a dog on him: set a highwayman on him: try him with a course of mobs, send him to Kansas, to Pike's Peak, to Oregon: and, if he have true faculty, this may be the element he wants, and he will come out of it with broader wisdom and manly power. *Æsop*, *Saadi*, *Cervantes*, *Regnard*, have been taken by corsairs, left for dead, sold for slaves, and know the realities of human life.

Bad times have a scientific value. These are occasions a good learner would not miss. As we go gladly to Faneuil Hall, to be played upon by the stormy winds and strong fingers of enraged patriotism, so is a fanatical persecution, civil war, national bankruptcy, or revolution, more rich in the central tones than languid years of prosperity. What had been, ever since our memory, solid continent, yawns apart, and discloses its composition and genesis. We learn geology the morning after the earthquake, on ghastly diagrams of cloven mountains, upheaved plains, and the dry bed of the sea.

In our life and culture, everything is worked up, and comes in use,—passion, war, revolt, bankruptcy, and not less, folly and blunders, insult, ennui, and bad company. Nature is a rag merchant, who works up every shred and ort and end into new creations; like a good chemist, whom I found, the other day, in his laboratory, converting his old shirts into pure white sugar. Life is a boundless privilege, and when you pay for your ticket, and get into the car, you have no guess what good company you shall find there. You buy much that is not rendered in the bill. Men achieve a certain greatness unawares, when working to another aim.

If now in this connection of discourse, we should venture on laying down the first obvious rules of life, I will not here repeat the first rule of economy, already propounded once and again, that every man shall maintain himself,—but I will say, *health*. No labour, pains, temperance, poverty, nor exercise, that can gain it, must be grudged. For sickness is a cannibal which eats up all the life and youth it can lay hold of, and absorbs its own sons and daughters. I figure it as a pale, wailing, distracted phantom, absolutely selfish, heedless of what

severely, "Every man is a rascal as soon as he is sick." Drop the cant, and treat it sanely. In dealing with the drunken, we do not affect to be drunk. We must treat the sick with the same firmness, giving them, of course, every aid,—but with holding ourselves. I once asked a clergyman in a retired town who were his companions? what men of ability he saw? He replied, that he spent his time with the sick and the dying. I said, he seemed to me to need quite other company, and all the more that he had this: for if people were sick and dying to any purpose, we would leave all and go to them, but, as far as I had observed, they were as frivolous as the rest, and sometimes much more frivolous. Let us engage our companions not to spare us. I knew a wise woman who said to her friends, "When I am old, rule me." And the best part of health is fine disposition. It is more essential than talent, even in the works of talent. Nothing will supply the want of sunshine to peaches, and, to make knowledge valuable, you must have the cheerfulness of wisdom. Whenever you are sincerely pleased, you are nourished. The joy of the spirit indicates its strength. All healthy things are sweet-tempered. Genius works in sport, and goodness smiles to the last; and for the reason, that whoever sees the law which distributes things does not despond, but is animated to great desires and endeavours. He who desponds betrays that he has not seen it.

'Tis a Dutch proverb, that "paint costs nothing," such are its preserving qualities in damp climates. Well, sunshine costs less, yet is finer pigment. And so of cheerfulness, or a good temper—the more it is spent, the more of it remains. The latent heat of an ounce of wood or stone is inexhaustible. You may rub the same chip of pine to the point of kindling, a hundred times; and the power of happiness of any soul is not to be computed or drained. It is observed that a depression of spirits develops the germs of a plague in individuals and nations.

It is an old commendation of right behaviour, "*Alis lætus, sapiens sibi*," which our English proverb translates, "Be merry and wise." I know how easy it is to men of the world to look grave and sneer at your sanguine youth, and its glittering dreams. But I find the gayest castles in the air that were ever piled far better, for comfort and for use, than the dungeons in the air that are daily dug and caverned out by grumbling, discontented people. I know those miserable fellows, and I hate them, who see a black star always riding through the light and coloured clouds in the sky overhead: waves of light

untunes the active powers. A man should make life and nature happier to us, or he had better never been born. When the political economist reckons up the unproductive classes, he should put at the head this class of pitiers of themselves, cravers of sympathy, bewailing imaginary disasters. An old French verse runs, in my translation:—

“Some of your griefs you have cured,
And the sharpest you still have survived
But what torments of pain you endured
From evils that never arrived!”

There are three wants which never can be satisfied: that of the rich, who wants something more; that of the sick, who wants something different; and that of the traveller, who says, “Anywhere but here.” The Turkish *cadi* said to Layard, “After the fashion of thy people, thou hast wandered from one place to another, until thou art happy and content in none.” My countrymen are not less infatuated with the *rococo* toy of Italy. All America seems on the point of embarking for Europe. But we shall not always traverse seas and lands with light purposes, and for pleasure, as we say. One day we shall cast out the passion for Europe, by the passion for America. Culture will give gravity and domestic rest to those who now travel only as not knowing how else to spend money. Already, who provoke pity like that excellent family party just arriving in their well-appointed carriage, as far from home and any honest end as ever? Each nation has asked successively, “What are they here for?” until at last the party are shamed, and anticipate the question at the gates of each town.

Genial manners are good, and power of accommodation to any circumstance, but the high prize of life, the crowning fortune of a man, is to be born with a bias to some pursuit, which finds him in employment and happiness,—whether it be to make baskets, or broadswords, or canals, or statues, or songs. I doubt not this was the meaning of Socrates, when he pronounced artists the only truly wise, as being actually, not apparently so.

In childhood, we fancied ourselves walled in by the horizon, as by a glass bell, and doubted not, by distant travel, we should reach the baths of the descending sun and stars. On experiment, the horizon flies before us, and leaves us on an endless common, sheltered by no glass bell. Yet 'tis strange how tenaciously we cling to that bell-astronomy of a protecting domestic horizon. I find the same illusion in the search after

they will go inland; find a dear cottage deep in the mountains, secret as their hearts. They set forth on their travels in search of a home: they reach Berkshire; they reach Vermont; they look at the farms;—good farms, high mountain-sides: but where is the seclusion? The farm is near this; 'tis near that; they have got far from Boston, but 'tis near Albany, or near Burlington, or near Montreal. They explore a farm, but the house is small, old, thin; discontented people lived there, and are gone:—there's too much sky, too much out-doors; too public. The youth aches for solitude. When he comes to the house, he passes through the house. That does not make the deep recess he sought. "Ah! now, I perceive," he says, "it must be deep with persons; friends only can give depth." Yes, but there is a great dearth, this year, of friends; hard to find, and hard to have when found: they are just going away: they too are in the whirl of the flitting world, and have engagements and necessities. They are just starting for Wisconsin; have letters from Bremen:—see you again, soon. Slow, slow to learn the lesson, that there is but one depth, but one interior, and that is—his purpose. When joy or calamity or genius shall show him it, then woods, then farms, then city shopmen and cab-drivers, indifferently with prophet or friend, will mirror back to him its unfathomable heaven, its populous solitude.

The uses of travel are occasional, and short; but the best fruit it finds, when it finds it, is conversation; and this is a main function of life. What a difference in the hospitality of minds! Inestimable is he to whom we can say what we cannot say to ourselves. Others are involuntarily hurtful to us, and bereave us of the power of thought, impound and imprison us. As, when there is sympathy, there needs but one wise man in a company, and all are wise,—so, a blockhead makes a blockhead of his companion. Wonderful power to benumb possesses this brother. When he comes into the office or public room, the society dissolves; one after another slips out, and the apartment is at his disposal. What is incurable but a frivolous habit? A fly is as untamable as a hyena. Yet folly in the sense of fun, fooling, or dawdling, can easily be borne; as Talleyrand said, "I find nonsense singularly refreshing;" but a virulent, aggressive fool taints the reason of a household. I have seen a whole family of quiet, sensible people unhinged and beside themselves, victims of such a rogue. For the steady wrongheadedness of one perverse person irritates the best; since we must withstand absurdity. But resistance only

overset, or a carriage run away with,—not only the foolish pilot or driver, but everybody on board, is forced to assume strange and ridiculous attitudes, to balance the vehicle and prevent the upsetting. For remedy, whilst the case is yet mild, I recommend phlegm and truth: let all the truth that is spoken or done be at the zero of indifference, or truth itself will be folly. But, when the case is seated and malignant, the only safety is in amputation; as seamen say, you shall cut and run. How to live with unfit companions?—for, with such, life is for the most part spent: and experience teaches little better than our earliest instinct of self-defence, namely, not to engage, not to mix yourself in any manner with them; but let their madness spend itself unopposed;—you are you, and I am I.

Conversation is an art in which a man has all mankind for his competitors, for it is that which all are practising every day while they live. Our habit of thought,—take men as they rise,—is not satisfying; in the common experience, I fear, it is poor and squalid. The success which will content them is a bargain, a lucrative employment, an advantage gained over a competitor, a marriage, a patrimony, a legacy, and the like. With these objects, their conversation deals with surfaces: politics, trade, personal defects, exaggerated bad news, and the rain. This is forlorn, and they feel sore and sensitive. Now, if one comes who can illuminate this dark house with thoughts, show them their native riches, what gifts they have, how indispensable each is, what magical powers over nature and men; what access to poetry, religion, and the powers which constitute character: he wakes in them the feeling of worth; his suggestions require new ways of living, new books, new men, new arts and sciences,—then we come out of our egg-shell existence into the great dome, and see the zenith over and the nadir under us. Instead of the tanks and buckets of knowledge to which we are daily confined, we come down to the shore of the sea, and dip our hands in its miraculous waves. 'Tis wonderful the effect on the company. They are not the men they were. They have all been to California, and all have come back millionaires. There is no book and no pleasure in life comparable to it. Ask what is best in our experience, and we shall say, a few pieces of plain dealing with wise people. Our conversation once and again has apprised us that we belong to better circles than we have yet beheld; that a mental power invites us, whose generalizations are more worth for joy and

and shadows of an Andes landscape, such as we can hardly attain in lone meditation. Here are oracles sometimes profusely given, to which the memory goes back in barren hours.

Add the consent of will and temperament, and there exists the covenant of friendship. Our chief want in life is, somebody who shall make us do what we can. This is the service of a friend. With him we are easily great. There is a sublime attraction in him to whatever virtue is in us. How he flings wide the doors of existence! What questions we ask of him! what an understanding we have! how few words are needed! It is the only real society. An Eastern poet, Ali Ben Abu Taleb, writes with sad truth—

“He who has a thousand friends has not a friend to spare,
And he who has one enemy shall meet him everywhere.”

But few writers have said anything better to this point than Hafiz, who indicates this relation as the test of mental health: “Thou learnest no secret until thou knowest friendship, since to the unsound no heavenly knowledge enters.” Neither is life long enough for friendship. That is a serious and majestic affair, like a royal presence, or a religion, and not a postilion’s dinner to be eaten on the run. There is a pudency about friendship, as about love, and though fine souls never lose sight of it, yet they do not name it. With the first class of men our friendship or good understanding goes quite behind all accidents of estrangement, of condition, of reputation. And yet we do not provide for the greatest good of life. We take care of our health; we lay up money; we make our roof tight, and our clothing sufficient; but who provides wisely that he shall not be wanting in the best property of all,—friends? We know that all our training is to fit us for this, and we do not take the step towards it. How long shall we sit and wait for these benefactors?

It makes no difference, in looking back five years, how you have been dieted or dressed; whether you have been lodged on the first floor or the attic; whether you have had gardens and baths, good cattle and horses, have been carried in a neat equipage, or in a ridiculous truck: these things are forgotten so quickly, and leave no effect. But it counts much whether we have had good companions in that time;—almost as much as what we have been doing. And see the overpowering importance of neighbourhood in all association. As it is marriage, fit or unfit, that makes our home, so it is who lives near us of equal social degree,—a few people at convenient distance, no

matter how bad company,—these, and these only, shall be your life's companions; and all those who are native, congenial, and by many an oath of the heart sacramented to you, are gradually and totally lost. You cannot deal systematically with this fine element of society, and one may take a good deal of pains to bring people together, and to organize clubs and debating societies, and yet no result come of it. But it is certain that there is a great deal of good in us that does not know itself, and that a habit of union and competition brings people up and keeps them up to their highest point; that life would be twice or ten times life, if spent with wise and fruitful companions. The obvious inference is, a little useful deliberation and preconcert, when one goes to buy house and land.

But we live with people on other platforms; we live with dependents, not only with the young whom we are to teach all we know, and clothe with the advantages we have earned, but also with those who serve us directly, and for money. Yet the old rules hold good. Let not the tie be mercenary, though the service is measured by money. Make yourself necessary to somebody. Do not make life hard to any. This point is acquiring new importance in American social life. Our domestic service is usually a foolish fracas of unreasonable demand on one side, and shirking on the other. A man of wit was asked, in the train, what was his errand in the city? He replied, "I have been sent to procure an angel to do cooking." A lady complained to me, that, of her two maidens, one was absent-minded, and the other was absent-bodied. And the evil increases from the ignorance and hostility of every ship-load of the immigrant population swarming into houses and farms. Few people discern that it rests with the master or the mistress what service comes from the man or the maid; that this identical hussy was a tutelary spirit in one house, and a haridan in the other. All sensible people are selfish, and nature is tugging at every contract to make the terms of it fair. If you are proposing only your own, the other party must deal a little hardly by you. If you deal generously, the other, though selfish and unjust, will make an exception in your favour, and deal truly with you. When I asked an iron-master about the slag and cinder in railroad iron,—“Oh,” he said, “there's always good iron to be had: if there's cinder in the iron, 'tis because there was cinder in the pay.”

But why multiply these topics, and their illustrations, which are endless? Life brings to each his task, and, whatever art you select, algebra, planting, architecture, poems, commerce, politics,—all are attainable, even to the miraculous triumphs, on the same terms, of selecting that for which you are apt:—begin at the beginning, proceed in order, step by step. 'Tis as

in order. Wherever there is failure, there is some gladness, some superstition about luck, some step omitted, which nature never pardons. The happy conditions of life may be had on the same terms. Their attraction for you is the pledge that they are within your reach. Our prayers are prophets. There must be fidelity, and there must be adherence. How respectable the life that clings to its objects! Youthful aspirations are fine things, your theories and plans of life are fair and commendable:—but will you stick? Not one, I fear, in that Common full of people, or in a thousand, but one: and, when you tax them with treachery, and remind them of their high resolutions, they have forgotten that they made a vow. The individuals are fugitive, and in the act of becoming something else, and irresponsible. The race is great, the ideal fair, but the men whiffling and unsure. The hero is he who is immovably centred. The main difference between people seems to be, that one man can come under obligations on which you can rely,—is obligable; and another is not. As he has not a law within him, there's nothing to tie him to.

'Tis inevitable to name particulars of virtue, and of condition, and to exaggerate them. But all rests at last on that integrity which dwarfs talent, and can spare it. Sanity consists in not being subdued by your means. Fancy prices are paid for position, and for the culture of talent, but to the grand interests, superficial success is of no account. The man,—it is his attitude,—not feats, but forces,—not on set days and public occasions, but at all hours, and in repose alike as in energy, still formidable, and not to be disposed of. The populace says, with Horne Tooke, "If you would be powerful, pretend to be powerful." I prefer to say, with the old prophet, "Seekest thou great things? seek them not:"—or, what was said of a Spanish prince, "The more you took from him, the greater he looked." *Plus on lui ôte, plus il est grand.*

The secret of culture is to learn, that a few great points steadily reappear, alike in the poverty of the obscurest farm, and in the miscellany of metropolitan life, and that these few are alone to be regarded,—the escape from all false ties; courage to be what we are; and love of what is simple and beautiful; independence, and cheerful relation—these are the essentials,—these, and the wish to serve,—to add somewhat to the well-being of men.

VIII.—BEAUTY.

Was never form and never face
 So sweet to SEYD as only grace,
 Which did not slumber like a stone
 But hovered gleaming and was gone.
 Beauty chased he everywhere,
 In flame, in storm, in clouds of air.
 He smote the lake to feed his eye
 With the beryl beam of the broken wave;
 He flung in pebbles well to hear
 The moment's music which they gave.
 Oft pealed for him a lofty tone
 From nodding pole and belting zone.
 He heard a voice none else could hear
 From centred and from errant sphere.
 The quaking earth did quake in rhyme,
 Seas ebbed and flowed in epic chime.
 In dens of passion, and pits of woe,
 He saw strong Eros struggling through,
 To sun the dark and solve the curse,
 And beam to the bounds of the universe.
 While thus to love he gave his days
 In loyal worship, scornful praise,
 How spread their lures for him, in vain,
 Thieving Ambition and paltering Gain!
 He thought it happier to be dead,
 To die for Beauty, than live for bread.

THE spiral tendency of vegetation infects education also. Our books approach very slowly the things we most wish to know. What a parade we make of our science, and how far off, and at arm's length, it is from its objects! Our botany is all names, not powers: poets and romancers talk of herbs of grace and healing; but what does the botanist know of the virtues of his weeds? The geologist lays bare the strata, and can tell them all on his fingers: but does he know what effect passes into the man who builds his house in them? what effect on the race that inhabits a granite shelf? what on the inhabitants of marl and of alluvium?

We should go to the ornithologist with a new feeling, if he could teach us what the social birds say, when they sit in the autumn council, talking together in the trees. The want of sympathy makes his record a dull dictionary. His result is a dead bird. The bird is not in its ounces and inches, but in its relations to nature; and the skin or skeleton you show me, is no more a heron, than a heap of ashes, or a bottle of gases into which his body has been reduced, is Dante or

in the meadow, unable to call them by their names, than the man in the pride of his nomenclature. Astrology interested us, for it tied man to the system. Instead of an isolated beggar, the farthest star felt him, and he felt the star. However rash and however falsified by pretenders and traders in it, the hint was true and divine, the soul's avowal of its large relations, and that climate, century, remote natures, as well as near, are part of its biography. Chemistry takes to pieces, but it does not construct. Alchemy which sought to transmute one element into another, to prolong life, to arm with power,—that was in the right direction. All our science lacks a human side. The tenant is more than the house. Bugs and stamens and spores, on which we lavish so many years, are not finalities; and man, when his powers unfold in order, will take nature along with him, and emit light into all her recesses. The human heart concerns us more than the poring into microscopes, and is larger than can be measured by the pompous figures of the astronomer.

We are just as frivolous and sceptical. Men hold themselves cheap and vile: and yet a man is a fagot of thunderbolts. All the elements pour through his system: he is the flood of the flood, and fire of the fire; he feels the antipodes and the pole, as drops of his blood: they are the extension of his personality. His duties are measured by that instrument he is; and a right and perfect man would be felt to the centre of the Copernican system. 'Tis curious that we only believe as deep as we live. We do not think heroes can exert any more awful power than that surface-play which amuses us. A deep man believes in miracles, waits for them, believes in magic, believes that the orator will decompose his adversary; believes that the evil eye can wither, that the heart's blessing can heal; that love can exalt talent; can overcome all odds. From a great heart secret magnetisms flow incessantly to draw great events. But we prize very humble utilities, a prudent husband, a good son, a voter, a citizen, and deprecate any romance of character; and perhaps reckon only his money value,—his intellect, his affection, as a sort of bill of exchange, easily convertible into fine chambers, pictures, music, and wine.

The motive of science was the extension of man, on all sides, into nature, till his hands should touch the stars, his eyes see through the earth, his ears understand the language of beast and bird, and the sense of the wind; and, through his sympathy, heaven and earth should talk with him. But that

to any other. The formulas of science are like the papers in your pocket-book, of no value to any but the owner. Science in England, in America, is jealous of theory, hates the name of love and moral purpose. There's a revenge for this inhumanity. What manner of man does science make? The boy is not attracted. He says, I do not wish to be such a kind of man as my professor is. The collector has dried all the plants in his herbal, but he has lost weight and humour. He has got all snakes and lizards in his phials, but science has done for him also, and has put the man into a bottle. Our reliance on the physician is a kind of despair of ourselves. The clergy have bronchitis, which does not seem a certificate of spiritual health. Macready thought it came of the *subalto* of their voicing. An Indian prince, Tisso, one day riding in the forest, saw a herd of elk sporting. "See how happy," he said, "these browsing elks are! Why should not priests, lodged and fed comfortably in the temples, also amuse themselves?" Returning home, he imparted this reflection to the king. The king, on the next day, conferred the sovereignty on him, saying, "Prince, administer this empire for seven days: at the termination of that period I shall put thee to death." At the end of the seventh day, the king inquired, "From what cause hast thou become so emaciated?" He answered, "From the horror of death." The monarch rejoined, "Live, my child, and be wise. Thou hast ceased to take recreation, saying to thyself, In seven days I shall be put to death. These priests in the temple incessantly meditate on death; how can they enter into healthful diversions?" But the men of science or the doctors or the clergy are not victims of their pursuits, more than others. The miller, the lawyer, and the merchant, dedicate themselves to their own details, and do not come out men of more force. Have they divination, grand aims, hospitality of soul, and the equality to any event, which we demand in man, or only the reactions of the mill, of the wars, of the chicane?

No object really interests us but man, and in man only his superiorities; and, though we are aware of a perfect law in nature, it has fascination for us only through its relation to him, or as it is rooted in the mind. At the birth of Winckelmann, more than a hundred years ago, side by side with this arid, departmental, *post mortem* science, rose an enthusiasm in the study of Beauty; and perhaps some sparks from it may yet light a conflagration in the other. Knowledge of men, knowledge of manners, the power of form, and our sensibility

subjects are always near us.

So inveterate is our habit of criticism, that much of our knowledge in this direction belongs to the chapter of pathology. The crowd in the street oftener furnishes degradations than angels or redeemers: but they all prove the transparency. Every spirit makes its house; and we can give a shrewd guess from the house to the inhabitant. But not less does nature furnish us with every sign of grace and goodness. The delicious faces of children, the beauty of school-girls, "the sweet seriousness of sixteen," the lofty air of well-born, well-bred boys, the passionate histories in the looks and manners of youth and early manhood, and the varied power in all that well-known company that escort us through life,—we know how these forms thrill, paralyze, provoke, inspire, and enlarge us.

Beauty is the form under which the intellect prefers to study the world. All privilege is that of beauty; for there are many beauties; as, of general nature, of the human face and form, of manners, of brain, or method, moral beauty, or beauty of the soul.

The ancients believed that a genius or demon took possession at birth of each mortal, to guide him: that these genii were sometimes seen as a flame of fire partly immersed in the bodies which they governed;—in an evil man, resting on his head; in a good man, mixed with his substance. They thought the same genius, at the death of its ward, entered a new-born child, and they pretended to guess the pilot by the sailing of the ship. We recognise obscurely the same fact, though we give it our own names. We say, that every man is entitled to be valued by his best moment. We measure our friends so. We know, they have intervals of folly, whereof we take no heed, but wait the reappearings of the genius, which are sure and beautiful. On the other side, everybody knows people who appear beridden, and who, with all degrees of ability, never impress us with the air of free agency. They know it too, and peep with their eyes to see if you detect their sad plight. We fancy, could we pronounce the solving word, and disenchant them, the cloud would roll up, the little rider would be discovered and unseated, and they would regain their freedom. The remedy seems never to be far off, since the first step into thought lifts this mountain of necessity. Thought is the pent air-ball which can rive the planet, and the beauty which certain objects have for him is the friendly fire which expands the thought, and acquaints the prisoner that liberty and power await him.

appearance, had been for ever concealed from us." And the working of this deep instinct makes all the excitement—much of it superficial and absurd enough—about works of art, which leads armies of vain travellers every year to Italy, Greece, and Egypt. Every man values every acquisition he makes in the science of beauty, above his possessions. The most useful man in the most useful world, so long as only commodity was served, would remain unsatisfied. But as fast as he sees beauty, life acquires a very high value.

I am warned by the ill-fate of many philosophers not to attempt a definition of Beauty. I will rather enumerate a few of its qualities. We ascribe beauty to that which is simple; which has no superfluous parts; which exactly answers its end; which stands related to all things; which is the mean of many extremes. It is the most enduring quality, and the most ascending quality. We say, love is blind, and the figure of Cupid is drawn with a bandage round his eyes. Blind:—yes, because he does not see what he does not like; but the sharpest-sighted hunter in the universe is Love, for finding what he seeks, and only that; and the mythologists tell us, that Vulcan was painted lame, and Cupid blind, to call attention to the fact, that one was all limbs and the other all eyes. In the true mythology, Love is an immortal child, and Beauty leads him as a guide: nor can we express a deeper sense than when we say, Beauty is the pilot of the young soul.

Beyond their sensuous delight, the forms and colours of nature have a new charm for us in our perception, that not one ornament was added for ornament, but is a sign of some better health, or more excellent action. Elegance of form in bird or beast, or in the human figure, marks some excellence of structure: or beauty is only an invitation from what belongs to us. 'Tis a law of botany, that in plants, the same virtues follow the same forms. It is a rule of largest application, true in a plant, true in a loaf of bread, that in the construction of any fabric or organism any real increase of fitness to its end is an increase of beauty.

The lesson taught by the study of Greek and of Gothic art, of antique and of pre-Raphaelite painting, was worth all the research,—namely, that all beauty must be organic; that outside embellishment is deformity. It is the soundness of the bones that ultimates itself in a peach-bloom complexion: health of constitution that makes the sparkle and the power of the eye. 'Tis the adjustment of the size and of the joining of

badly built man to walk well. The tint of the flower proceeds from its root, and the lustres of the sea-shell begin with its existence. Hence our taste in building rejects paint, and all shifts, and shows the original grain of the wood: refuses pilasters and columns that support nothing, and allows the real supporters of the house honestly to show themselves. Every necessary or organic action pleases the beholder. A man leading a horse to water, a farmer sowing seed, the labours of hay-makers in the field, the carpenter building a ship, the smith at his forge or whatever useful labour is becoming to the wise eye. But if it is done to be seen, it is mean. How beautiful are ships on the sea! but ships in the theatre,—or ships kept for picturesque effect on Virginia Water, by George IV., and men hired to stand in fitting costumes at a penny an hour!—What a difference in effect between a battalion of troops marching to action, and one of our independent companies on a holiday! In the midst of a military show, and a festal procession gay with banners, I saw a boy seize an old tin pan that lay rusting under a wall, and poising it on the top of a stick; he set it turning, and made it describe the most elegant imaginable curves, and drew away attention from the decorated procession by this startling beauty.

Another text from the mythologists. The Greeks fabled that Venus was born of the foam of the sea. Nothing interests us which is stark or bounded, but only what streams with life, what is in act or endeavour to reach somewhat beyond. The pleasure a palace or a temple gives the eye is that an order and method has been communicated to stones, so that they speak and geometrize, become tender or sublime with expression. Beauty is the moment of transition, as if the form were just ready to flow into other forms. Any fixedness, heaping, or concentration on one feature,—a long nose, a sharp chin, a hump-back,—is the reverse of the flowing, and therefore deformed. Beautiful as is the symmetry of any form, if the form can move, we seek a more excellent symmetry. The interruption of equilibrium stimulates the eye to desire the restoration of symmetry, and to watch the steps through which it is attained. This is the charm of running water, sea-waves, the flight of birds, and the locomotion of animals. This is the theory of dancing, to recover continually in changes the lost equilibrium, not by abrupt and angular, but by gradual and curving movements. I have been told by persons of experience in matters of taste, that the fashions follow a law of gradation, and are never arbitrary. The new mode is always

offence in our own modes. It is necessary in music, when you strike a discord, to let down the ear by an intermediate note or two to the accord again: and many a good experiment, born of good sense, and destined to succeed, fails, only because it is offensively sudden. I suppose the Parisian milliner who dresses the world from her imperious boudoir will know how to reconcile the Bloomer costume to the eye of mankind, and make it triumphant over Punch himself, by interposing the just gradations. I need not say, how wide the same law ranges, and how much it can be hoped to effect. Aal that is a little harshly claimed by progressive parties, may easily come to be conceded without question, if this rule be observed. Thus the circumstances may be easily imagined, in which woman may speak, vote, argue causes, legislate, and drive a coach, and all the most naturally in the world, if only it come by degrees. To this streaming or flowing belongs the beauty that all circular movement has; as, the circulation of waters, the circulation of the blood, the periodical motion of planets, the annual wave of vegetation, the action and reaction of nature: and, if we follow it out, this demand in our thought for an ever-onward action is the argument for the immortality.

One more text from the mythologists is to the same purpose, —*Beauty rides on a lion*. Beauty rests on necessities. The line of beauty is the result of perfect economy. The cell of the bee is built at that angle which gives the most strength with the least wax; the bone or the quill of the bird gives the most alar strength with the least weight. "It is the purgation of superfluities," said Michael Angelo. There is not a particle to spare in natural structures. There is a compelling reason in the uses of the plant, for every novelty of colour or form: and our art saves material, by more skilful arrangement, and reaches beauty by taking every superfluous ounce that can be spared from a wall, and keeping all its strength in the poetry of columns. In rhetoric, this art of omission is a chief secret of power, and, in general, it is proof of high culture to say the greatest matters in the simplest way.

Veracity first of all, and for ever. *Rien de beau que le vrai*. In all design, art lies in making your object prominent, but there is a prior art in choosing objects that are prominent. The fine arts have nothing casual, but spring from the instincts of the nations that created them.

Beauty is the quality which makes to endure. In a house that I know, I have noticed a block of spermaceti lying about closets and mantelpieces, for twenty years together, simply

century. Let an artist scrawl a few lines or figures on the back of a letter, and that scrap of paper is rescued from danger, is put in portfolio, is framed and glazed, and, in proportion to the beauty of the lines drawn, will be kept for centuries. Burns writes a copy of verses, and sends them to a newspaper, and the human race take charge of them that they shall not perish.

As the flute is heard farther than the cart, see how surely a beautiful form strikes the fancy of men, and is copied and reproduced without end. How many copies are there of the Belvedere Apollo, the Venus, the Psyche, the Warwick Vase, the Parthenon, and the Temple of Vesta! These are objects of tenderness to all. In our cities, an ugly building is soon removed, and is never repeated, but any beautiful building is copied and improved upon, so that all masons and carpenters work to repeat and preserve the agreeable forms, whilst the ugly ones die out.

The felicities of design in art, or in works of nature, are shadows or forerunners of that beauty which reaches its perfection in the human form. All men are its lovers. Wherever it goes, it creates joy and hilarity, and everything is permitted to it. It reaches its height in woman. "To Eve," say the Mahometans, "God gave two thirds of all beauty." A beautiful woman is a practical poet, taming her savage mate, planting tenderness, hope, and eloquence, in all whom she approaches. Some favours of condition must go with it, since a certain serenity is essential, but we love its reproofs and superiorities. Nature wishes that woman should attract man, yet she often cunningly moulds into her face a little sarcasm, which seems to say, "Yes, I am willing to attract, but to attract a little better kind of a man than any I yet behold." French *mémoires* of the fifteenth century celebrate the name of Pauline de Viguier, a virtuous and accomplished maiden, who so fired the enthusiasm of her contemporaries by her enchanting form, that the citizens of her native city of Toulouse obtained the aid of the civil authorities to compel her to appear publicly on the balcony at least twice a week, and, as often as she showed herself, the crowd was dangerous to life. Not less, in England, in the last century, was the fame of the Gunnings, of whom Elizabeth married the Duke of Hamilton, and Maria the Earl of Coventry. Walpole says, "The concourse was so great when the Duchess of Hamilton was presented at court, on Friday, that even the noble crowd in the drawing-room clambered on chairs and tables to look at her. There are mobs at their doors to see them get into their chairs, and people go early to

and about an inn, in Berkshire, to see her get into her post-chaise next morning."

But why need we console ourselves with the fames of Helen of Argos, or Corinna, or Pauline of Toulouse, or the Duchess of Hamilton? We all know this magic very well, or can divine it. It does not hurt weak eyes to look into beautiful eyes never so long. Women stand related to beautiful Nature around us, and the enamoured youth mixes their form with moon and stars, with woods and waters, and the pomp of summer. They heal us of awkwardness by their words and looks. We observe their intellectual influence on the most serious student. They refine and clear his mind; teach him to put a pleasing method into what is dry and difficult. We talk to them, and wish to be listened to; we fear to fatigue them, and acquire a facility of expression which passes from conversation into habit of style.

That Beauty is the normal state, is shown by the perpetual effort of Nature to attain it. Mirabeau had an ugly face on a handsome ground; and we see faces every day which have a good type, but have been marred in the casting: a proof that we are all entitled to beauty, should have been beautiful, if our ancestors had kept the laws,—as every lily and every rose is well. But our bodies do not fit us, but caricature and satirize us. Thus, short legs, which constrain us to short, mincing steps, are a kind of personal insult and contumely to the owner; and long stilts, again, put him at perpetual disadvantage, and force him to stoop to the general level of mankind. Martial ridicules a gentleman of his day whose countenance resembled the face of a swimmer seen under water. Snadi describes a schoolmaster "so ugly and crabbed, that a sight of him would derange the ecstasies of the orthodox." Faces are rarely true to any ideal type, but are a record in sculpture of a thousand anecdotes of whim and folly. Portrait painters say that most faces and forms are irregular and unsymmetrical; have one eye blue, and one gray; the nose not straight; and one shoulder higher than another; the hair unequally distributed, &c. The man is physically as well as metaphysically a thing of shreds and patches, borrowed unequally from good and bad ancestors, and a misfit from the start.

A beautiful person, among the Greeks, was thought to betray by this sign some secret favour of the immortal gods: and we can pardon pride, when a woman possesses such a figure, that wherever she stands, or moves, or leaves a shadow on the wall, or sits for a portrait to the artist, she confers a

Ménage said of the President De Banneau, "A Greek epigram for nothing but to sit for his portrait." A Greek epigram intimates that the force of love is not shown by the courting of beauty, but when the like desire is inflamed for one who is ill-favoured. And petulant old gentlemen, who have chanced to suffer some intolerable weariness from pretty people, or who have seen cut flowers to some profusion, or who see, after a world of pains have been successfully taken for the costume, how the least mistake in sentiment takes all the beauty out of your clothes,—affirm, that the secret of ugliness consists not in irregularity, but in being uninteresting.

We love any forms, however ugly, from which great qualities shine. If command, eloquence, art, or invention, exist in the most deformed person, all the accidents that usually displease, please, and raise esteem and wonder higher. The great orator was an emaciated, insignificant person, but he was all brain. Cardinal De Retz says of De Bouillon, "With the physiognomy of an ox, he had the perspicacity of an eagle." It was said of Hooke, the friend of Newton, "He is the most, and promises the least, of any man in England." "Since I am so ugly," said Du Guesclin, "it behooves that I be bold." Sir Philip Sidney, the darling of mankind, Ben Jonson tells us, "was no pleasant man in countenance, his face being spoiled with pimples, and of high blood, and long." Those who have ruled human destinies, like planets, for thousands of years, were not handsome men. If a man can raise a small city to be a great kingdom, can make bread cheap, can irrigate deserts, can join oceans by canals, can subdue steam, can organize victory, can lead the opinions of mankind, can enlarge knowledge, 'tis no matter whether his nose is parallel to his spine, as it ought to be, or whether he has a nose at all; whether his legs are straight, or whether his legs are amputated; his deformities will come to be reckoned ornamental, and advantageous on the whole. This is the triumph of expression, degrading beauty, charming us with a power so fine and friendly and intoxicating, that it makes admired persons insipid, and the thought of passing our lives with them insupportable. There are faces so fluid with expression, so flushed and rippled by the play of thought, that we can hardly find what the mere features really are. When the delicious beauty of lineaments loses its power, it is because a more delicious beauty has appeared; that an interior and durable form has been disclosed. Still, Beauty rides on her lion, as before. Still, "it was for beauty that the world was

a finer brain, a finer method, than their own. If a man can cut such a head on his stone gate-post as shall draw and keep a crowd about it all day, by its beauty, good nature, and inscrutable meaning—if a man can build a plain cottage with such symmetry, as to make all the fine palaces look cheap and vulgar; can take such advantage of Nature that all her powers serve him; making use of geometry instead of expense; tapping a mountain for his water-jet; causing the sun and moon to seem only the decorations of his estate;—this is still the legitimate dominion of Beauty.

The radiance of the human form, though sometimes astonishing, is only a burst of beauty for a few years or a few months, at the perfection of youth, and in most, rapidly declines. But we remain lovers of it, only transferring our interest to interior excellence. And it is not only admirable in singular and salient talents, but also in the world of manners.

But the sovereign attribute remains to be noted. Things are pretty, graceful, rich, elegant, handsome, but, until they speak to the imagination, not yet beautiful. This is the reason why beauty is still escaping out of all analysis. It is not yet possessed, it cannot be handled. Proclus says, "it swims on the light of forms." It is properly not in the form, but in the mind. It instantly deserts possession and flies to an object in the horizon. If I could put my hand on the north star, would it be as beautiful? The sea is lovely, but when we bathe in it, the beauty forsakes all the near water. For the imagination and senses cannot be gratified at the same time. Wordsworth rightly speaks of "a light that never was on sea or land," meaning, that it was supplied by the observer, and the Welsh bard warns his countrywomen that

" half of their charms with Cadwallon shall die."

The new virtue which constitutes a thing beautiful, is a certain cosmical quality, or a power to suggest relation to the whole world, and so lift the object out of a pitiful individuality. Every natural feature,—sea, sky, rainbow, flowers, musical tone,—has in it somewhat which is not private, but universal, speaks of that central benefit which is the soul of Nature, and thereby is beautiful. And, in chosen men and women, I find somewhat in form, speech, and manners, which is not of their person and family, but of a humane, catholic, and spiritual character, and we love them as the sky. They have

The feat of the imagination is in showing the convertibility of everything into every other thing. Facts which had never before left their stark common sense, suddenly figure as Eleusinian mysteries. My boots and chair and candlestick are fairies in disguise, meteors and constellations. All the facts in Nature are nouns of the intellect, and make the grammar of the eternal language. Every word has a double, treble, or centuple use and meaning. What! has my stove and pepper-pot a false bottom! I cry you mercy, good shoe-box! I did not know you were a jewel-case. Chaff and dust begin to sparkle, and are clothed about with immortality. And there is a joy in perceiving the representative or symbolic character of a fact, which no bare fact or event can ever give. There are no days in life so memorable as those which vibrated to some stroke of the imagination.

The poets are quite right in decking their mistresses with the spoils of the landscape, flower-gardens, gems, rainbows, flushes of morning, and stars of night, since all beauty points at identity, and whatsoever thing does not express to me the sea and sky, day and night, is somewhat forbidden and wrong. Into every beautiful object there enters somewhat immeasurable and divine, and just as much into form bounded by outlines, like mountains on the horizon, as into tones of music, or depths of space. Polarized light showed the secret architecture of bodies; and when the *second sight* of the mind is opened, now one colour or form or gesture, and now another, has a pungency, as if a more interior ray had been emitted, disclosing its deep holdings in the frame of things.

The laws of this translation we do not know, or why one feature or gesture enchants, why one word or syllable intoxicates, but the fact is familiar that the fine touch of the eye, or a grace of manners, or a phrase of poetry, plants wings at our shoulders; as if the Divinity, in his approaches, lifts away mountains of obstruction, and deigns to draw a truer line, which the mind knows and owns. This is that haughty force of beauty, "*vis superba forma*," which the poets praise, —under calm and precise outline, the immeasurable and divine: Beauty hiding all wisdom and power in its calm sky.

All high beauty has a moral element in it, and I find the antique sculpture as ethical as Marcus Antoninus: and the beauty ever in proportion to the depth of thought. Gross and obscure natures, however decorated, seem impure shambles; but character gives splendour to youth, and awe to wrinkled skin and gray hairs. An adorer of truth we cannot

choose but obey, and the woman who has shared with us the moral sentiment,—her locks must appear to us sublime. Thus there is a climbing scale of culture, from the first agreeable sensation which a sparkling gem or a scarlet stain affords the eye, up through fair outlines and details of the landscape, features of the human face and form, signs and tokens of thought and character in manners, up to the ineffable mysteries of the intellect. Wherever we begin, thither our steps tend: an ascent from the joy of a horse in his trappings, up to the perception of Newton, that the globe on which we ride is only a larger apple falling from a larger tree; up to the perception of Plato, that globe and universe are rude and early expressions of an all-dissolving Unity,—the first stair on the scale to the temple of the Mind.

IX.—ILLUSIONS.

Flow, flow the waves hated,
 Accursed, adored,
 The waves of mutation:
 No anchorage is.
 Sleep is not, death is not,
 Who seem to die, live.
 House you were born in,
 Friends of your spring-time,
 Old man and young maid,
 Day's toil and its guerdon—
 They are all vanishing,
 Fleeing to fables,
 Cannot be moored.
 See the stars through them,
 Through treacherous marbles.
 Know, the stars yonder,
 The stars everlasting,
 Are fugitive also,
 And emulate, vaulted,
 The lambent heat-lightning,
 And fire-fly's flight.
 When thou dost return
 On the wave's circulation,
 Beholding the shimmer,
 The will's dissipation,
 And, out of endeavour
 To change and to flow,
 The gas becomes solid,
 And phantoms and nothings
 Return to be things,

And endless imbroglío
 Is law and the world,—
 Then first shalt thou kn^w,
 That in the wild turmoil,
 Horsed on the Proteus,
 Thou ridest to power,
 And to endurance.

SOME years ago, in company with an agreeable party, I spent a long summer day in exploring the Mammoth Cave in Kentucky. We traversed, through spacious galleries affording a solid masonry foundation for the town and county overhead, the six or eight black miles from the mouth of the cavern to the innermost recess which tourists visit,—a niche or grotto made of one seamless stalactite, and called, I believe, Serena's Bower. I lost the light of one day. I saw high domes, and bottomless pits; heard the voice of unseen waterfalls; paddled three quarters of a mile in the deep Echo River, whose waters are peopled with the blind fish; crossed the streams "Lethe" and "Styx;" plied with music and guns the echoes in these alarming galleries; saw every form of stalagmite and stalactite in the sculptured and fretted chambers,—icicle, orange-flower, acanthus, grapes, and snowball. We shot Bengal lights into the vaults and groins of the sparry cathedrals, and examined all the masterpieces which the four combined engineers, water, limestone, gravitation, and time, could make in the dark.

The mysteries and scenery of the cave had the same dignity that belongs to all natural objects, and which shames the fine things to which we foppishly compare them. I remarked, especially, the mimetic habit, with which Nature, on new instruments, hums her old tunes, making night to mimic day, and chemistry to ape vegetation. But I then took notice, and still chiefly remember, that the best thing which the cave had to offer was an illusion. On arriving at what is called the "Star Chamber," our lamps were taken from us by the guide, and extinguished or put aside, and, on looking upwards, I saw or seemed to see the night heaven thick with stars glimmering more or less brightly over our heads, and even what seemed a comet flaming among them. All the party were touched with astonishment and pleasure. Our musical friends sung with much feeling a pretty song, "The stars are in the quiet sky," &c., and I sat down on the rocky floor to enjoy the serene picture. Some crystal specks in the black ceiling high overhead, reflecting the light of a half-hid lamp, yielded this magnificent effect.

I own. I did not like the cave so well for eking out its

cloud-rack, the sunrise and sunset glories, rainbows, and northern lights, are not quite so spherul as our childhood thought them; and the part our organization plays in them is too large. The senses interfere everywhere, and mix their own structure with all they report of. Once, we fancied the earth a plane, and stationary. In admiring the sunset, we do not yet deduct the rounding, co-ordinating, pictorial powers of the eye.

The same interference from our organization creates the most of our pleasure and pain. Our first mistake is the belief that the circumstance gives the joy which we give to the circumstance. Life is an ecstasy. Life is sweet as nitrous oxide; and the fisherman dripping all day over a cold pond, the switchman at the railway intersection, the farmer in the field, the negro in the rice-swamp, the fop in the street, the hunter in the woods, the barrister with the jury, the belle at the ball, all ascribe a certain pleasure to their employment, which they themselves give it. Health and appetite impart the sweetness to sugar, bread, and meat. We fancy that our civilization has got on far, but we still come back to our primers.

We live by our imaginations, by our admirations, by our sentiments. The child walks amid heaps of illusions, which he does not like to have disturbed. The boy, how sweet to him is his fancy! how dear the story of barons and battles! What a hero he is, whilst he feeds on his heroes! What a debt is his to imaginative books! He has no better friend or influence than Scott, Shakespeare, Plutarch, and Homer. The man lives to other objects, but who dare affirm that they are more real? Even the prose of the streets is full of refractions. In the life of the dreariest alderman, fancy enters into all details, and colours them with rosy hue. He imitates the air and actions of people whom he admires, and is raised in his own eyes. He pays a debt quicker to a rich man than to a poor man. He wishes the bow and compliment of some leader in the state, or in society; weighs what he says; perhaps he never comes nearer to him for that, but dies at last better contented for this amusement of his eyes and his fancy.

The world rolls, the din of life is never hushed. In London, in Paris, in Boston, in San Francisco, the carnival, the masquerade is at its height. Nobody drops his domino. The unities, the fictions of the piece, it would be an impertinence to break. The chapter of fascinations is very long. Great is paint; nay

maskers. It was witty, it somewhat bitterly, said by D'Alembert, "*qu'un état de vapeur était un état très fâcheux, parcequ'il nous faisait voir les choses comme elles sont.*" I find men victims of illusion in all parts of life. Children, youths, adults, and old men, all are led by one bauble or another. Yoganidra, the goddess of illusion, Proteus, or Momus, or Gylfi's Mocking,—for the Power has many names,—is stronger than the Titans, stronger than Apollo. Few have overheard the gods, or surprised their secret. Life is a succession of lessons which must be lived to be understood. All is riddle, and the key to a riddle is another riddle. There are as many pillows of illusion as flakes in a snow-storm. We wake from one dream into another dream. The toys, to be sure, are various, and are graduated in refinement to the quality of the dupe. The intellectual man requires a fine bait; the sets are easily amused. But everybody is drugged with his own frenzy, and the pageant marches at all hours, with music and banner and badge.

Amid the joyous troop who give in to the charivari, comes now and then a sad-eyed boy, whose eyes lack the requisite refractions to clothe the show in due glory, and who is afflicted with a tendency to trace home the glittering miscellany of fruits and flowers to one root. Science is a search after identity, and the scientific whim is lurking in all corners. At the State Fair, a friend of mine complained that all the varieties of fancy pears in our orchards seem to have been selected by somebody who had a whim for a particular kind of pear, and only cultivated such as had that perfume; they were all alike. And I remember the quarrel of another youth with the confectioners, that, when he racked his wit to choose the best comfits in the shops, in all the endless varieties of sweetmeat he could only find three flavours, or two. What then? Pears and cakes are good for something; and because you, unluckily, have an eye or nose too keen, why need you spoil the comfort which the rest of us find in them? I knew a humorist who, in a good deal of rattle, had a grain or two of sense. He shocked the company by maintaining that the attributes of God were two,—power and risibility; and that it was the duty of every pious man to keep up the comedy. And I have known gentlemen of great stake in the community, but whose sympathies were cold,—presidents of colleges, and governors, and senators,—who held themselves bound to sign every temperance pledge, and act with Bible societies, and missions, and peace-makers, and cry *Hist-a-boy!* to every good dog. We must not carry comity too far, but we all have kind impulses in this direction. When the boys come into my yard for leave to

are laid on very thick. Their young life is thatched with them. Bare and grim to tears is the lot of the children in the hovel I saw yesterday; yet not the less they hung it round with frippery romance, like the children of the happiest fortune, and talked of "the dear cottage where so many joyful hours had flown." Well, this thatching of hovels is the custom of the country. Women, more than all, are the element and kingdom of illusion. Being fascinated, they fascinate. They see through Claude-Lorraines. And how dare any one, if he could, pluck away the *coulisses*, stage effects, and ceremonies, by which they live? Too pathetic, too pitiable, is the region of affection, and its atmosphere always liable to *mirage*.

We are not very much to blame for our bad marriages. We live amid hallucinations; and this especial trap is laid to trip up our feet with, and all are tripped up first or last. But the mighty Mother who had been so sly with us, as if she felt that she owed us some indemnity, insinuates into the Pandora-box of marriage some deep and serious benefits, and some great joys. We find a delight in the beauty and happiness of children, that makes the heart too big for the body. In the worst-assorted connections there is ever some mixture of true marriage. Teague and his jade get some just relations of mutual respect, kindly observation, and fostering of each other, learn something, and would carry themselves wiselier, if they were now to begin.

'Tis fine for us to point at one or another fine madman, as if there were any exempts. The scholar in his library is none. I, who have all my life heard any number of orations and debates, read poems and miscellaneous books, conversed with many geniuses, am still the victim of any new page; and, if Marmaduke, or Hugh, or Moosehead, or any other, invent a new style or mythology, I fancy that the world will be all brave and right, if dressed in these colours, which I had not thought of. Then at once I will daub with this new paint: but it will not stick. 'Tis like the cement which the pedler sells at the door; he makes broken crockery hold with it, but you can never buy of him a bit of the cement which will make it hold when he is gone.

Men who make themselves felt in the world avail themselves of a certain fate in their constitution, which they know how to use. But they never deeply interest us, unless they lift a corner of the curtain, or betray never so slightly their penetration of what is behind it. 'Tis the charm of practical men,

to walk, though they can ride so fiercely. Bonaparte is intellectual, as well as Cæsar; and the best soldiers, sea-captains, and railway men have a gentleness, when off duty; a good-natured admission that there are illusions, and who shall say that he is not their sport? We stigmatize the cast-iron fellows, who cannot so detach themselves, as "dragon-ridden," "thunder-stricken," and fools of fate, with whatever powers endowed.

Since our tuition is through emblems and indirections, 'tis well to know that there is method in it, a fixed scale, and rank above rank in the phantasms. We begin low with coarse masks, and rise to the most subtle and beautiful. The red men told Columbus, "they had an herb which took away fatigue;" but he found the illusion of "arriving from the east at the Indies" more composing to his lofty spirit than any tobacco. Is not our faith in the impenetrability of matter more sedative than narcotics? You play with jack-straws, balls, bowls, horse and gun, estates and politics; but there are finer games before you. Is not time a pretty toy? Life will show you masks that are worth all your carnivals. Yonder mountain must migrate into your mind. The fine star-dust and nebulous blur in Orion, "the portentous year of Mizar and Alcor," must come down and be dealt with in your household thought. What if you shall come to discern that the play and playground of all this pompous history are radiations from yourself, and that the sun borrows his beams? What terrible questions we are learning to ask! The former men believed in magic, by which temples, cities, and men were swallowed up and all trace of them gone. We are coming on the secret of a magic which sweeps out of men's minds all vestige of theism and beliefs which they and their fathers held and were framed upon.

There are deceptions of the senses, deceptions of the passions, and the structural, beneficent illusions of sentiment and of the intellect. There is the illusion of love, which attributes to the beloved person all which that person shares with his or her family, sex, age, or condition, nay, with the human mind itself. 'Tis these which the lover loves, and Anna Matilda gets the credit of them. As if one shut up always in a tower, with one window, through which the face of heaven and earth could be seen, should fancy that all the marvels he beheld belonged to that window. There is the illusion of time, which is very deep; who has disposed of it? or come to the conviction that what seems the *succession* of thought is only the distribution of wholes into causal series?

act is perfected. There is illusion that shall deceive even the elect. There is illusion that shall deceive even the performer of the miracle. Though he make his body, he denies that he makes it. Though the world exist from thought, thought is daunted in presence of the world. One after the other we accept the mental laws, still resisting those which follow, which however must be accepted. But all our concessions only compel us to new profusion. And what avails it that science has come to treat space and time as simply forms of thought, and the material world as hypothetical, and withal our pretension of *property* and even of self-hood are fading with the rest, if, at last, even our thoughts are not finalities; but the incessant flowing and ascension reach these also, and each thought which yesterday was a finality, to-day is yielding to a larger generalization?

With such volatile elements to work in, 'tis no wonder if our estimates are loose and floating. We must work and affirm, but we have no guess of the value of what we say or do. The cloud is now as big as your hand, and now it covers a county. That story of Thor, who was set to drain the drinking-horn in Asgard, and to wrestle with the old woman, and to run with the runner Lok, and presently found that he had been drinking up the sea, and wrestling with Time, and racing with Thought, describes us who are contending, amid these seeming trifles, with the supreme energies of Nature. We fancy we have fallen into bad company and squalid condition, low debts, shoe-bills, broken glass to pay for, pots to buy, butcher's meat, sugar, milk, and coal. "Set me some great task, ye gods! and I will show my spirit." "Not so," says the good Heaven; "plod and plough, vamp your old coats and hats, weave a shoestrings; great affairs and the best wine by-and-by." Well, 'tis all phantasm; and if we weave a yard of tape in all humility, and as well as we can, long hereafter we shall see it was no cotton tape at all, but some galaxy which we braided, and that the threads were Time and Nature.

We cannot write the order of the variable winds. How can we penetrate the law of our shifting moods and susceptibility? Yet they differ as all and nothing. Instead of the firmament of yesterday, which our eyes require, it is to-day an eggshell which coops us in; we cannot even see what or where our stars of destiny are. From day to day, the capital facts of human life are hidden from our eyes. Suddenly the

these things been shown. A sudden rise in the road shows us the system of mountains, and all the summits, which have been just as near us all the year, but quite out of mind. But these alternations are not without their order, and we are parties to our various fortune. If life seem a succession of dreams, yet poetic justice is done in dreams also. The visions of good men are good; it is the undisciplined will that is whipped with bad thoughts and bad fortunes. When we break the laws, we lose our hold on the central reality. Like sick men in hospitals, we change only from bed to bed, from one folly to another; and it cannot signify much what becomes of such castaways,—wailing, stupid, comatose creatures,—lifted from bed to bed, from the nothing of life to the nothing of death.

In this kingdom of illusions we grope eagerly for stays and foundations. There is none but a strict and faithful dealing at home, and a severe barring out of all duplicity or illusion there. Whatever games are played with us, we must play no games with ourselves, but deal in our privacy with the last honesty and truth. I look upon the simple and childish virtues of veracity and honesty as the root of all that is sublime in character. Speak as you think, be what you are, pay your debts of all kinds. I prefer to be owned as sound and solvent, and my word as good as my bond, and to be what cannot be skipped, or dissipated, or undermined, to all the *façade* in the universe. This reality is the foundation of friendship, religion, poetry, and art. At the top or at the bottom of all illusions, I set the cheat which still leads us to work and live for appearances, in spite of our conviction, in all sane hours, that it is what we really are that avails with friends, with strangers, and with fate or fortune.

One would think from the talk of men, that riches and poverty were a great matter; and our civilization mainly respects it. But the Indians say, that they do not think the white man with his brow of care, always toiling, afraid of heat and cold, and keeping within doors, has any advantage of them. The permanent interest of every man is, never to be in a false position, but to have the weight of Nature to back him in all that he does. Riches and poverty are a thick or thin costume; and our life—the life of all of us—identical. For we transcend the circumstance continually, and taste the real quality of existence; as in our employments, which only differ in the manipulations, but express the same laws; or in our thoughts, which wear no silks and taste no ice-creams. We see God face to face every hour, and know the savour of Nature.

Hindoos, in their sacred writings, express the liveliest feeling, both of the essential identity, and of that illusion which they conceive variety to be "The notions, '*I am,*' and '*This is mine,*' which influence mankind, are but delusions of the mother of the world. Dispel, O Lord of all creatures! the conceit of knowledge which proceeds from ignorance." And the beatitude of man they hold to lie in being freed from fascination.

The intellect is stimulated by the statement of truth in a trope, and the will by clothing the laws of life in illusions. But the unities of Truth and of Right are not broken by the disguise. There need never be any confusion in these. In a crowded life of many parts and performers, on a stage of nations, or in the obscurest hamlet in Maine or California, the same elements offer the same choices to each new comer, and, according to his election, he fixes his fortune in absolute nature. It would be hard to put more mental and moral philosophy than the Persians have thrown into a sentence:—

"Fooled thou must be, though wisest of the wise:
Then be the fool of virtue, not of vice."

There is no chance, and no anarchy, in the universe. All is system and gradation. Every god is there sitting in his sphere. The young mortal enters the hall of the firmament: there is he alone with them alone, they pouring on him benedictions and gifts, and beckoning him up to their thrones. On the instant, and incessantly, fall snow-storms of illusions. He fancies himself in a vast crowd which sways this way and that, and whose movement and doings he must obey: he fancies himself poor, orphaned, insignificant. The mad crowd drives hither and thither, now furiously commanding this thing to be done, now that. What is he that he should resist their will, and think or act for himself? Every moment, new changes, and new showers of deceptions, to baffle and distract him. And when, by-and-by, for an instant, the air clears, and the cloud lifts a little, there are the gods still sitting around him on their thrones,—they alone with him alone.

BRITISH POETS.

'This excellent edition of the English classics, with their complete texts and scholarly introductions, are something very different from the cheap volumes of extracts which are just now so much too common.'—*St. James's Gazette*.

'An excellent series. Small, handy, and complete.'—*Saturday Review*.

THE ONLY AUTHORIZED AND COMPLETE 'WEBSTER.'
WEBSTER'S INTERNATIONAL DICTIONARY.

*An entirely New Edition, thoroughly Revised, considerably Enlarged,
and reset in New Type.*

Medium 4to. 2118 pages, 3500 illustrations.

Prices: Cloth, £1 11s. 6d.; half-calf, £2 2s.; half-russia, £2 5s.;
calf, £2 8s. Also in 2 vols. cloth, £1 14s.

In addition to the Dictionary of Words, with their pronunciation, etymology, alternative spellings, and various meanings, illustrated by quotations and numerous woodcuts, there are several valuable appendices, comprising a Pronouncing Gazetteer of the World; Vocabularies of Scripture, Greek, Latin, and English Proper Names; a Dictionary of the noted Names of Fiction; a Brief History of the English Language; a Dictionary of Foreign Quotations, Words, Phrases, Proverbs, &c.; a Biographical Dictionary with 10,000 Names, &c.

This last revision, comprising and superseding the issues of 1847, 1864, and 1880, is by far the most complete that the Work has undergone during the sixty-two years that it has been before the public. Every page has been treated as if the book were now published for the first time.

SOME PRESS OPINIONS ON THE NEW EDITION.

'We believe that, all things considered, this will be found to be the best existing English dictionary in one volume. We do not know of any work similar in size and price which can approach it in completeness of vocabulary, variety of information, and general usefulness.'—*Guardian*.

'The most comprehensive and the most useful of its kind.'—*National Observer*.

'A magnificent edition of Webster's immortal Dictionary.'—*Daily Telegraph*.

'A thoroughly practical and useful dictionary.'—*Standard*.

'A special feature of the present book is the lavish use of engravings, which at once illustrate the verbal explanations of technical and scientific terms, and permit them to remain readably brief. It may be enough to refer to the article on "Cross." By the use of the little numbered diagrams we are spared what would have become a treatise, and not a very clear one. . . . We recommend the new Webster to every man of business, every father of a family, every teacher, and almost every student—to everybody, in fact, who is likely to be posed at an unfamiliar or half-understood word or phrase.'—*St. James's Gazette*.

Prospectuses, with Specimen Pages, on application.

London: GEORGE BELL & SONS, York Street, Covent Garden.
